From: "Andrew V. Cook" <candrew@luna.cas.usf.edu>
Message-ID: <01bb6761.357d18a0$91a6f783@candrew>
Source record: 142456

I am new here and am looking for an ST emulator for my PC (Win95).
Suggestions? Freeware would be nice :)

IS this CPX a commercial product, or ist it PD/shareware? How can I
get my hands on it?

>I don't know FlashII, but have you try with another terminal (like Connect or
>Starcall)? Are you sure it can handle such speeds?

Good observation. In my experience, some programs theoretically
capable of handling speeds higher than 9600 perform disappointingly or
not at all at those baud rates.

Gustavo

try the GNU Project's Ghostscript, that should work nicely - you
can also print the files with your existing printer arrangement.
TOAD included Ghostscript on their ATARI COMPENDIUM CD-ROM, as
they'd duplicated the book in .PDF as well as HTML format.

> but it should be about the same speed, as the CaTTamaran.

What is the compatibility of CaTTamaran? Will CaTTamaran work with
NetBSD or Linux? I'm considering installing one of the two on my TT.
Also, I'd very much appreciate if someone could give a non-biased
comparison of NetBSD vs Linux. I'd hate to start a big BSD/Linux
flame war, but I've searched the net and haven't found anything to
convince me which to install. All I found was NetBSD is good is you
want a BSD OS and Linux is good if you want a Posix compliant OS.

Also, anyone using Cubase on the TT030 with CaTTamaran?

I think you can give up on the freeware idea, but you CAN get a free demo of MagicPC. I finally tried it on a Pentium 133 Friday, and it's
very nice at that speed. The demo is limited, but quite usable if you can stand the "Hi, I'm a limited demo!" dialogue every 30 seconds or so.

Ensure you have HSMODEM installed and configured and that your
provider is giving you plain uncompressed SLIP. Then use a comms
program to manually log in, writing down all the details needed. If
you are still stuck use a "capture" facility to save the login details
and post them here.

>Is there such a thing as Compressed Slip for the Atari?

Yes and no. Yes in that Nos will do PPP, CSLIP and SLIP. No in that
STiK only does SLIP atm.

>I want to move to an ISP which is CSLIP only.
>
>Also, is there any PPP/SLIP/CSLIP Email, News, WWW, FTP, IRC etc
>programs

Nos will do email (smtp), news, ftp, telnet. There is also a POP3
version of Nos (somethere!).

All the programs which use STiK will automatically work with PPP and
CSLIP once STiK has been modified to include these protocols. Although
CSLIP is much simpler than PPP and will almost certainly appear before
PPP, things are being reorganised atm so neither is not going to
appear overnight though.

Probably TOS 1.0 or TOS 1.2 - there are programs to check. I can email
some stuff to you if you want but you can get it off the net anyway.

>I didn't get a system disk with the computer.

Just as well - you'd probably format it after a week anyway. :-) It
contains nothing of any importance except the control panel which can
be obtained from the net anyway. The whole operating system is in ROM.

>I have seen various references to different TOS versions in this newsgroup,
>but I'm not sure what version I have.

Most TOS versions are pretty compatible with each other. TOS 1.0 can
be a bit limited and any version less than 1.4 is not recommended for
hard disk use. If you intend to use floppies only then the limitations
will not really affect you - 1/2 Meg of memory will be the major
factor. Keep your fingers crossed it has been upgraded!

Try http://www.umich.edu/~archive then go to the atari/Languages
directory, loads of LISP implementations in there. Or you could get them
via ftp from a nearby umich mirror site.

Acrobat files aren't merely postscript. Since the chances of getting
a version of Acrobat for the ST are probably nil, I'd suggest you look
into 'xpdf', an X windows based PDF reader that can output postscript.

At least that's a start.

Hallo *,

Thorsten Guenther (guenther@cabal.shnet.org) wrote:
: What are you waiting for? PPP is already available for CAB, just install
: MiNTnet.

This sound really good, but for me there is a little problem, that can be summarized in one word: 1040STF (meaning, that i have only one MB RAM).

I remember having tried to install Mint and MintNet using KGMD, but i did not have success with this due to - i think - a lack of RAM. So before i begin to try to install it the hard way (doing it by hand, package for package), i would like to know weather or not it is possible to use Mint, MintNet and CAB for MintNet with - you guessed it - one MB RAM.

Any help would be appreciated,

Holger.

Ghostscript 3.51 and newer will view and print most .PDF files.

It was included on the Atari Compedium CD. Should be ftp-able from one of
the Atari internet sites.

The output is not very good, because the fonts that are available for
Ghostscript are lousy, but they will get the job done.

IIRC you have to send a hangup signal to the ppp-daemon. So at first you need to find out pppd's process ID (look at pppd's extension in U:\proc or use the 'ps' command in a shell). Then use the 'kill' command in order to send the hangup signal: kill -HUP <pppd's ID>. You could also delete pppd's process file from U:\proc which will have almost the same effect, AFAIK.

That's not a bug, it's normal behavior for TCP/IP - that's the "loopback"
address.

Set the linefeeds for automatic translation to LF/CR. Unix systems (e.g.,
most of the systems running as servers on the Internet) routinely use a LF
only, while most VT-100/ANSI terminals require both the linefeed and carriage
return to scroll the text.

That's normal, there's nothing missing at all. IF you want something more in the "Desk" menu, you'll have to boot from a disk with .ACC files on it.

m> I didn't get a system disk with the computer.

You don't need one, although the "Language" disk that was packed in with STs does have the Control Panel accessory and BASIC on it. You can get lots of better BASICs (I like HiSoft, GFA is very popular, and if you want to write games, STOS is very good for that). In place of CONTROL.ACC, you should find XCONTROL on one of the numerous ftp sites.

m> I have seen various references to different TOS versions in this
m> newsgroup, but I'm not sure what version I have.

A nickel says it's either 1.0 or 1.2

m> Lastly, is there a cable that allows a connection to a
m> CGA/EGA RGB monitor?

You cannot use either a CGA or EGA monitor with an ST. They're TTL digitial; the ST is analog, and either the monitor, the computer, or both will be damaged if you try it. I suggest you obtain an Atari SC1224 color monitor, or a multisync that can handle NTSC sync rates (15.75 kHz horizontal). The cable you would likely have to build, if you go the multisync route.

m> I'm really anxious to get this machine up and running, so any help
m> is greatly appreciated.

Flinny, give him your Web address so he can get the plug-and-socket pinouts!

ftp.funet.fi /pub/atari/mint/toswin_b2.tgz

Can probably be found under mint/ or mint/toswin on other
ftp sites holding MiNT stuff.

Here's a readme file from it:

--snip--
Toswin vt100 source code - based on Eric Smith's Toswin 1.4, plus
Warwick
Allison's extensions 1.2.

The modified source adds vt100 and some ANSI escapes to the original vt52
escapes. The escapes that are not provided are the ANSI graphics modes and
key redefinitions and the vt100 alternative character set.

A list of recognised escapes is in tw100.doc.

I have a bunch of Atari ST software/hardware that I tried to sell awhile back, sold some but still have a bunch more.

I'd be willing to donate everything to an Atari Users Group if the group would: pay for the shipping, and give me notice of 501(c) non-profit status (that way I can just write the whole thing off).

Actually I'd be pretty happy to donate the stuff and I think the ACE would benefit. I just don't want to get stuck with shipping and all this STuff will go to waste otherwise.

Aloha,
Baron Sekiya
p.s. Oh yeah, I'm in Hawaii so shipping would be by plane or slow boat, or something similar (unless you're on vaction and want to take home full suitcases).

Here's a list of what I have (I'M NOT GOING TO BREAK IT UP TO SELL, ALL OR NOTHING.):
Item Groups

I just purchased an Atari 520 ST, SF354 and a SM124.
I booted up the ST, and everything works fine. I can access disks in
the SF354 fine, also.
One problem that I have ran across, is there seems to be missing
a few items from my Desk Menu. When I click on it, all I get is
"Desktop Info..", which returns:

GEM, Graphics Environment Manager
TOS

Atari Logo
Copyright 1985.

I didn't get a system disk with the computer.
I have seen various references to different TOS versions in this newsgroup,
but I'm not sure what version I have.

What I want to do with this wonderful machine (I collect, fix up and
like to show off these "obsolete" machines to friends) is mainly
telecommunications, music and graphics.

I have tried to get the FAQ from various FTP/WWW sites with no luck.

Lastly, is there a cable that allows a connection to a
CGA/EGA RGB monitor?

I'm really anxious to get this machine up and running, so any help
is greatly appreciated.

>Is there some kind of viewer around which supports .PDF (Adobe acrobat)
>files, on the ST?

Ghostscript fully supports .PDF files, starting with version 3.53.

It is available in two seperate files. gs353b.zoo for the binaries and

gs353s.zoo for the sources. You can find it at:

ftp lifshitz.ph.utexas.edu

in the directory:

/pub/atari/ghostscript

>suggestions? Thanks in advance.

Yes, I had this problem, too. I don't like a root directory full of single
files. Try these two:

Panther (redirects filetypes -- not just *.acc is possible)
Tcache (mainly a cache-setting program, but has the facility you ask for.)

Both of these do work on a falcon. I'm sorry, but I don't remember where I
got them.... ftp from somewhere, probably umich or hensa or one of many
German sites.

Hope this helps,

change ;-?

> My TT consists of 4mb ST-memory Mighty Mic 32 TT-ram board with 16 Mb of
> 9bit page mode simms and a nova+ (1mb) screen card... TOS is 3.05

1. Get a Super Nova Plus with 4 MB Vram. This will increase your graphic
Power enourmously.

2. Get a speed up device. They should get higher Clock rates for the
CPU. AFAIK there is a Canadian Product called CaTTamaran. It will
provide 48MHz of CPU and FPU Clockrate. I once heared, that there is
a german product called Power Up TT. I don't know anything about it,
but it should be about the same speed, as the CaTTamaran.

This won't give you the speed of a Medusa, or even a Hades, but it makes
the TT a lot faster. If you apply both modifications you will get about
1.5 - 2 the power of before. This does not increase the memory
performance, but the CPU, FPU and very much the graphic. So for memory
intensive Applications better get a Medusa, or a Hades. They both are
better with CPU, FPU and grafic Performance, but the things said shoud
at least increase the TT's Performance.

Christof

Forsythe and Guy wrote:

> Is there such a thing as Compressed Slip for the Atari?
> I want to move to an ISP which is CSLIP only.

No, sorry. AFAIK people are working on it.

> Also, is there any PPP/SLIP/CSLIP Email, News, WWW, FTP, IRC etc programs
> availible? I know about CAB, but that's it.

Use MiNTNet, and for some of the programs GlueStik. Then there is:

Antmail (email)
tin (news)
cab (WWW)
lynx (WWW, Text only)
several FTP and IRC clients. Most of them are ports from Unix, some have
- I think - a grafical User Interface.

If you also usr X11R5 fot MiNT, you can use different X11 toolsfor it.
There is the WWW Browser Chimera and different tools for the other
Internet services.

Chrsitof

PS.: The Programs are independent of the low level Protocoll. they all
use the TCP/IP protocoll suite, which then uses the low level Protocoll.
The only (well, it is a lot to do) thing MiNT Net does is providing an
Interface for the Programs to the Protocoll, So all the Programs cann
use SLIP, PPP or any other Protocoll implemented.

No, this is not normal. HDDRIVER doesn't affect the memory test at all.
It sounds as if you used another program, e. g. BOOTCONF, to switch the memory
test off. Of course you can use such a program to switch it on again.
You can find BOOCONF on acp5.chemie.uni-kl.de/pub/atari/.

Not with CDTOOL but with SCSITOOL/HuSHI or HDDRUTIL/HDDRIVER.
>
> Could someone give me a little more info on this product?

Have a look at http://members.aol.com/norwiecz/index.html.
The most interesting thing is that it's the only one that supports SCSI
initiator identification. You need this in order to use drives like the
Quantum Fireball Series with an ST. Without this features these drives are
not recognized at all.

|> user, and there is a very widespread usage of Magic as a replacement
|> operating system, then there's a very good case to say that Thing should
|> attempt to support it wherever possible.
Thing is not a desktop for MagiC, it's a desktop for SingleTOS, MTOS, N.AES, XaAES, Geneva, and the rest I've forgotten. Thing already supports some special features of MagiC, but I'm not willing to make a MagiC-only-version of it. I'm not willing to make any other -only-version of it, either. Btw, what MagiC-special features are really MagiC-specific and not supported by Thing ATM? You can use the "single-mode", limit a program's memory usage, etc. Multi-threading Thing is the only thing I can think of now, but this is even MagiC-5-specific.

|> [...]
|> but fuller operating system support would be a more obvious priority than
|> extra bells and whistles, wouldn't it?
Well, I must admit that I use a desktop not to access all operating system's features, but to work with my computer. So my priorities are making Thing more convenient and smaller, not more OS-specific.

Ciao

Thomas

: : On Tue, 25 Jun 1996, Ronald J. Hall wrote:

Hey guys...here are a list of things I did until STik, CAB finally worked for me. Who know if any of it really fixed the problem, or if the bugger just finally decided to work *shrug*
Anyway...here goes. (on a stock 1040STe, 4meg, both colour & mono, hard disk)

The first thing I did was make sure my modem was set to NO COMPRESSION at all by entering AT%C0 in the initilization line of the default config. This shouldn't matter really, but it's one of the things I did, and never got around to trying it with compression enabled since it works. I also set STik to ignore DTR and set my modem to ignore it as well. I did this with all of my com software a while back because I found it convient to be able to reboot the computer without the modem hanging; however, if you do set your modem to ignore DTR, you must use a hang up command "ATH0" to get it to hang up.

Next, I dialed into my provider with a regular term program and logged in as if I were going to use slip. I used the groovy capture buffer in my term program to save and print everything that happened during this session. I entered this information into the stik-dialer file according to the directions that came with STik.

Now...after doing this...I found that "sometimes" it would work, and sometimes it wouldn't, yet I found that logging in manualy with a term program, then exiting it enableing STik, and typing in the IP address worked 99% of the time. It seemes as if the STik dialer was picking up the correct IP address, but maybe wasn't writing it to memory, disk, or whatever it does properly. Later, I was playing around with ICE, and found that ICE didn't set the baud rate, and required a CPX, desk accessory, HSMODEM, or some other means to set the port speed...so I installed a simple modem config CPX to my setup. From that day on, STik dials and works perfectly amlost every time...even on horrible net lag sessions. My guess is that when run in some odd ball ST systems, STik doesn't work just right when either initalizeing the com port, and or logging in. Don't know how or why...it just seemed that the CPX fixed it for me.

Now, with CAB...
I found that it majorly helps to totaly clear your WWWCACHE folder
before each new web browsing session. From time to time, my set up seems
to get confused if there is a a bunch of old stuff floating around in the
CHACHE from a week ago. Maybe just a full disk? I dunno, but clearing
out the folder (ALL FILES) always fixes things (sometimes I have to exit
and restart CAB if I clear it after running CAB). Be advised that
using the clear cache option inside CAB doesn't always remove everything
in the cache folder...It'll only remove what the cabcache file says is
in the folder, the rest is invisible to CAB.

The next thing I've found that seemed to help was setting the image
cache to a full 4 meg (since I've that much memory total, set it to
whatever your max ram is). Every since making that change, I rarely ever
get a partial or corrupt jpeg or gif. Also, make sure you have the
jpeg.ovl in CAB's working directory...otherwise it will hang up when trying
to download a page with jpegs (if graphics are enabled) until you hit the
esc key. If you multitask, and find you've run out of memeory when you
try to run something else with CAB, clearing the image cache will release
unused memory back to the pool, so you can try running the second app
again, it just might be enough memory then :)

The disk cache gave me some problems initaly...
Just make sure you don't set it bigger than the space availabe
and you should be fine. In my case, I've set it for 4 meg, keeping
1 meg avalible at all times...but it should run okay in as little as 750K
(probably even less with graphics disabled).

So far, the only part of CAB I can't get working are Mailto: FTP: and
NNTP: I have no idea what a proxy is, and my provider told me I didn't
need any...so I've not a clue as to the magik behind these newer CAB
features unless we're just waiting on an updated CAB.OVL to support
them all. HTTP workes nearly flawlessly for me!!! GFX included.

I've tried this package both under normal TOS/GEM (1.62) and under
Geneva. With the exception of mgftp which will not run under
Geneva (at least I can't figure it out) it works the best, and the
fastet under Geneva with NVDI. It's proven to work equally as well
when used as a prg rather than an acc under geneva (just make sure to
have a stik_cfg.dat file in the same directory as the stik.prg).

I've not been able to get Finger to work at all (only tried once)...
I've not tried IRC...
Telnet works but is terribly slow and I've to log in twice because of
some trash it tosses in on login.
mgftp works fine under normal GEM, but hangs up under Geneva.
I LOVE ANT_MAIL!!! It works!

When running the package under Geneva, I've found that I can use
the SLIP config of NOS side by side with stik as long as they both
don't have open sessions (I disable stik when using nos, or put
nos to sleep when using stik). This comes in handy since the telnet
of NOS is much faster, and offers ftp that will work under Geneva. It

also adds the benifit of grabbing the news!

I know it's frustrating getting the bugger to work...
But once you get it going..WOW!!!

In terms of TCP/IP settings...you can see my config and dialer files
below...

DEFAULT.CFG

```
ALLOCMEM = 250000
SERIALPORT = Modem 1
CDVALID = FALSE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 1006
MSS = 966
PKT_SIZE = 2048
DFB_SIZE = 1024
RCV_WND = 4096
UP_RESPONSE = 2
USERNAME = bjr
HOSTNAME = ebicom.net
FULLNAME = Brian J. Roland
NAMESERVER = 205.218.114.2
```

DIAL.SCR

```
BAUD_RATE = 19200
HANGUP = ATH
PREFIX = ATDT
INIT = AT%C0
CONNECT_WAIT = 35
REDIAL_DELAY = 20
PHONE_NUMBER = 2437065
SUCCESS = CDWAIT
FAILURE = BUSY
FAILURE = NO CARRIER
FAILURE = NO DIALTONE
FIND = EbiCom.net:
RESP = Sbig-bad-puppy-wolf
WAIT = 0
FIND = Password:
RESP = you-didn't-think-I'd-give-you-this?
WAIT = 0
FIND = to
RESP = $GET_IP
WAIT = 0
```

I did have to tweak these TCP parameters a bit to get CAB to work without bombing. All I did was increase the buffer size. I came across the other settings by trying different config files that came with the WWW131 package until one worked. If you get to the point that CAB does start downloading things...but bombs, that's a good sign believe it or not...you simply need to increase the buffer memory (at least it worked for me). I most likely have a much larger buffer than necessary, but I was to lazy to try a nibble at a time til it worked, I just gave it a big chunck and started browsing. If you're patient enough...give it 10 or so bytes at a time till it straightens out for you.

I hope this helps...I don't really know what I was doing...all I know is that after an hour or so of doing the above things...it works.

Brian

54. Annouce: ST News - The Final Issue

--++Begin Forward++--
Hi there!

Some of you may or may not know that "ST News", the Atari ST/TT/Falcon multimedia disk magazine, will quit after Volume 11 Issue 1, to be released at the end of July 1996. That will be *exactly* 10 years after the release of the first issue. If you feel you have some eulogic notes to add, you can mail them to the editor. By the way, the editor now has a new email address. It used to be r.c.karsmakers@stud.let.ruu.nl but now it's changed permanently into cronos@worldaccess.nl. Please make note of that if you ever want to contact "ST News" for whatever reason.

"ST News" as a disk magazine will cease to be, but some of the writings will continue in "Maggie". Also, plans are in the pipeline to do a multimedia WWW magazine. There may also be an "ST News" nostalgia page in the near future! Ideas are welcome, of course.

Cheers!

My all time favorite list goes like this:

Geneva/Neodesk
NVDI
Notator SL
Page Stream
Image Copy CD
XoR
STalker/STeno
WWW131 package
NOS
Atari Works
After Dawn Screen Saver
Super Boot
Card File
Chindex (no practical use for me, but interesting)
Tracker ST
Card File
A lot of the goodies that came with Mark Williams C (although I know no C)
Mint W/Xwin & Chimera(I like puzzles!!! how does this thing work again?)
What was that game I downloaded, played once and erased, oh well, there
are thousands of them :)
That little batch file I wrote to change the number of lines on my Laser
printer from 60 to 66.
The Shareware HD defragger that whiped out four of 6 partitions...
Thank GOD for Diamond Back!
And who could ever forget that crazy Camel game that came on an
"ST Format" Cover disk...what was he smok'in? What was it called?
I also got a kick out of laser chess...very lame game, but the only one
I could ever beat the machine, or an opponent at!

On my list to try is:
Magic
Logic
And someday at least one title from each catagory of the Toad Catalogue...
By then, I might have enough money to buy a 4,000mhz 9,999,986 DX7
with a million meg of ram, a 16.something million color hologram
projector, unlimited laser to diamond chip storage drive, a two
way satellite card with 48 336mhz transponders and 80 someodd 316mhz ku bands,
and the ergonomic head pads that read your thoughts and control your PC from
anywhere in the world (also avalible in really large sunglasses format).
Oh what the heck...might as well get a transporter card, and the holodeck
virtual reality chip.

Brian

56. HELP on MultiSync Monitors for ST!

I have a bit of an Oddity. I have a switch box that hooks upto a MultiSync Monitor that does the Hertz Cycle Rates for both Color and MonoChrome Monitors on the Atari ST, and has a high enough Resolution to handle MonoChrome or Color. 640 x 400 Resolution. Unfortunately, this switch box only supports a standard 9 Pin Connector. I would appreciate feedback on which monitors will handle all this. A 14 inch would be nice, nothing less than a 13 inch screen. List of Makes & Models. Please direct all replies through E-Mail to: bensmith@teleport.com

Well, we should distinguish C and C. There is the traditional C (K&R)
and there is modern C (ANSI). C as a language existed prior to ANSI
and so IMHO diskussions about C as a language should be based on the
traditional aproach.

> Most decent compilers stick to these standards.

I'd like to see a C compiler for DOS, which implements fork() different
than returning -1 :-).

68. Emacs trouble

Newsgroup: comp.sys.atari.st
Date: 1996-07-02 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4ra34i$o7p@dodgson.math.psu.edu>
Source record: 142500

Hi!
Although I have the environment variables correctly set (I know that is the case because otherwise Emacs complains on startup that it cannot find the lisp libraries, etc.), if I want to list options, or use dired, or whatever needs something from the lisp directory, I get a message saying "cannot open dired" (or options or whatever). What could be wrong? This happens both trying to run the program from Gulam or Neodesk/Geneva. Another question: is there a way to run Emacs in a window under Neodesk/Geneva that does not use gnva_tos.prg? The problem is that for some reason window redraws take forever (even using NVDI). All suggestions are welcome.

Gustavo

>Of course as this is the marker in the RFC's for end of message.

No, it's a bug. It shouldn't matter if the message contains the message termination sequence. RFC 821 explains exactly what to do under these circumstances. To save anybody the trouble of looking it up, the sender-SMTP should insert a dot before any message lines which begin with a dot. The receiver-SMTP should remove the first character from any line which begins with a dot, unless it's the only character on the line, in which case it must be the end of the message. This also accounts for the other ICE mail bugs I described (which won't materialise in a straight ICE to ICE transfer).

>>I assume this rule only applies to news articles? In any case, it would

>>"Look what I found in another group"? (Answer: lots.)
>Again I think the guys will come back here saying that the way they
>are doing things is strickly in accordance with the RFC's.

Fair enough, although this feature is distinctly user-unfriendly, which seems at odds with the whole Oasis ethos. It's also Usenet-unfriendly, because people should be encouraged to change the subject line when an article is no longer relevant to the thread it appears in (e.g. this should have been changed to "Oasis 2 bugs" by now). You didn't say whether or not the restriction applies to email too, but if it does, it shouldn't.

Here's another RFC non-compliance bug (unless it's just something peculiar about the way you posted this article) - your References: line was based solely on the previous Message-ID and didn't include backwards references.

70. MIST Atari Show

Newsgroup: comp.sys.atari.st
Date: 1996-07-02 00:00:00 UTC
From: lpursell@bright.net
Message-ID: <836361292_OASIS_@bright.net>
Source record: 142502
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech

This might seem off topic, if so I'm sorry but this is rather important
to me so here goes. I would of posted this in the other Atari news groups
but nobody really reads those.

Is anyone in the Lima or Findlay, Ohio area going to the MIST Atari
show in Indian July 13th?

I'm wanting to go, but my car is unlikely to make it and would like
to know if I could ride with someone else. Forking out some money for
gas in not a problem.

Please e-mail ASAP if a ride to MIST is possible... thanks for listening.

Kyle Farrell wrote:

> What is the compatibility of CaTTamaran? Will CaTTamaran work with
> NetBSD or Linux?

I don't know, but since NetBSD and Linux also run on a powered up Falcon, I don't think, that it could make any problems. For details Roman Hodek is the man coordinating the source of Linux. He can be reached via E-mail at: Roman.Hodek@informatik.uni-erlangen.de. For Net BSD Ther is a Page that I can't find. Perhaps You Know it. There should be an E-mail Adress on it, Where such questions can be asked.

> I'm considering installing one of the two on my TT.

> want a BSD OS and Linux is good if you want a Posix compliant OS.

Well, that is one major point, but it's not all off the difference. If memory is very poor on your machine, you should switch to MiNT. Both of them need AFAIK 4MB at least to run. For X11 8MB is minimum; if you want to ust X11, you should have 16MB. Both of them suport virtual Memory, but every virtual Memory System goes to zero Performance while swaping. MiNT does not suport virtual Memory, but you can work very good with 8MB and X11. The advantage of NetBSD and Linux commpared to MiNT is stability. MiNT is a lot more stable than TOS, but still Linux and Net BSD are a lot more stable than MiNT. I consider Net BSD to be better in this point than Linux, since the sources are in One hand, and everyone send their Patches to them, so they can deside, what makes the way in the distribution. Linux is a bit more Chaotic in the development, but for major Relaeses They seem to do the same. Both of them are one source Tree for all Hardware (For Linux they are working on it, and version 2.0 is said to include x86, 68K, and Alpha Code), and they differ only in the drivers for the special Hardware from the Intel Systems. Concerning Speed I have the feeling, that Linux is slightly better than NetBSD, but I can't proof it.

Hope this helps you a bit. It's realy hard to decide betwen the two. It's mainly a matter of taste. Some people like the BSD Systems beter, others prefer the Posix Systems You can't really say what is better. If you just want to have a Unix Style System MiNT could also be the choice. It is more Modular than Linux and NetBSD, but using all the needed features in MinT to make a similar Systam to NetBSD makes 4MB feel very small. My Falcon with 4MB has about 200-400KB free after I logged in. The differences depend on how many virtual Terminals I configured. Most

of the Time I throw out the Networking services, or some other stuff I don't need at the moment.

74. PC Card for Atari STFM (4 megs)

Newsgroup: comp.sys.atari.st
Date: 1996-07-02 00:00:00 UTC
From: Tim Richardson <richarta@boat.bt.com>
Message-ID: <31D8F556.FC3@boat.bt.com>
Source record: 142506

It is quite a while since I have used my ST, as I have
been using a PC Incompatible. However, I am now interested
in having a PC at home, but have little cash to buy one. I
remember from ages go that there was a PC card available for
the ST. Are they still available? What chip do they use (386, 486?)
Whare can I get one from, and how much are they? Can they
run Windows 3.1 on the Atari?

Would someone please email me a reply?

Thanks

Tim

Not if I have to type it in full somewhere. If I had too I'd probably use a path such as Reports/1996/Annual/Summary or some appropriate variation on that.

Long filenames are no use if not all of your software is able to handle them.

> 126 processes, eh? that'll be good in my 4Mb RAM...
Yeah, not unless you have zillions of Mb of memory. ;) Actually isn't this starting to sound like a PC topic.. as in PCs can do this (even if there is no need for it) :))

> Long filenames? No interest to me, nor any especial benefit AFAICS - a
> feature looking for a use ISTM.
I have to disagree here Harry.. just imagine what you could do..

on your C directory

games\often_played_games\registered_ones\shoot_em_ups\somes_clone_of_doom\
games\often_played_games\unregistered_ones\thinking_ones\etc etc etc

IYSWIM. That is why Freedom is nice.. lets you use long file names under MiNT.. now I suppose it will let you do the same under MagiC.

Now all I need is tons of memory to use all these nice apps. [vbg]

82. WWW FAQ/Help?

Newsgroup: comp.sys.atari.st
Date: 1996-07-02 00:00:00 UTC
From: whitema@vance.cig.mot.com
Message-ID: <4rb6rf$r5f@trotsky.cig.mot.com>
Source record: 142514

Hi all!

Is there an FAQ/Help file for CAB? If not, could someone out there help me? I think I've seen this problem described here before, so sorry if it's a common problem.

Anyway, STiK seems to come up OK (I get an IP address), but CAB/any other application (e.g. Antmail) seem to have problems working with it. For instance, with CAB, I know it's communicating with my provider because it successfully contacts the host and resolves the address. Then I get the infamous "Receiveing 0 bytes" message until it time-outs. If I try to access an illegal web page (e.g. "http://www.garbage.bleah/"), it times-out displaying "Resolving address". Or if I type in an illegal IP address, it times out while displaying "Contacting Host".

I've installed HSMODEM on Modem 2, and I get error free connections to BBSs (which, without HSMODEM, I get lots of dropped characters even at 19.2k). I've removed all TSRs except STiK, the HSMODEM drivers, and my Sang MegaVision (graphics card) drivers. All accessories except STiK and XControl have been removed. I'm using WWW version 1.31.

So my question is "What the heck am I doing wrong?"

Thanks,
Mike

P.S. If it'll help, I can send/post a copy of default.cfg, dial.scr, config.sav, and domain.txt.

>
> >How much memory does the ST have?
>
> ....ehm...only 512k...

Then his only real option is a plain "shell" account using a text-based terminal program (such as Flash). Most Internet Service Providers have
shell accounts (and they usually cost less than "IP" accounts); your friend will og on just like to a BBS, and then enter "pine" or "elm" to
read mail and news, "irc" to enter irc, "ftp" and so on. All the programs are run at the service provider's end, that way, so 512k is enough.

: List of possible bugs discovered in ICE so far:
: ==

: - Fix PPP packet bug where carrier drops.
: - News just stops for no apparant reason, or due to IP bad checksum error.
: - On his TT Neil suffers from:
: - Incoming pop3 mail (cixip) is corrupt - repeated or missed packets.
: - Incoming news keeps stalling with bad packet (IP) errors.
: - Always IP checksum error on 'loging' (note: SB 'logging) in.
: - Several times had error 65 when exiting ICE to Oasis, then crash!

This sounds very close to what has been happening to me. The IP: bad
checksum after I start a SLIP connection or bad packets when a PPP
connection is started. After connecting, the correct IP for the mail and
news servers are returned and sockets seem to be correctly set up for
them. Mail, news and FTP all behave the same way. The socket window
shows SYN sent and the IP:port numbers for each machine. Nothing ever
comes back though. Each time, say the news, is kicked, the socket window
shows the NNTP go to idle then back to SYN Sent, where it sits until kick
news is sent again.

IP lookup does seem to work; it ids micros.hensa.ac.uk as an alias for
mic2-atm.hensa.ac.uk and its IP. I think that is correct.

BTW; I'm using a 4+4 meg TT (14.4k USR modem with HSmodem) connecting to a
Sun host running Tia (The Internet Adapter) SLIP/PPP emulation software.

One question, can Ice/Oasis handle the Van Jacobson(?) header compression
(whatever that is :) for PPP? Tia seems to add it and I haven't found
out how to turn it off.

The only way I could get it working was to put it in the F: drive, in the
directories Tim Gallivan (the author/porter) uses on his system.
Regardless of what the docs say, it won't find the files it needs if you
don't (at least it wouldn't for me). Even setting up the environment
correctly doesn't help.

You can do what I think you mean with MT pro, by selecting the measures
you want (F2 for song editing), and copying those measures to new tracks,
and muting the others.

Steinberg's Pro 24 (precursor of Cubase) will do this sort of thing. I
believe Edit Track will as well.

Ah, bless you, sir! A friend of mine gave me a .S3M file, and I couldn't
find a player until you posted the above. It played the song great!
It's called "The Simpsons", and uses sampled "Doh!"s at different pitches
as some of the notes. It's a real scream! (Pun intended)

Minor nit: Why do so many tracker player coders seem to think their
player is the only program you'll turn your system on for? I don't so
much mind that they take over the whole screen, but it'd be really nice
if they'd let you back to the desktop when you were done, without a
reset. :^(Seems like half these programs I can't find the exit.

After ICE has done it's thing you should select 'quit' from the 'file'
menu OR type 'exit' <return> on the command line; that will return you
to oasis. As long as you have selected 'auto unbatch' in your oasis
configuration you should be able to access your mail and news.

Hi Motorollers :)

Right, this is the third rime I have tried to post this, hopefully this time it'll actually get there (damned Demon :( ).

OK, a while back I saw a post from someone having trouble with Bang and Blast Man running under (I think) TOS 2.06. The problem was that they couldn't get the game to recognise the Joystick or Mouse buttons. This is pretty important as you need to press the fire button to start the game !!!

I'm also having the same problem running it on my Falcon (TOS 4.04) even using Stosfix 3 and the Generic Stosfixer :((

Has anyone got any ideas about the solution ? (Don't say 'Get an ST' ;))
Thanks.

See Ya,
Paz.

Why, is one of the compilers called "Dead Parrot?" Or perhaps "Bolton?"

Try using an external Zmodem protocol - XYZ.TTP and GSZ come to mind.
You can create macros for Uniterm to launch external protocols, I
believe.

The bes way to learn programming, IMHO, is to find some old magazines
with "type-in listings" and do just that. Then modify the code and see
if you can imporve on it.

IOW, do as all successful programmers do - steal from the best!

Well, that statement is absolutely not true. While Flash II does not need
HSModem to work properly, HSModem will *not* "mess up Flash II big-time".
Neither will the Modem CPX.

I sure wish folks wouldn't spread this type of incorrect information
without asking the developer first.

Zan, version 3.6 had so many bugs that almost everyone kept using 3.5 so you may want to look for any code on 3.xx of GFA. There are actually books on GFA 3.xx programming. They tend to be a bit better than looking at code which was not written with teaching in mind.

Will MagiC 4 really do this? I wonder if it use the same long named
files as Windoze 95(either under Gemulator or MagicPC). To be honest, I
hate have to use only 8 letters in a file and use the last 3 only
accoring to the 'guidelines' :P

>Then his only real option is a plain "shell" account using a text-based terminal program
(such as Flash). Most Internet Service Providers have
>shell accounts (and they usually cost less than "IP" accounts); your friend will og on
just like to a BBS, and then enter "pine" or "elm" to
>read mail and news, "irc" to enter irc, "ftp" and so on. All the programs are run at the
service provider's end, that way, so 512k is enough.

Yes thats how I started, you can use the above type of account,
indeed my providor does just that, I used Connect but any normal comms
terminal would do, from there i could read write email , read write
newsgroups, ftp and even browse the internet using lynx?, damm i even
ran my own web page, all this possible on a 520 stfm, if you can get a
providor as good as mine :)
If anyone takes this road then like me you will probably be offered
all your news and email to be downloaded in SOUP format, this is one
ZIP file that is so quick it probably downloads as quick as 2 or 3
emails would :), you can simply unzip this and use a text editor to
assemble your replies, but then you would have to ascii upload them
one at a time, i say this because the SOUP compat OLR's are usually
one meg programs,

At the end of the day, its as I have maintained and tried to get
accross to everyone for the last year or so, (especially the
magazines), a big spec set up and hard drive is better, but you can
use all the internet facilities on a half meg atari with one drive, it
is possible, it definatly is :)

As far as I am aware, stik,telnet ftp and irc etc, the lot bar CAB
will also work on FM with half a meg,

QUESTION? my providor only offers the shell account to local users,
ie: local to airtime int headquarters sort of thing, but have many
pops aroound the country via pipex, so wouldent it be possible to
telnet into the shell acount and have all the above, from your local
pop?

I have both an Atari ST and a Macintosh. There is a program for the Mac
that will convert *many* formats, including Degas and tiny pics. The
program is called Graphics Converter. If you have a friend with Mac, you
can probably get him to convert the pics for you. Most Macs have
software that will allow them to read and write PC disks. Alternately,
Graphics Converter is probably available for the PC also.

>This one's just for fun!
>These are some of my favourite programs; things which helped make the
>ST great. Feel free to post your own favourites; you may have some
>the rest of us haven't heard of.

Mine as followed:

Calamus - a pain to start with, but in the end so good.
Protext - again tricky to use, but very fast
GFA Basic - why can't all program languages be like this ??
NVDI - much needed screen acceleration, on almost any Atari
WWW Package - much needed WWW on the Atari
NOS and Oasis - Not the prettiest of programs (NOS) but multi-session
support and Oasis make a nich package.

Games:

Damocles - I spend _ages_ playing this game, tonnes to do and try
Mercenary 3 - not as good as the above, but pretty neat
Midwinter II - slow(ihs) in places, but great fun
Powermonger - a great strategy game, IMHO better than populus 1 or 2
Civilisation - another game often played, good fun, even if you cheat!
Lemmings 1 - L2 was too slow, but L1 was just right, shame the 2
player version was unfair (controlling with a 'joystick' !!!).

Thats about it really. These are programs I have learned to like,
that I use(d) a lot, and have shaped my Atari use. As for the games,
these are ones I have spent major periods of time playing, and
enjoyed.

ATb.

If you want to change the drive without setting the environment, just patch
the binary. The default PATH strings are easily found - using a binary editor
such as Harlekin - just look for F:\GS.

On this subject, does anyone know of a viewer that can convert Atari-compressed IFF (from Deluxe Paint) into GIF images? I have hundreds of sprites and image components in the format, and I'd like to save them. I don't care if it's freeware or commercial--I just want something to convert 'em by batches.

AHDI makes the brain-dead (IMHO) assumption that if any program reads the bootsector of a hard drive, then the media may have changed. AHDI therefore re-reads the entire FAT.

So, why does NeoDesk read the bootsector of a drive? Simple, it's for the virus check. You can turn this feature off in the Settings->Misc. dialog.

OK smartarse :-)

The effort of entering them once, compared to the time taken on,
and lifetime of, a typical document, is trivial. Especially as a
meaningful name could probably be "cut&paste" from the document title!

>
Ok, I can't solve your problem, but can explain for future reference
to this and other STOS programs,
If STOSFIX 3 does not fix the program, then Generic Fixer will not,
they both use the same code, (well the last version I had they did)

The breakthrough with generic is that the programmer can fix the
program, then release it as working, the user does not have to fix it,
for instance i can make a game, fix it, and it will instantly work on
all tos versions without you the user making any changes, gone are the
days of "not tos206" etc, once fixed with Generic it works on the lot,
instead of having to be fixed for each individual os,

Ok so far...but niether fixers will fix every stos program there are
some commands that will simply not work on other tos versions, the
joystick command is one of them, there are many different ways to
access the joystick from within stos, including easy access to the
twin drivers, but not all can be fixed, its up to the programmer to
know which commands can and cannot be fixed, use the appropriate code
and hey presto? :)
The game in question may be an old one and all this has come to light
since its release, I use the joystick command as an example there are
more, but all can be "got round"
If the source code is available then it can be updated with a little
work, but without that, then you have little chance I am afraid,

Hope this clears the mist a little :)

That's going to leave him very limited because Nos will not run (or even fit) in 1/2 Mb. STiK should work but there will not be enough space for the web browser. He should be able to IRC though.

If he can possibly manage it, he should upgrade to at least 1Mb, more if finances permit - or find a provider that allows connection via a simple comms package. I believe these are known as "shell accounts".

137. Proposal: Wales Atari Group (title to be announced!)

Newsgroup: comp.sys.atari.st
Date: 1996-07-03 00:00:00 UTC
From: "Dr. Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <Dtz62H.I4v@cf.ac.uk>
Source record: 142424
Cross-posted to: comp.sys.atari.st,comp.sys.atari.tech

My colleague and I are considering an Atari user group in the Welsh region of the U.K., although of course atarians outside Wales are encouraged to join. At this stage, we are simply asking for prospective members, i.e. would you be interested in joining, and if so, what would influence your decision and/or what would you like to see in such an activity.
It is hoped that a newsletter will be published to provide a forum for members to discuss current issues in the atari communion, and additionally offer a means of sustaining interest in this field.

I need feedback at this point from you, please email me your suggestions, ideas, indeed anything you would like to see in a user group. All replies will be treated in the strictest of confidence.

Hope to hear from you soon!

p.s. We are interested in users of ALL atari computers, ST, STe, Mega's, Falcon's, TT's (especially!), Medusa, Eagle, Prototype 2001 systems...etc

Regards,

Dr Simon Williams

email: spesgw@cf.ac.uk

138. For sale (UK): Atari STe genlock unit

Newsgroup: comp.sys.atari.st
Date: 1996-07-03 00:00:00 UTC
From: "Dr. Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <Dtz6As.JF8@cf.ac.uk>
Source record: 142425
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Stand-alone genlock unit for the Atari STe (only) computer. Allows mixing and overlay of atari graphics and text on any composite video signal. Adjustable controls for transparency, contrast and colour, also switchable transparent/opaque keying mode. Complete with all leads, psu, manuals and software (including a suite of animation and title software).

Cost ï¿½250, will accept ï¿½100.

If interested, email Simon on spesgw@cf.ac.uk

Note: this will only work on an Atari STe, not an ST!

Simon

Title says it all - the first track cannot be accessed by anything I have (on Atari or PC) there is a CRC error. It's not the copy protection. Could someone give me a copy of this great game - I was looking forward to playing it this holiday.

The game is copy protected, but I don't if it can be overcome by Blitz or anything.
I have the original and would be happy to send proof that I have it - i.e. the enscription on the GOR coin that came with it, or a rubbing of the coin or even the original (slightly kaputt disk).

Many, many grovelling thanks

Dose anyone have a list of where the cryogens in Sundog are (or are they random). I have searched everywhere (including the place MILES away) three times and eventually gave up. I only had one left to go, and I have this bad feeling that I lost one in a space battle - oops!

My favourite game has got to be Dungeon Master. The atmosphere was brilliant - as were the puzzles. Did you know that there was a routine in it to randomly read the disk every now-and-again. This had a great effect when you were coming up to a corner, and the floppy disk whirs and you think "Ah - there's a monster round that corner"!

>correctly doesn't help.

Yes!!! I got it working now, by setting it up on F:\.
I set up a directory there called "gs" with all the Ghostscript stuff in.
It's pretty irritating that you're forced to set it all up in a certain
directory. Oh well, as long as it works- and luckily I had already set up a
partition F:\
By the way, I've got an Ste with TOS 2.06 and 4MB RAM- could the TOS
version have anything to do with all of this since some people apparently
get the environment thing to work?
What kind of a system do you have?

>No, this is not normal. HDDRIVER doesn't affect the memory test at all.
>It sounds as if you used another program, e. g. BOOTCONF, to switch the memory
>test off. Of course you can use such a program to switch it on again.
>You can find BOOCONF on acp5.chemie.uni-kl.de/pub/atari/.

I didn't use BOOTCONF, before a few days ago, I didn't even know it
existed. After installing HDDriver, the memory test was gone...I don't
know what else could have done it.

After another post, I ftp'd BOOTCONF and changed the memory test/whatever
setting to 8 seconds, and now the memory test works fine with HDDriver.
However, now my keyboard is set for Great Britain, and changing it to
USA with BOOTCONF doesn't work...next time I run BOOTCONF, it will be back
at Great Britain.

Any ideas?

I am trying to redo Kermit to its latest version. The last ST Kermit was
Ver. (189) and its now about to be released in version (192).
And that one was only a partial Kermit.
I have Mark Williams C, Ver 3.0.9. I have found and fixed many of
the bugs and incompatibilities in the latest version. The on thing I
Don't have is an alarm function, which is needed for some of the
new routines. I gather there is no standard alarm for the Atari. But some
such MUST have been written somewhere!!!
Can anyone of you BRILLIANT C'ers out there supply one or guide
me as to where one might be found??? Remembering that I am a novice C
programmer, although I have been programming for years in other languages.
Also, I want to put in a VT100 capability, instead of the old
VT52 thats in it now. Suggestions or even sources on that will also be
greatly appreciated.
E-mail any pre-thanked help to

Yes, and TOS 1.2 was never installed in 520's, only Mega's and
some 1040 ST's. It's the original ROM version of TOS 1.0.

> pop?

Seems possible, but that appears to beg the question of using a shell account to begin
with; I have not tried STiK and Telnet on a 520 (my
son's old 520 has recently decided that it's a 260), but Telnet is always slow (it's
apparently to do with the protocol as much as the program
- I work with many platforms, and Telnet is slow on all of them), plus which you would
still have to be able to get uncompressed SLIP to use
STiK. Of course, there's MiNTnet, but in 512k? I don't think so...

I can't speak for anyone else, but I just use the Psychomodem telepathic protocol to /think/ the filenames into the Win95 box at the office.
<G>

Seriously, you have to type the filename /once/, when you create the file, no matter if you're using CP/M's 8.3 or any long filename system.
After that, your file selector should be the only issue - can it handle long names? If not, get a new FS.

If they are Atari SC1224 amd SM124 monitors, there's no difference apart from the power supply (and national safety certifications - it's UL in
the USA, I have no idea what Her Majesty wants on electrical appliances). All of the video circuitry is identical. My son (one of 4, BTW) has
a UK Mega 2 ST, and it works just fine with his US-spec SC1224. He loves the UK keyboard layout, BTW.

Another point - mains power here is 110 to 120 VAC; any monitors that are wired for 220 were not made for the US market.

For me at least, Stalker works quite well for this sort of thing. (A shell sccount which I have). With Steno, e-mails and postings are no problem and I have Selectric to move files without leaving the program and breakout game to play while downloading.

If you are going to use IRC, then you should also get Miniterm which gives you full-screen VT100. 'Cause somehow, Stalker won't let you see the last line on the bottom.

For shareware, then Connect will do with all the stuff I describe above. You need a hard drive just to decompact the thing though...

You should find a thing to hook US applicances to the UK power outlets,
we have something like that in the States. Check a local electronics
store on that.

As for the vertical sync, the monitor should handle that with no
problems. I use it to play European games in 50Hz and it looks cool with
the borders removed. With the boarders though, it looks squashed
compaired to 60Hz. Hope this helps...

Eric Noss

Nearly? <G> I suppose, if "spot on" is synonymous with "nearly," I would have to agree. Of
course, I'm the boob who posted the "I can't get
it" on the same day I went and got it another way.

I must say Demon has some really /S-L-O-W/ connects, even on a T-1 line.

No, Dave, 1.0 was the first one in ROM. 1.05 was, AFAIK, never released; the last released version on disk was 0.96, and the next after 1.0
was variously know as either 1.2 or 1.02 (depending on the numbering system in use at the moment). The best version for pre-2.0x is 1.04 (aka
1.4), which actually is relatively speedy on hard disk access.

h> it working some time ago, but it doesn't seem to work properly now. I
h> can't understand what I've done wrong since I've set up the environment
h> properly, but it still can't seem to find the proper initialization
h> files... any ideas? Anything special I should keep in mind?
It's hard-wired to be run from one specific partition, I: in a partition GS
IIRC. You need to use a file editor to change it if you want to run it from
elsewhere.

I got it running fine from drive H, but went back to a previous version when
I discovered that it would not handle some PS files that were perfectly OK
before.

Speak to 'ya later!

It can be Blitz copied. I don't have my Blitz box unpacked ATM, however. Anyone else?

Ah, I am in possession of a 520STfm with TOS 1.02/1.2; it has been upgraded to 1 meg, but
arrived as 512k.

* Amiga CD-ROM games software compatible with any
CD-ROM system = CDTV/CD32/other CD-games that works
with e.g. SCSI drive equipped OCS/ECS/AGA -machne.
(A=all machines,AGA=AGA machines)

The Labyrinth of Time - EOA A Pinball Fantasies CD32 - 21st C. AGA
Liberation - Mindscape A Superfrog - Team 17 A
Syndicate A?

* CD32/CDTV/CD-ROM titles compatible with Amiga Zappo/Overdrive
PCMCIA CD-drive, that is able to emulate CD32 on A1200.

CDS THAT DO WORK:
Arcade Pool, Banshee, Beavers, Brutal Sports Football, Bubba 'n' Stix,
Bubble & Squeak, Castles II, Chambers of Shaolin, Chaos Engine,
D/Generation, Deep Core, Disposable Hero, Donk, F-17, Fire & Ice,
Fly Harder, Fu)ry of the Furries, Guardian, Gunship 2000, Heimdall 2,
Humans I + II, International Karate, James Pond 2, John Barnes European
Football, Labyrinth of Time, Legacy of Sorasil, Lemmings CD32,
Liberation, Lunar-C, Mean Arenas, Microcosm, Morph, Naughty Ones,
Nick Faldo's Championship Golf, Overkill, Pinball Fantasies,
Ryder Cup Golf, Seek and Destroy, Sensible Soccer International,
Seven Gates of Jambala, Sleepwalker, Striker, Summer Olympix,
SuperFrog, Super Methane Brothers, Surf Ninjas, Total Carnage, Trolls,
UFO: Enemy Unknown, Ultimate Body Blows, Whales Voyage, Zool I&II
Syndicate

CDS THAT DO NOT WORK!
Alfred Chicken, Brian The Lion, Cannon Fodder, Chuck Rock I+II,
Dennis, Impossible Mission 2049, James Pond 3, Lost Vikings,
Manchester United, Nigel Mansell's World Championship,
Pirates! Gold, Project X, Sabre Team, Sensible Soccer,
Simon The Sorcerer, Shadow Fighter

Anything else you want to be listed? Just suggest it to me,
but if I like it, then _be prepared_ to give me a healthy
collection of names for it.

Help needed with Atari ST/Falcon software. Many of titles
above exist for it too, but I have no information which
include modem/cable options on ST versions too. Therefore,
I shall not mention ST on them, unless I have clear
verification from an ST user.

Want to help me with the lists? I could use someone
with co-author, collecting software titles for those lists
with me, so the updates would be more complete and
happen more often. Co-author MUST have E-Mail.

All lists are updated more or less regularly, depending how often
I come across new list-worthy items myself, or anyone cares to
report them to me. I can be contacted at several sources:

!! E-Mail: jkauppin@muikku.jmp.fi !!

IRC: "Grendel-B" (#Amiga, #C-64)
MikroBITTI BBS "MBnet" as "Jukka Kauppinen"

Internetters : PLEASE USE E-MAIL!

Please be active and report any mistakes and additions. I can't personally find everything, but would like very much help the computer community and games freaks with as complete list as possible.

This list is freely distributable, and I encourage everyone to do so - but please also mention the Version-number. Suggested filename : GGLxx.* (LZH or TXT, please). xx for version number, like GGL21.TXT. Thanks!

Oh, yes. Sorry, I wasn't paying attention - hadn't noticed the "gateway" bit
there.

Holiday?! Hmm, yes, I had one of those once. Anyway, it wasn't entirely
unfair, as Dave did reply to the email I sent him about it.

>Daron maintains the comment list. If you want to make sure a bug gets
>mentioned on the list then send a report to Daron.

Although Daron previously said I should mail ICE bug reports to Dave..
Seems more like a matter for developer/beta tester co-ordination, although
as you say, there's not much Dave could have done in this particular case
if he was partying the nights away in Magaluf.

Yes, but it should be my loopback address and not get routed straight to
the gateway like everything else. An Atari running ICE is currently the
only TCP/IP box I have ever seen which didn't think 127.0.0.1 was itself.
If ICE had a loopback interface, it would make testing SMTP etc. so much
easier (when telnet arrives).

In fact many trackers have not a quit button, but a quit pixel. Which
one is normalized in RFC 1425. And Graoumf tracker is compliant with the
RFCs, so his quit pixel has coordinates 0,0. Top left. ;-)

No, never... even with ZIP files coming from other systems (Amiga,
PC). Perhaps you have another problem? Something like the Falcon SCSI bug.
Do you CRC check your ZIP files on the Falcon on a SCSI disc? Try from a
floppy coming from the STe...

185. Problems formatting hard disk

Newsgroup: comp.sys.atari.st
Date: 1996-07-04 00:00:00 UTC
From: jules@cs.ruu.nl
Message-ID: <4rg4dq$bgh@krant.cs.ruu.nl>
Source record: 142366

Hi,

I just got a--admittedly rather old--640 MB SCSI hard disk and would like to hook this up to my MegaSTe4. Problem is, I can't get it to format and/or partition the disk.

If I try to partition it, both HDX 5.0 and 5.04 will complain that it has been formatted by an older version of HDX and I need to reformat it--which makes sense. However when I try that, the program will correctly identify the disk (something like CDC-????-??) but when I click `Ok' it complains that it can't format unit 0 and I should check connections and such.

Using HDX 3.1 (I think; might be 3.01) I get the message that this disk is not supported and I shd get a new WINCAP file. I *can* successfully format and partition it as a SH204 though, which gives me 16 MB--not a very good deal :(.

Any ideas?

Thanks,

-- Jules

Well Van Jacobson header compression is used in CSLIP - "which performs
the so-called Van Jacobson header compression on outgoing IP packets -
according to the Linux Networks Administrators Guide. It is apparently
described in RFC 1441.

They will work fine if you get the voltage converted. We ran one for some time until someone plugged it directly into the 240V!
The sync. frequencies are generated by internal circuitry that's not dependant on the supply frequency, otherwise the frequencies would shift when the supply wandered and believe me, over here it goes up and down significantly.

> I am new here and am looking for an ST emulator for my PC (Win95).
> Suggestions? Freeware would be nice :)

There is a pretty good free emulator as long as you have Unix (in your case you probably havn't) and a TOS image (which you can get from an ST - although it musn't be used in two places at once for legal reasons) called STonX. There is also MagicPC which is pretty new and so not much is really known about how good it is. I tried out the demo on my 120MHz 16MB PC and I couldn't try much out. It seems to run quickly, although the screen updates are slow. There is also an emulator called GEMulator4 which has been around for quite a while and is probably the best one, although I have this strange feeling that the author of it will reply to this thread.

I currently use STonX and I am impressed with it, but havn't used it much.

>correctly doesn't help.

When using Ghostscript (3.53) I boot with as little as possible (it uses
up *lots* of memory). At the end of my STGS.RC file, I have the
following:
setenv GS_OPTIONS=-dNOPAUSE -r300
setenv GS_DEVICE=cdj500
setenv GS_HELPDIR=D:\GS\HELP
setenv GS_LIB=D:\GS\PS,D:\GS\FONTS,D:\GS\HELP

If these lines are commented out, then the program says it can't find
gs_init.ps.
However, the dialog boxes for setting the resolution etc. are not changed.
A bit of bug fixing required IMHO. It is a good conversion though (setting
up aside). Hope this helps.

Hi,
I urgently need the resistace of the terminator packs of a Quantum 127 ELS.
The terminators are the two long multipin narrow thingies that are just
parallel to the 50pin SCSI port of the HD.
If you happen to have one (even the 240 and the 340), I would really
appreciate it if you could read off the resistance (or the whole label)
and let me know.
Thank you in advance,

Nima
P.S. I wonder if all drives have the same resistance for their terminators?

: : Hi all I need some help with Freeze Dried!
: : I need to know how to fix the s/w or the modem to be able to have text
: : scroll on the screen! When I'm in IRC I can only see one line at a time
: : and it does not scroll up the screen!

Ok this is a very simple thing to fix.....it just depends on what type
of shell your account has....

All you need to do is change the emulation IN YOUR UNIX ACCOUNT, not
your copy of fzdt.

if you are using a csh or a tcsh (C or T shell's) you need to
type in a command at the unix prompt.....

set term=ansi

this will change the emulation to ANSI and you can now go on IRC and
use it as normal......to change back to vt100 use the same command
but instead of ansi use vt100

now if you are using either the sh or the bash (Bourne or Bourne Again
shells) the command you need to type is.........

'term=ansi' for ANSI emulation and 'term=vt100' to return back to vt100.

I use fzdt for everything on the net ('cept looking at pics on the www of
course!) and i can view everything ok using unix's vt100 emulation,
the only thing i have come across that i need to change the emulation
to ANSI is IRC. Follow these instructions and i "guarantee" you won't
go wrong......(if you are using the above shells, i've never used the
Korn shell so i cant comment on that one).

The only thing you will find when using irc and fzdt is that if you go
into your capture buffer you wont see any of the conversations because
of the "long lines" that unix uses....but thats another story!

Hope this helps!

I don't think Freeze Dried Term works in IRC. I could never get it to
work. You need a terminal program with good VT100 emulation.

Paul, I would have preferred to tell you this in email, but there was no
valid email address in your message.

Unless the Aussie dollar is running about 45 cents to the US dollar, that
price is far too high. Used Falcons with 4megs and either 65 or 85 meg
drives are selling for somewhere in the neighborhood of US$450 these days.

200. Solution for GS! (was Re: viewer for .PDF files on

Newsgroup: comp.sys.atari.st
Date: 1996-07-04 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <31db0da0824d731@sn.no>
Source record: 142381

I got it working, and I got it to view .PDF files!
I'm talking about Ghostscript ofcourse.
The bad news is that I only got it to work from partition F:\ on my
harddisk like someone else pointed out to me here.

Anyway, it's set up as F:\gs\
It seems to ignore any environment variables on my system.
So, the problem's been solved- so far (but it sure would be nice to be able
to set it up on any drive/partition/folder/)- someone suggested I use a
binary editor like Harlekin, but I'm not much into stuff like that, and
I'll probably mess up the whole thing instead :-(so I'll just leave it on
partition F:\ as it is.

201. Ghostscript

Newsgroup: comp.sys.atari.st
Date: 1996-07-04 00:00:00 UTC
From: bh@okcforum.osrhe.edu
Message-ID: <4rgvqj$9f2@frazier.uoknor.edu>
Source record: 142382

Setting up Ghostscript:

If your installation corresponds to the default path, you need
not worry about any environment variables. If the directories
used in your installation do not correspond to the default
path, you will want to set up your computer to automatically
define GS_LIB to be a COMMA separated path (corresponding to
your setup) for Ghostscript to search.

Like this:

GS_LIB=.,X:\gs\help,Y:\gs\ps,Z:\gs,Z:\gs\fonts

(X, Y, and Z can be any drive, where the files are located)

If the GS_LIB variable is not set, GS searches a default path of
".,f:\gs\help,f:\gs\ps,f:\gs,f:\gs\fonts".

When GS needs a file, it first looks in the current
directory (.), then in f:\gs\help, then in f:\gs\ps,
f:\gs\fonts, and finally in f:\gs.

The default Ghostscript installation is as follows:

f:\gs GS source and executable,
f:\gs\ps GS PostScript support files and
other PostScript source (pictures),
f:\gs\fonts GS fonts and the fontmap file,
f:\gs\help GS ASCII and PostScript help files.

Optionally, the path to the help files may be specified
separately in the environment variable GS_HELPDIR.

>
>Boris, are you trying to sound the console bell, or did you have something else in mind?
>
NONONONO! There is a function alarm_ used to signal between processes on
multitasking machines, but apparently not on the atari, that is started
with a 'time' in seconds, after which it times out, and informs the process
not to wait any longer. Since GEM is not multitasking, that doesn't work.
so I need a function to do the same thing.

You may be right that a book could be better than just any old code.
But I am of the opinion that the best way to learn and master a
language is indeed to look at other people's code. You certainly can
learn from the books, but I'd rather just sit down with the language
reference manual and some actual code.

Immediately diving into a huge and multifaceted project in the
language usually seems to help, too (grin). It forces you to know how
to do hundreds of little things in this new unfamiliar language--and
you'll learn them well because you actually need to do them right
there and then.

Good luck either way, Zan.

211. WAUG - Ann Arbor, MICHIGAN

Newsgroup: comp.sys.atari.st
Date: 1996-07-04 00:00:00 UTC
From: molin@cxc1.cl.msu.edu
Message-ID: <4rhesr$1dl@cxc1.cl.msu.edu>
Source record: 142392

The July meeting of WAUG will feature a discussion of how to create your very own home page and writing HTML. Visitors are welcome!

WAUG -- (Formerly 'The Washtenaw Atari Users Group')
(Now known simply as "WAUG")

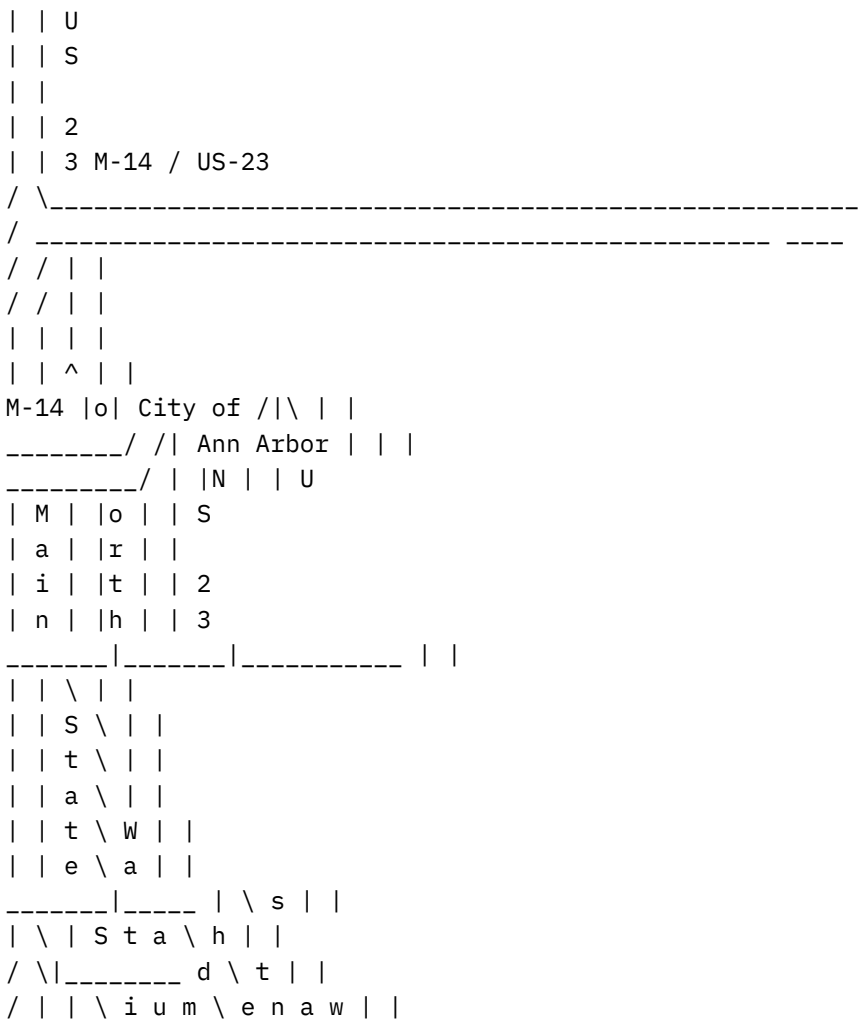
What is WAUG? Over 12 years ago a few intrepid individuals decided to
============= start meeting regularly to share their enthusiasm and knowledge of computers and related hardware/software items. In June of 1987, after more than two years of unorganized and informal meetings, the members developed and formally accepted a club charter. Thus WAUG was born! Helping people get the most out of their computer is WAUG's purpose.

Initially, the club was dominated by Atari afficionados, however in June of '95 the executive board arranged to expand the club's resources to include IBM and Macintosh users. WAUG is an ideal place to meet with other persons who share your interests and to find answers to your questions about using your computer -- no matter what machine you own, how old it is, or your level of expertise.

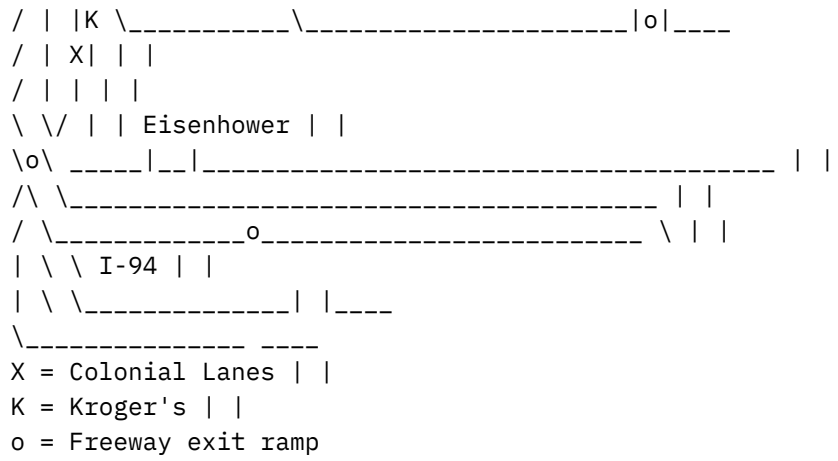
Who's involved? Since its inception, members from cities outside Ann
================ Arbor (including Westland, Canton, Livonia, Milford, New Hudson, Dearborn, Hartford, and even as far away as Toledo) have regularly attended the meetings. Some members live as far away as central Michigan, and one member lived in Montana (!) and joined simply because he enjoyed receiving our newsletter.

How do I join? Membership in WAUG has only one requirement: an active
============== interest in personal computers. Annual dues are $15, for which the member receives free monthly issues of the club newsletter, opportunites to win valuable door prizes, and reduced rates on disks purchased from the club's Public Domain/Shareware disk libraries.

What will I find? A different topic is featured each month: Printers,
================= Education, Telecomm & the Internet, Beginners Woes, Desktop Publishing, Scanners, Swap Night, MIDI & Music, and Utilities are typical examples of what you'll find when you visit WAUG. Drawings for door prizes take place at every meeting, and the annual Christmas Party Meeting is not to be missed. There is no dress code in effect at any of the WAUG meetings -- tuxedos and ballroom gowns are perfectly acceptable. (However if you choose to wear these, we WILL stare at you!)



How to contact WAUG:
==========



WAUG
14 Payeur
Ann Arbor, MI
48108

Voice: 313/971-8576
Modem: 313/971-6035
E-Mail: molin@atari.archive.umich.edu
harvey@mail.ic.net
WWW: http://ic.net/~harvey/waug.htm/

or just show up at any regular monthly meeting! Visitors are
welcome and we promise not to pressure you to join until we've seen your
face at least three times!

Where does WAUG meet? Meetings are held regularly on the second Tuesday
========== of each month at Colonial Lanes located on South
South Industrial St. (across from Kroger) between
Stadium and Eisenhower streets. Meetings start at 7:30pm and usually run
to approximately 10:00pm.

Travelling on US-23: exit onto westbound Washtenaw
(northbound) stay left at Stadium
turn south onto South Industrial

Travelling on US-23: follow M-14 West "To Ann Arbor"
(southbound) exit onto southbound Main Street
turn east onto Stadium
turn south onto South Industrial

Travelling on I-94: exit onto northbound State Street
turn east onto Eisenhower
turn north onto South Industrial.

If you're porting from UNIX, it would seem likely that the necessary
function(s) are in the MiNT libraries. Grab them and see; if you're not
into digging through mounds of C code and/or recompiling the libraries
for MWC, you could simply write a dummy function. The dummy function
could simply do nothing, or possibly have a short delay.

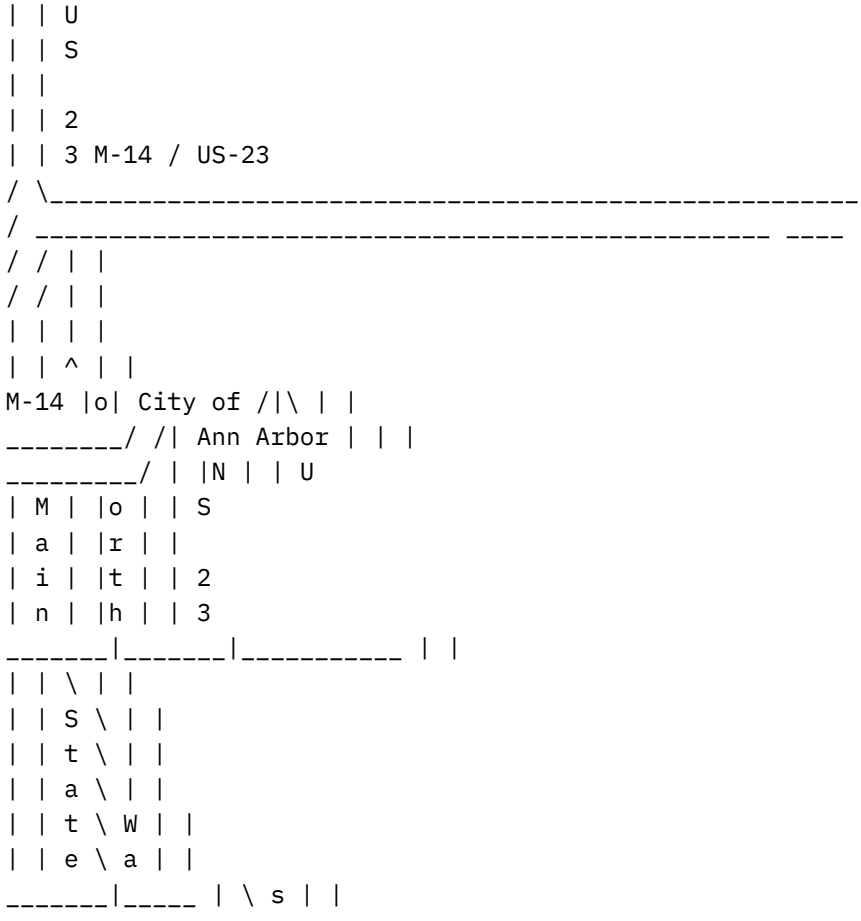
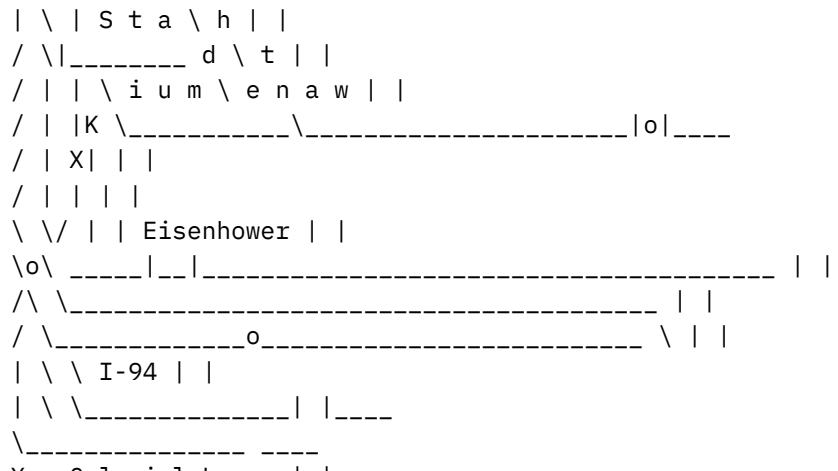
What will I find? A different topic is featured each month: Printers,
================= Education, Telecomm & the Internet, Beginners Woes, Desktop Publishing, Scanners, Swap Night, MIDI & Music, and Utilities are typical examples of what you'll find when you visit WAUG. Drawings for door prizes take place at every meeting, and the annual Christmas Party Meeting is not to be missed. There is no dress code in effect at any of the WAUG meetings -- tuxedos and ballroom gowns are perfectly acceptable. (However if you choose to wear these, we

WILL stare at you!)



How to contact WAUG:
====================



WAUG
14 Payeur
Ann Arbor, MI
48108

Voice: 313/971-8576
Modem: 313/971-6035
E-Mail: molin@atari.archive.umich.edu
harvey@mail.ic.net
WWW: http://ic.net/~harvey/waug.htm/

or just show up at any regular monthly meeting! Visitors are
welcome and we promise not to pressure you to join until we've seen your
face at least three times!

Where does WAUG meet? Meetings are held regularly on the second Tuesday
====================== of each month at Colonial Lanes located on South
South Industrial St. (across from Kroger) between
Stadium and Eisenhower streets. Meetings start at 7:30pm and usually run
to approximately 10:00pm.

X = Colonial Lanes | |
K = Kroger's | |
o = Freeway exit ramp

Travelling on US-23: exit onto westbound Washtenaw
(northbound) stay left at Stadium
turn south onto South Industrial

Travelling on US-23: follow M-14 West "To Ann Arbor"
(southbound) exit onto southbound Main Street
turn east onto Stadium
turn south onto South Industrial

Travelling on I-94: exit onto northbound State Street
turn east onto Eisenhower
turn north onto South Industrial.

If you look in the Lexicon under Dosound() you should find your
answer, complete with an example. You will see that rather than a
programming problem, you are looking for someone with experience of
the soundchip. At a push, the example in the lexicon could be put to
work in the meantime.

218. Extracting 'Text' from CAB

Newsgroup: comp.sys.atari.st
Date: 1996-07-04 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <56144916_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 142399

Does anyone know if it is possible to 'copy' a page of text from a web page displayed in CAB to a text file? ie. to the clipboard.

CAB doesn't seem to have a 'copy/paste' type facility. Which is a shame.

Is there a program that I could run over the .htm file to strip out the html commands but leave the actual content in a readable form?

Thanks, Gary.

This probably belongs in c.s.a.p, but still...

Since there is no multitasking, I don't think I quite grasp what you want to
do here. You just want to start a timer and then do something when it times
out? (I gather it should run in the background and everything normal contiues
in the foreground, but I'm not real sure about that either.)

It is ok. I work with it since a long time ago... But the 3.5 is better to
find out "Bombs-Errors" cause GFA give you an Alert with some infos about
the Crash. 3.6tt only crashes in this moment...

>_product_. So while I don't mind you doing this, I can understand
>the arguments of those who do... :) :) :) :)

Just take a look at my header.... the line there before Lines, says:

X-Newsreader: OASIS Daily Net (Atari) v1.35E

There's also a line for 'organisation' which on your original post was
about 80chars long.

I'm not saying there is no need for this, indeed RFC's (I think) allow
for the inclusion of this sometimes (useful) data.

I'm not 1006n the following, but from what I understand the program
that is adding the offending lines, is written by Rich Tietjens, and
is used by him at his BBS, I think it takes posts from those using the
BBS, and adds the data needed to post globally (ie. to the internet).

If this is the case, the only person who would see the credits if they
were placed in the program, and not the articles, would be the author,
Rich Tietjens (does he really need reminding about the articles).

As for having to read this line each time.... why ??? I know for sure
that in my news reader, I only read down as far as I need to, Ie. If I
don't want to read any sig, or extra data, I don't scroll down that
far.

If you really object to sigs and the like, then maybe you would
consider not posting to any newsgroups at all, on the grounds that you
would save bandwidth ?

Personally I'm much in favour of sigs (why else do I stick one at the
end ???).

For me its a way of including information:

* my email address (not _really_ needed, but RFC's recomend that you
include your email address somewhere as well as the header, as this
occasionally gets removed.

* The fact that I have a PGP key, and so people can correspond
securely with me if needed.

* Where Skyduel can be downloaded, and briefly how good it is. This
has povoked numerous requests from people wanting to know if its
available from other FTP sites (more local) and what sort of game it
is, etc. etc.

The last point is _blantent_ advertising. But then the product is
free to download, and is 1006n-crippled shareware, indeed
registering the game (which personally I get no money from, all goes
to someone else :( ) gets you only a disk with someother stuff we
wrote on. Without this sort of coverage there would be many people
who wouldn't know/have this game.

In the same way that we discuss here the merits of programs and other
games, I am simply providing a reminder/prompt... rather than every
now and again asking people what they think of the game (which would
be a bit un-subtle) I do this instead !

Date: 1996-07-05 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <836685170_OASIS_@phil4.demon.co.uk>
Source record: 142207

In article <551240321.110483.1.starship@3rdplanet.com>
starship@3rdplanet.com (Rich Tietjens) said:-

>MagicPC is useful. It's dog-slow on a 486DX2/66, but it's no worse than
>WIN3.x on any 386, and it's a LOT prettier.

I intially thought MagicPC was quiet fast, with maybe a slow screen update/screen redraw problem (possibly linked with the demo), as a few programs I had tried (inc Gembench and MIPS2) suggested it was about the same as a TT, on my P120.

However as Darek pointed out the 200Hz timer which these programs use has been altered, and in the MagicPC demo I tried this timer was wrong. If I actually timed a period of say 10 seconds using a stopwatch, and used a GFA program of my own to find out how long it was according to the 200Hz timer.

The 200Hz timer reported a time of about 10 seconds, which on the stopwatch was more like 20 seconds.

This means that programs, such as Gembench report the emulator to be faster than it really is.

>I have been using the demo on
>and off at work for a couple of weeks now - anything that will fit onto a
>1.44 floppy can be imported, so I installed Freedom file slector (also Demo
>version) and a few other items.

I've tried some other stuff, but the really slow screen redraw, coupled with it apparently not being much faster than a bog standard ST, means that I'd rather stick with my MegaSTE, its faster for one, and will run as it uses TOS, almost _all_ programs, GEMed or otherwise.

>That "Hi, have fun with our MagicPC Demo"
>popup every minute or so (it's supposed to be 2 minutes, but that was NEVER 2
>minutes!) is annoying, but I think it's supposed to be.
It pops up about every 1 minute.... and the program will only run for about 15 minutes..... this is how a demo is supposed to be.

However as everything appears to go _so_ slowly.... I'll stick to a real ST.

>
>MagicPC works. Run it on a Pentium/133 or faster and it will be quite as
>nice as a Falcon, I think.

Maybe a P133 is much faster than a P120 ?? maybe there is something I am missing, or some differences (a later version). But my experience is that MagicPC runs at somewhere close to a bog standard 8Mhz ST, and certainly not anywhere near that of a Falcon. Besides its missing a DSP chip, which means you cannot run anything that would need this (eg. Apex, Bad mood (but if you've got a PC you've got the original Doom), and most Sampling and mod playing programs).

>However, the dialog boxes for setting the resolution etc. are not changed.
>A bit of bug fixing required IMHO. It is a good conversion though (setting
>up aside). Hope this helps.

Hmmm.. this is what my "stgs.rc" file looks like regarding the variables:

setenv GS_LIB=D:\misc\software\ghostscr\ps,D:\misc\software\ghostscr\fonts
setenv GS_HELPDIR=D:\misc\software\ghostscr\help
setenv TEMP=C:\tmp\

It *should* work in my opinion, and in addition to that I have the
environment variables set up from the 'environ.dat' file (belonging to
'environ.prg' in the AUTO folder):

TEMP=C:\tmp\
TMPDIR=C:\tmp\
GS_LIB=S:\misc\software\ghostscr\ps,D:\misc\software\ghostscr\fonts
GS_HELPDIR=D:\misc\software\ghostscr\help
SHELL=D:\misc\software\gulam\gu\gulam.prg
HOME=D:\

Anyway, GS seems to ignore all of this- because it seems to work perfectly
now that I've installed it on F:\gs\
(according to the environment stuff above it shouldn't work at all on F:\)
This sure puzzles me when some people tell me that they have it working
just fine without doing any binary editing...

I've been using a program called 'Okami' which among other things supports
the SOUP standard (Simple Offline Usenet Packets). It's a very powerful and
user friendly program, although setting it up can be a pain (but I can help
you there).
Just check with your provider first if the SOUP standard is supported.

I thought it would... perhaps not, but I had a look in the Connect manual
and since it said nothing about memory requirements I took it for granted
that it would work on any machine.

>Someone else suggested hacking the binary :)

Yeah, I guess hacking is the only way to go about if you don't want to
install it as F:\gs\

By the way, I did try to edit 'gs.gtp' (this is the file he was talking
about, right?)- I tried to import it into 'Edith 1.22' since there's a
"binary edit" thingy there. But the file was apparently too big (the
computer's not the limit since my STe's expanded to 4 Mbytes).
Harlekin was suggested, but are there any PD/shareware editors around that
handle binary data? I want to have a go at this.

- Highlights -

Atari Lynx games section!
Moniterm 19" 1280x1024 monitor, with graphics card for ST!
Super cheap full-page scanner!
Syquest 44mb removable-platter hard drive, and 10 cartridges!
Some of the best games ever written for the ST, including descriptions!

Below are a bunch of ST items I want to sell or trade. For buyers, highest reasonable offer gets the item, with preference going to those that buy more than one item. Shipping will be negotiated with the offer.

As for trades, let me know what you have and we may be able to work something out. Cash can make up for deficient trade material from either party. Shipping will be negotiated with the trade (though for trades, I often suggest that both parties eat the shipping). Don't be shy, send me some email and let me know what you have to trade.

With respect to trades (or outright purchases by me), I'm particularly interested the following items. Please email me if you have any available.

1. Lynx systems, games, accessories (see Lynx section below).
2. Jaguar systems, games, accessories.
4. Laserdisc player.

So, maybe you see something you want, but you don't have any money and no extra computer stuff to trade? Well, you still might have some trade items I'd be interested in! I'm into home/car audio products, video and laserdisk stuff, PC computer thingies, radio scanners, high quality power tools, firearm and other weaponry stuff, Nokia 232 cel phone accessories, digital and alphanumeric pagers, headset and 900mHz cordless telephones, and NordicTrak exercise machines.

I might consider other carts, so please let me know what you have.

All of the items below are original commercial products owned by me. Unless otherwise noted, all original boxes, manuals, and disks are included. I have cheats for some of the games, and will include them with the sale/trade.

PLEASE MAKE ALL REPLIES VIA EMAIL.

****Lynx****

I have these available for trade or sale:

Blue Lightning (both flat and curved cart types available) Electrocop,
Gates of Zendocon, Pinball Jam, Steel Talons, Joust, Shanghai,
Todd's Adventures in Slime World.

I am definitely looking for the following Lynx carts:

Checkered Flag, Fidelity Ultimate Chess Challenge, Lynx Casino, Power Factor,
Rampage, T-Tris, Warbirds, Zarlor Mercenary.

I might consider other carts, so please let me know what you have.

****Hardware****

Moniterm 19" 1280x1024 paper-white monochrome display, absolutely the best
way to do DTP (and just about any other kind of serious work) on
the ST. Comes with the special video card that plugs into the
Megabus on MegaST machines, plus software drivers. Case is cracked
in a couple of places, but still perfectly functional. Requires
TOS 1.4 or higher. Virtually all "serious" software supports the
higher resolutions without modification (all GEM compliant programs
are supposed to check, and most do). The desktop is HUGE, equivalent
to slightly more than 4 normal monochrome displays. For DTP users,
you can see two full 8x11 pages side-by-side at actual size. The
display is sharp and easy on the eyes, like a well-adjusted SM124.
Shipping costs would be nontrivial on this item, as it weighs a ton.
This is definitely "poweruser" material. Unless you have some sort
of custom graphics card, you MUST have a MegaST machine (not MegaSTE)
for the included graphics card to work (of course, I happen to
have.... :-).

Mega2ST, mint condition, 2mb RAM, TOS 1.2 installed, has internal Megabus
connector for Moniterm video card described above, detachable
keyboard, original box and docs included. I'll also throw in a
really nice keyboard drawer/computer stand made of teak wood (not
some cheesy veneer, solid teak). It is sized perfectly for the
MegaST keyboard.

Img Scan, optical scanning head that attaches to most dot matrix print heads
to produce a scanner. The printer is used to position the material to
be scanned, and is capable of very high accuracy. Great way to start
playing with scanning technology. Several versions of the software
included. Plugs into the cartridge port.

Syquest SQ555 44mb removable platter hard drive, fully supported by all Atari
hard drive software. Standard 50 pin SCSI interface, 5.25 half height,
bare device.

Syquest 44mb cartridges, made by Syquest. I have 15 of them, no bad sectors,
factory plastic library case included with each.

Quantum Prodrive 80S 80mb 3.5" hard drive, standard 50 pin SCSI.

Seagate ST296N 85mb 5.25" half height hard drive, old and huge yet reliable
as a rock (for me, at least, as it was my first drive :-).

****PC Hardware****

Adaptec 2940W PCI Fast-Wide SCSI-2 disk controller, one of the fastest SCSI controllers available for the PC, OEM version, still factory sealed (i.e. totally unused). Includes card, cable, manual, driver software. Supported by DOS, Windows, Windows 95, Netware (Novell), Solaris x86, Linux, etc. This card provides connections for both Fast SCSI-2 (50 pin) and Fast-Wide SCSI-2 (67 pin) devices.

****Application and Utility****

ExtenDOS v.1.21, software to allow use of standard SCSI CDROM drives on Atari ST machines.

Tempus v1.x, excellent text editor, not as good as Tempus II, but no slouch either. Blazingly fast (hence its name), even on a box-stock 8mHz system. Designed for programming, great for general editing as well.

TurboJet, Neocept, fast GDOS print driver for HP Deskjet and Laserjet printers, includes a bunch of 150 and 300dpi fonts. Claims to be 200-500% faster than other HP drivers (for that time, I don't know if there are faster ones out now).

Microsoft Write for ST, buggy WYSIWYG word processor, the only Microsoft product ever made for the Atari that I know of, includes a full copy of Atari GDOS. Can be run from floppies and a ramdisk (Jeez, did I really do that? I must have been really patient back then :-). I managed to produce a bunch of papers and letters with it using only a floppy and color monitor, so it is usable, though certainly not state of the art.

CAD 3-D v1.0, Antic, original disk accidently laundered (don't ask :-), includes original docs plus backup floppy. This is not really for architectural design (i.e. Dynacadd or Autocad), but to make nifty 3D animations for fun.

****GAMES****

Games marked with a * are, in my personal opinion, really killer games. No ST game collection should be without them. Games that are known to not work on MegaSTE machines are marked "No MSTE".

* Operation Thunderbolt, sequel to the arcade game with the plastic Uzi submachine gun mounted on it. Uses mouse for control, excellent "blast everything" game. Great explosion and gunshot samples.

* Vroom and Vroom 2, my favorite ST driving game, uses mouse for all controls, nice filled vector graphics, very very fast.

* Speedball 2, bionic-enhanced brutal futuristic football, excellent two player simultaneous game.

* Robocop 3, awesome ST arcade game, includes a combat driving game, 3D third-person fighting game (virtua-fighter style, though not as pretty), and a Doom-style 1st-person shoot'em up phase (no texture mapping,

bummer). Great game. STe enhanced.

* Menace, Psygnosis, side-scrolling "blast everything" game, very fast, very good. This is the precursor to Blood Money.

* Hard Drivin 2, 3D filled vector driving game, stunt and racing tracks, can play via serial link with ST, Amiga, or IBM PC versions of the same game.

* Armourgeddon, Psygnosis, excellent combo-game, battle a variety of enemy craft in a huge virtual world while piloting hovercraft, tanks, jets, gunships, or bombers. Cool combination of arcade action and strategy. Two player cooperative play via serial link, really cool that way.

* Wanderer 3D, super-cheesy game with one overwhelming redeeming feature: 3D glasses are included. Pretty nifty, though you will go blind if you play too much :-).

* Super Hang-on, one of the best motorcycle racing games for the ST.

* Gold of the Aztecs, platform game with huge sprites, great graphics and sound.

* North and South, strategy wargame with lots of tongue-in-cheek humor, based on the popular French comic. Very well done, and can be configured to play itself. Really shows off an ST.

Driller, 3D filled vector first person arcade adventure, huge game space, similar to Descent on the PC (no texture mapping, of course).

* Stunt Car Racer, One of the best car racing games for the ST. Two player null-modem game is excellent. Original disk, xeroxed docs (I lost my original docs).

Blacklamp, side-view platform game. Collect all the lamps to fight the dragon. Excellent graphics and gameplay.

Barbarian II, This is the sequel to Deathsword, the one or two player sword-fighting game. It is not the Psygnosis adventure game. This is a blood and guts action fighting game. Excellent.

Double Dragon, one of the first beat'em-ups for the ST. Dual player mode is cool. Multilevel side-view platform fighting game. Good. Original disk, no docs/box (unneeded for the game).

Awesome, Psygnosis, Several different types of action game rolled into one. Excellent shoot-em up game, graphics, sound, and gameplay all first rate. This one really shows off the machine.

* Wrath of the Demon, side-view scrolling action/adventure, excellent graphics, sound, and gameplay. Four disks (!), extremely challenging, STE enhanced. This is another one that really maxes out the ST/STE hardware.

Swiv, overhead view jeep/helicopter shoot'em-up. Simultaneous two player mode, STE enhanced graphics and sound (will work on ST as well).

* Jupiter's Masterdrive, Ubi Soft, excellent excellent overhead-view driving game with guns. Drive on the moons of Jupiter. Extremely cool simultaneous split-screen two-player mode.

* Alien Syndrome, overhead view scrolling shoot'em up, lots of fun for two simultaneous players. Plenty of fast and furious shooting, lots of weapons, little droids that follow you around and help you out, big ugly aliens, etc. Great game.

Captain Fizz Meets the Blaster-Trons, Psygnosis, sort of like a Gauntlet II in space, best with two simultaneous players (screen is split to give each player their own view). Overhead view, destruction galore.

* Baal, Psygnosis, Excellent platform/adventure game (mostly arcade action). Future setting, sideways scrolling, large sprites, good guns. This is a pretty hard game, but lots of fun.

Sidearms, Capcom, scrolling sideview shoot'em up, mouse controlled, lots of weapons and powerups. Great "mindless destruction" game.

Enduro Racer and Crazy Cars, combo pack, no docs, Enduro Racer is a cross country motorcycle racing game, Crazy Cars is a racing game. Both are OK, though quite old.

Super Cycle, Epyx, no docs, oval track motorcycle racing.

Eliminator, strange driving/shoot'em up game, lots of different weapons and bad guys.

Frostbyte, Starsoft, side-view platform game, I would recommend it for a small child (in terms of its difficulty). A bit boring for us big children, IMHO.

President Elect 1988 edition, SSI, presidential election simulation, graphics are quite lame (mostly text, in fact), but I suppose a political process fan might like it. It does not appear to be particularly tied to the 1988 elections, and has data for US elections all the way back to 1960. Can apparently be used to predict elections as well.

****ST Action Magazines (with coverdisks)****

Issues available: 26, 43, 50, 51, 53, 54, 55, 56, 57, all include coverdisks.

These mags are great for game fans. The reviews help one avoid poor games and select good ones, plus there are cheats for the games, how-to-play guides, and useful non-game related articles (hardware reviews, expansions, etc.). Also, they all have a "best ST games to date" list in them, which is a great way to select the "best of the best" when game shopping (for example, from discount houses who only list the names of the products, with no descriptions). Finally, the cover disks that come with the mags provide demos of games (so you can try before you buy), plus full PD/Shareware games

and other software. Most come with two disks.

Also available: three ST Action binders, each will hold about 12-14 issues without any damage or modification (wire-in-the-middle style) and make it convenient to leaf through the mags. Sold/traded only as a group. These are well made, nice looking binders with the ST Action logo on them. Will hold any of the large format UK magazines (A4 size, I think).

Hi!
I wonder if there are people out there who have succeeded in
running Lynx under Mint/X. Could somebody give a hint
about the terminal settings? I have my term variable set to xterm and
TERMCAP pointing to /etc/termcap, which I believe is the correct
setup. Lynx does start up, but the display is a complete mess. I tried
giving it the command line option -term=xterm, as well as unsetting
TERMCAP, trying other values for term, and all the possible
combinations and permutations of the above, to no avail. I read the
man page and tried to find something suitable to edit in lynx.cnf,
again with no success. Any help on this would be greatly appreciated.

CAUC (Coventry Atari User Club)

Just a reminder about the time and date of the very first meeting
of the Coventry Atari User Club. So if you are looking for a local
club supporting your machine, why not drop in?.

When: Saturday 20th July 1996.

Where: The Old Clarence pub.
(on the corner of Hearsall Common, on Earlsdon Ave North, opposite
the entrance to Broomfield Rd) in Coventry.

12 o'clock mid-day onwards.

As you will no doubt have guessed, this first meeting will be more
of an informal get-together than a meeting. It's hoped than plenty
of you will come along and show your support.

For more information, give me a call on (01203) 715921,
netmail or Email me...

```

There was a bug, indeed. Setting the keyboard to USA didn't work.
This bug is fixed now and a new version of BOOTCONF is already available
on acp5.chemie.uni-kl.de. This version comes with German _or English_
GUI, depending on the language of the TOS it was started on.

There are adaptors from 9 to 15 pins available.

: appreciate feedback on which monitors will handle all this. A 14 inch
Some years ago most multisyncs had horizontal frequency ranges from ~15
to 35 kHz (very popular: NEC3D). These monitors were able to handle
tv frequenties (15kHz, ST low/mid) up to standard VGA frequenties (31 kHz,
ST high). The horizontal sync rate of modern Multisyncs starts at 31kHz.
So you'll have problems to get a monitor that is capable of displaying
st low/med. Perhaps you'll try one of those amiga monitors since the
lower amiga resolutions are at tv frequency range, too. The easiest way
is to buy a old defect NEC3D and repair it.

Ciao,
Till

I am running 3 machines, a 1040ST for my BBS, a Mega ST4 which needs repaired and a Falcon030 which I'm setting up. I don't know how many of you have noticed, but there are programs for the other platforms which can be used to track stars,planets,comets and do much more. Programs like Sky 2000. What I'm looking for is software like that that can be run on either and/or both the Mega ST4 or the Falcon030. Take a look in Sky and Telscope or Astronomy magazine and you'll see what I mean. Is ther any like that out there?

From: jkauppin@muikku.jmp.fi
Message-ID: <4ritpl$l46@teeri.jmp.fi>
Source record: 142333

I've got two complaints of my games list, as majority of
its material is not Atari-scecific.

I'm NOT prepared to make special edition for Atari-users though.
If I did that, I might as well do cut-down edits for
every damn newsgroup I mailed it to.

The list is multi-platform, and will stay so.

I was told there has been complaints in this newsgroup as well,
but I checked and didnt see any. So it certainly isnt any
major problem.

Decide it yourself. I can stop posting to Atari-groups,
and delete whole Atari-section away. Or continue posting,
wishing updates from you people here. Your choice.

Besides, the list isnt anywhere 60 kilobytes or over it.
It's not even 20 kb long. And if it's mailed hardly twice
a month, it's no big deal to anyone. IF it is, just add
"Grendel*" to your killfile.

jok

258. Problems w. Sportster Vi 14.4 Faxmodem

Newsgroup: comp.sys.atari.st
Date: 1996-07-05 00:00:00 UTC
From: absolute@sci.fi
Message-ID: <4rjcou$m0c@tron.sci.fi>
Source record: 142336

Hi for a long time!

I've got a bunch of problems with my new Sportster Vi 14.4 Faxmodem. I guess everything would be OK if I had a PC with Windows, but I'm working with Atari ST and Amiga, so..;)

The problem is, that the modem DOES work fine with normal data-connections, but I can't make it send a fax or use its voice capabilities.

I'm using a registered version of fax/voice software "CoMa -- Communications Manager 3.10" for Atari ST. When I'm trying to send a fax, the program tells me that "The modem reports error", and when trying to configure the answering machine options, I'm being informed that "The modem has no voice-modus". Damn..:(

The manual of the modem tells me that the command

AT #CLS0 Should put the modem in data-mode,
AT #CLS1 in class 1 fax-mode,
AT #CLS2 in class 2.0 fax-mode, and
AT #CLS8 in the voice-mode.

I've tried to give these commands to the modem with a normal terminal proggy, but all I get is "ERROR" every time.

All help is warmly welcomed!

Thanks! =)

- Jyri

Source record: 142338
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

First of all I want to say that I really do know nothing about
Mint/Mintnet. I've these things runnings but that's all. So the
questions I've maybe sounds in the ears of experienced Mint gurus
stupid but I do hope that I'll get an answer.

According to the manual of HSMODA7 I should run the different
drivers after the Mintnp.prg in my auto-folder. I've done that so but
now at booting time I don't see any on screen loading messages of these
drivers after the loading messages of the Mint/Mintnet stuff.
Is it possible that any auto-folder prog placed after the
Mintnp.prg won't be loaded at all? If so how can I get around this?

Thank you in advance
Martin

As the BBS network (shall I call it that?) are taking
comp.sys.atari.st, and other internet newsgroups then wouldn't it be
good if we could take the BBS message echos, especaily Nest,
I used to take them but unfortunatly I am in the middle of the UK and
do not have a local BBS, so national calls where needed, yes even
being a point needed national calls no matter which way you spin it,
has anyone ever gotten into an ATARI BBS via the internet for the
message base's, is this possible, or is there anything in the
pipeline?

Cheers.............!ynoT

I am looking for a function that will sit in the background,
and send an alarm "Time's up" after a certain time.
Kermit asks for a packet, and waits forever till it gets one. If there
is a transmission error, it waits.............
alarm_ lets it reask for the packet.

One quick note, the monitor itself can run at either 50 or 60Hz so that point's moot now. But the ST runs in either 50Hz or 60Hz which is set by some coding. In fact, ST Format had a very small listing which toggles the screen rates and I use it to restore the desktop back to 60Hz after playing 50Hz games. Most European games will automatically switch when run and on NTSC TV's the picture rolls. The more I found out out how this works, the better I can understand playing certain games. :)

Source record: 142351

```
Still fighting the endless 'Resolving host' of CAB ?
Try the following parameters in DEFAULT.CFG:

MTU = 1500 (ask your provider)
MSS = 1460 (MTU - 40)
RCV_WND = 2920 (2 or 3 times MSS)
DFB_SIZE = 2920

In many cases these values do not seem to be critical, but I found that for
some Web pages it turns out to be crucial.

Does anybody know where to find good literature about these
TCP-IP parameters ?

Greetings from Holland!

there is a mailing list for the Atari port of netBSD .. I can't remember it is now
even though I am subscribed <G> .. it is a bit quiet :-(

> > convince me which to install. All I found was NetBSD is good is you
> > want a BSD OS and Linux is good if you want a Posix compliant OS.

seems fair enough , and perhaps all that matters . Personal preference for me
is linux as it seems to be much better supported and esp. for m68k a lot more
hardware is supported (Falcon)

> others prefer the Posix Systems You can't really say what is better. If
> you just want to have a Unix Style System MiNT could also be the choice.

Linux is totally modular aswell , i.e you can compile all (or nearly all)
device drivers as modules which are loaded in only when needed .. on the fly.

I have a bit of an Oddity. I have a switch box that hooks upto a
MultiSync Monitor that does the Hertz Cycle Rates for both Color and
MonoChrome Monitors on the Atari ST, and has a high enough Resolution
to handle MonoChrome or Color. 640 x 400 Resolution. Unfortunately,
this switch box only supports a standard 9 Pin Connector. I would
appreciate feedback on which monitors will handle all this. A 14 inch
would be nice, nothing less than a 13 inch screen. A list of Makes and
Models Would also be nice! Please direct all replies through E-Mail to:

: a common problem.

Do not panic!! The problems you are encountering are common to us all.
STiK is partly the culprit and CAB doesn't really handle unusual
circumstances (ie..being firewalled) very well yet, but with time these
problems will be sorted. I tend to visit only sites that live on the same
section of the backbone or sites that I know are reliable. Netscrape is
the problem on most sites that crash because Netscrape syntax is going
further from the true HTML standard with each release. Sadly it is the
No.1, and appears to be doing a Bill Gates to us :(We will get better
though...its just a question of time...

Grr... <g>

I could put 'Balance of Power - 1990 Edition' in it... and forget about it?

Actually, I wouldn't. I have a 'Leisure' partition. I wouldn't have a 'good_games' directory because a duff game wouldn't be on the drive in the first place. What's wrong with BOP1990 - I know what it is. I don't see the benefit of having a file called "Balance of Power - 1990 edition -saved game set for playing on the ruskies side, where I screwed up just before the twiddly bit" (.TXT <g>) even if the long filename system *could* contain spaces (which I'm not sure it can).

It's not filenames or directory names that I want to be compatible to W95 conventions, it's the file formats themselves. Will any Texel demo include 1-2-3 or Excel importing capabiliies for me to try out? Now that's something I can relate to...

The tail doesn't wag the dog on my harddrive... B^{<

291. HP LaserJet .CFG file?

Newsgroup: comp.sys.atari.st
Date: 1996-07-06 00:00:00 UTC
From: waynlein@news.hk.super.net
Message-ID: <4rlg9g$sfg@tst.hk.super.net>
Source record: 142223

Thanks to Denesh Babhuta (Danny, sorry about the spelling; I'm doing this from memory) I've managed to track down a printer driver for the HP LaserJet 5L that Toad Computers sold me (with only PC and Mac software - for shame!) Now: has anyone out there managed to construct a .CFG file for and of the LaserJet family that will work with WordWriter? HP does not include any printer codes in its manual, since Word for Windows, et. al., "know" them already. I've tried cribbing an old Deskjet configuration I found at the UMich archive, but an odd thing happens when the printer is called upon to print a long string of capital letters in a given line - that line (and any column entries it contains) end up shifting to the right. In other words, it prints capitals as "bigger" than ordinary letters. If anyone has overcome similar problems, I'd appreciate your help, or at least being pointed in the right direction.

Yep, check your mint.cnf file. Probably there is cd u:/ or
stuff like that. If you want the auto stuff to continue loading
after mint.prg, you have to change the path to c:/auto
if path is changed in mint.cnf.

I want to have a go at this.

I've used Memfile 3.0 which is pretty good. It edits memory and files (and disks IIRC). I havn't tried it on my hard disk though - ICD stuff isn't 100% legal and so some disk-editors can trash the hard disk - so I just copy the files onto floppy first.

296. Help! Need working version of SoftPC!

Newsgroup: comp.sys.atari.st
Date: 1996-07-06 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <BrGOVbz.johnhechtman@delphi.com>
Source record: 142228

Title says it - I _paid_ for the Compo Power CD from Toad, only to find that the version of SoftPC included on it is missing a needed file called C_DRIVE.HDF. Without this file, it seems impossible to set up SoftPC as that is the file that tells SoftPC to use folders to emulate partitions. :(:(

Could someone send me a UUEncoded version of SoftPC _that works_? Surely I've earned the right to have it by purchasing the CD from Toad, don't you agree? Or alternately, could someone tell me how to make the version on the CD work?

Thanks in advance for your help!

John Hechtman aka "johnhechtman@delphi.com"

Hmmm, I just tried it after reading your reply and _I_ got a
DEFAULT PATHNAME and item selector. Weird. What version of Flash II
are you running (not that I really believe the key-combo has changed)?

Another method, more involved, is to download a file and change the
pathname to download to - then save that path in your SAVE BOARDS
(or is it in OPTIONS?) dropdown menu. Maybe John Trautschold has a better
solution - try him at missionware@delphi.com.

I tried this out with v 3.53 and it also seems to work, but it can't
find the help files and keeps on looking (often but not always) for a
non-existant default font... however using the fontmap file i set up
for v 3.33 works better.

299. soft-pc

Newsgroup: comp.sys.atari.st

From: bh@okcforum.osrhe.edu
Message-ID: <4rluc9$2ao@frazier.uoknor.edu>
Source record: 142231

>SoftPC included on it is missing a needed file called
>C_DRIVE.HDF.

Directions for Using Soft-PC

Create a folder on your hard drive and put all the Soft-PC files in it, except the *.FNT files. Put the *.FNT files into a folder called softpc on the c:\ drive. Load the file softpc.cfg into an editor and make the following changes:

HARD_DISK_FILENAME x:\c_disk.hdf (where x is the drive and path
HARD_DISK_FILENAME2 you chose for the file c_disk.hdf)
FSA_DIRECTORY c:\softpc
COM_PORT_1
COM_PORT_2
COM_PORT_1_TYPE
COM_PORT_2_TYPE
LPT_PORT
LPT_PORT_TYPE

The file "c_disk.hdf" must be created. The second following paragraph explains how to do it.

Falcon users, not TT users, make sure that before you run SOFTPC.PRG that you run GETREZ.PRG first. If you are using Soft PC without the "c_disk.hdf" file formatted as a PC boot drive, you will need to insert a DOS boot disk in drive A. Run Soft PC. The "Error Panel" will come up. Choose "Setup", then choose Cancel from the file selector. The system will try to locate the PC boot drive, but will not find it. You will be back at the Error Panel again. Keep selecting "Setup" and then "Cancel" until the program gives up and loads DOS from drive A. This usually requires three tries.

The Hard Drive partitions are emulated, so it is necessary to generate HSF-files. To generate an HSF-file, from the menu select "PC Drives". If the file listed under the menu "C: Hard Disk" does not operate, delete it or rename it. Select "D: Hard Disk" then select "CREATE", fill in the filename, "c_disk.hdf", enter the desired disk size and click on "OK". Then select this newly created file under "C: Hard Disk".

You must then use the DOS "fdisk" utility to partition this pseudo C: drive. Then use the "format c: /s" command to install the system. NOTE: When using this format command you are only formatting the .HDF file, not your Hard Drive!!

After setting the "c_disk.hdf" file up as a boot drive, Soft-PC acts
like an ordinary PC, if there is a disk in drive A, it will try to
boot from it. If not, it will boot from the C: drive (c_disk.hdf).

>LaserJet 5L that Toad Computers sold me (with only PC and Mac software -
>for shame!) Now: has anyone out there managed to construct a .CFG file

Unfortunately the manufacturers don't think anyone is using their stuff on
an Atari. Can't blame that on TOAD. Maybe if you _DO_ find useful drivers
you could FTP them to Atari Archive _AND_ to TOAD's site?

>for and of the LaserJet family that will work with WordWriter? HP does

>appreciate your help, or at least being pointed in the right direction.

I have a driver for WordWriter that works w/ 300dpi LaserJets, I suspect
that would work with the 5L however you'd probably only get 300dpi output.
If that's sufficient for you, or if you would like to use it as a base to
modify, let me know. I can post it here or email it to you. In fact,
if it's not already on aaue, I should probably put it there, eh?

Let me know.

>astrology birth charts on the STE. I'm in the UK.

I've played about a little with a program called astro_22. I got it
from an ST Format cover disk some time ago, but I think you'll get it
from a good PD library eg Goodmans. I checked the Hensa index and it
doesn't seem to be there, but I suppose you might find it at one of
the other FTP archives if you're lucky.

It's shareware, so some bits don't work in the unregistered version,
and it has a whole load of add-in modules which do progressions etc.

If you want to go direct, the author's details (from the
documentation) are:

D.K. Wilkinson,
402 Wakefield Road,
Dalton,
Huddersfield,
West Yorkshire,

Source record: 142238

jmh@io.org (Mike Harrison) writes:

>How do I set the exact downlaod (or upload) path in
>Flash II v2.21?

Mike - it depends on which version of Flash II you are using. The easiest way to set the upload or download path (in any version) is to go to the Transfer menu and click on Download or Upload. Then, without selecting a file, use the file selector to change the path to whatever you choose. Click on OK. The file selector exits. Now, go to the File or Options menu, depending on the version, and click on either Save Defaults (File menu) or Save Options (Options menu). Flash II now remembers the path you set and will use that path every time it boots.

If you are using version 3.01, our latest, you can use different paths for downloads and uploads. Each path is set as above, you just need to do the exercise once for downloads, and a second time for uploads.

Tony, you are NOT paying attention! <G>

Paul Baker has published Net2Net, and I have released UUCP-ST (including Wormhole), both of which allow the use of NOS as a mailer for sending Fido-technology (e.g., NeST, AtariNet, et al) packets via Internet email. In fact, I get my NeST feed direct from Paul now, he using N2N and I using Wormhole, so I get the messages within 24 hours of their posting in the UK.

I also posted here that I'm looking for a FANfiles feed, and will provide an AtariNet feed in exchange for whoever would feed me the files. I know BT charges by the millisecond even for local calls, but it seems to me that whoever is getting AtariNet long distance now would save somethign by calling locally to Demon or another ISP for the same packets.

a> Does anybody know if there has been an upgraded version of Uniterm(V2.0e
a> 011) for Atari that supports Z modem? Is it available as shareware?
a> I can't upload files to my ftp website without it and best.com's file
a> transfer protocol is not compatible with Uniterm. Thanks!

Try this:

The following macro will start up an external zmodem program. All
it lacks then is autostarting downloads (and ANSI).

```
# XYZ2.TTP up/download macro for Uniterm 2.0e and XYZ.TTP version 2.0.
# Name this file to: XYZ2.MAC
# Use command: "%macro('xyz2.mac')" (w/o quotes) on a function key to run.
# Make sure XYZ.TTP (v 2.0 or higher) and XYX2.MAC are in default drive.
# You should have 50k or more space in your system buffer.
# This assumes you want to use XYZ for ZMODEM only. "-p" pause switch
# is always used. If default "dflt" is used, XYZ will download to the
# same drive as it was run from. You might want to edit lines 5 and 10
# to change the default filesector drive. Change the C: between the '' to
# whatever you want. Do not add spaces or "\" marks if you do not specify
# a folder. Add a folder by using: "C:\stuff\". Next line is line 1.
me('XYZ201.TTP ZMODEM. Cancel=option prompts')
if(inp('Enter <RET> for dflt dnload or Cancel')) run('xyz201.ttp','-p/r/n')
ex( )
if(!inp('Enter <RET> for dwnld, <CAN> for upld')) ju(1)

k> I finally managed to get the gemview 3.15 files, but lha tells me that
k> the file "gvw_315.lzh" doesn't contain any files. Another version
k> of the unarc'er tells me that the header is corrupted. This is the
k> second copy I downloaded, which was identical to the first.

I assume you obtained it via ftp. In most cases, you need to set your type
ot Binary before downloading, else you get 7-bit ASCII text even if the file
being sent is 8-bit binary data. Naturally, 7-bit ASCII doesn't uncompress
properly.

Message-ID: <4rkgc2$rq0@tron.sci.fi>
Source record: 142249

Jyri Hovila (absolute@sci.fi) wrote:

: I'm using a registered version of fax/voice software "CoMa --
: Communications Manager 3.10" for Atari ST.

Just got the version 3.40...

: When I'm trying to send a fax,
: the program tells me that "The modem reports error",

Yes. This problem still remains, even 3.40 should work with Sportster Vi.
Maybe I need to add some mantra to the Init-field of the Expert-parameters
screen..?

: and when trying to
: configure the answering machine options, I'm being informed that "The
: modem has no voice-modus". Damn..:(

Well, I couldn't use it anyway, as I've got Mega-ST and haven't got the
skills to do the required hardware modifications needed to gain 38400
baud serial port speed..:(

: The manual of the modem tells me that the command
: AT #CLS0 Should put the modem in data-mode,
: AT #CLS1 in class 1 fax-mode,
: AT #CLS2 in class 2.0 fax-mode, and
: AT #CLS8 in the voice-mode.

There's some errors in the Finnish version of the manual; these should
ofcourse be "AT #CLS=0" etc... Well, I sent "AT #CLS=2" to the modem
before starting CoMa, but I'm STILL getting error when trying to send a
fax!

If anybody has a slightest idea what could be wrong, PLEASE let me know!

Thanks! =)

- Jyri

321. ANN: ExtenDOS Pro v2.4A

Newsgroup: comp.sys.atari.st
Date: 1996-07-07 00:00:00 UTC
From: anodyne@magi.com
Message-ID: <4rncui$rs5@news.istar.ca>
Source record: 142157

```
Anodyne Software announces: 1 July 1996

ExtenDOS Pro v2.4A: MagiC4 support and more
-------------------------------------------

ExtenDOS Pro version 2.4A is the latest version of Anodyne Software's
CD-ROM drivers for Atari systems. Like previous versions, it provides
access to CD-ROMs and audio CDs on most popular CD-ROM drives, but v2.4A
offers many new features including:

. support for the extended GEMDOS calls (a la MiNT) that the MagiC4
desktop uses, allowing access to CD-ROMs from the MagiC4 desktop
. support for the Nakamichi MBR-7 changer
. improved detection of CD-ROM change on Sanyo drives
. additional retry attempts for read errors, increasing the chance
of successful reads under adverse conditions.

It continues to offer:

. easy installation and reconfiguration via a GEM-based installation
program
. support for a wide range of CD-ROM drives, including changer
mechanisms, plus automatic support for photoCD and audio CD
on most new drives from established manufacturers
. direct audioCD-to-disk recording (requires compliant hardware)
. an extremely stable and well-tested environment.

With ExtenDOS Pro, you can play audio CDs as easily as you can access the
data on CD-ROMs. Put a CD-ROM in your drive, and access it like a large
removable hard disk, or pop in an audio CD and use the included program
to turn your CD-ROM drive into an audio player.

Direct audioCD-to-disk recording
--------------------------------
ExtenDOS Pro now allows you to copy segments of an audio CD directly to
your hard disk, at sample rates of 25.033, 44.1, or 50.066 kHz. The
length of recording is limited only by the size of your hard disk!
Please note that this function requires the appropriate hardware support
within the CD-ROM drive; at this time, for those drives that are known
to provide some form of support, the status is as follows:

Drive Comments
----- --------
Chinon 535 (revs Q20 & R20) not tested
NEC drives (current models) OK, but see NOTE below
Panasonic 8004 not tested
Pioneer 602x not tested
```

Plextor 4plex not tested
Sony 561 (& OEM equiv.) OK
Toshiba 3401/4101/3601 OK

NOTE: many recent NEC SCSI-2 drives (1995 or later) work correctly.
However, earlier SCSI-2 drives such as the NEC 3Xp have problems;
although they appear to function correctly, the firmware does not
always return the audio data sequentially, resulting in 'stuttering'
in the copied file.

For the latest support information, please contact Anodyne Software
via Genie (R.BURROWS1), or via the Internet (anodyne@magi.com), or
write to the address below.

Audio support

ExtenDOS Pro includes the following audio functions:

. play/pause/stop/eject
. track forward or back
. index forward or back
. skip forward or back
. cd repeat/shuffle
. scan
. set play segment
. volume control

These are provided through an interface visually similar to a standard
audio CD player, with clearly-marked buttons and a complete time/track
display. A smaller version of the main window may be selected at any
time; this is particularly effective in reducing screen clutter when
running the audio player as a desk accessory.

ExtenDOS Pro conforms to the defined CD-ROM software interface standard;
programming details for this interface are available on request from
Anodyne Software at the address below. The interface allows third-party
software products such as the CDP program from Alexander Clauss to access
the audio CD functions and provide functions beyond those available in
the CDAUDIO program/DA.

Data support

ExtenDOS Pro provides support for industry-standard CD-ROM formats. You
can access any ISO9660 or High Sierra format CD-ROM as if it were a
removable hard disk, switch between supported disk formats without a
reboot, and access files of any size. ExtenDOS Pro even provides a
built-in configurable cache facility to speed up data access. And with
the right drive, ExtenDOS Pro supports single-session or multisession
photoCD as well.

Hardware requirements

ExtenDOS Pro requires a SCSI CD-ROM drive connected directly to a SCSI

port, or connected to an ACSI port via an ICD AdSCSI+, Link, or Link2 (or equivalent) host adapter.

Please note that other host adapters (including the original Atari host adapter, the Supra, the BMS, and certain early ICD adapters) may not be capable of transmitting the commands necessary to support audio CD and photoCD. If you're not sure whether your adapter is compatible, please contact Anodyne Software at the address below.

ExtenDOS Pro runs on all TOS-based Atari systems, including the ST, STe, Mega, MegaSTe, TT030, and Falcon030. Supported functions depend on the type of drive:

Function	Type of drive
read standard CD-ROMs	Any
read photoCD	Most current drives
audio control/play	Any fully SCSI-2 compatible drive; selected SCSI-1 drives, including models from NEC and Sony
audio copy	Selected drives (see list above)

The following is a partial list of supported drives:

. Apple CD-300e,CD-300e+,PowerCD
. Chinon 525,535
. Compaq 561
. MediaVision Reno
. Nakamichi MBR-7
. NEC 25,35/72/77/80/82,73/83,37/74/84,38/74-1/84-1
. NEC 210,3Xe/3Xi/3Xp,3Xp+/4Xe/4Xi
. Panasonic 501
. Pioneer 602X,604X,124X
. Plextor 3024/3028,5024/5028,4plex
. Sony 6211,8022,541,561/55S
. Sun CDPlus
. Texel 3024/5024
. Toshiba 3201,3301,3401,3501,3601,4101,5201,5301

For the latest information on supported drives, please contact Anodyne Software via Genie (R.BURROWS1), or via the Internet (anodyne@magi.com), or write to the address below.

Software requirements

ExtenDOS Pro requires one of the following operating environments:

. TOS (1.0 through 4.04 tested)
. MultiTOS (with MiNT v1.08 or v1.12)
. Geneva (v003/v004 tested)
. Mag!X v2
. MagiC4

Availability

ExtenDOS Pro v2.4A is available now at a suggested retail price of $39.95.
Order from your local Atari dealer, or directly from:

Anodyne Software
6 Cobbler Court
Ottawa
Ontario K1V 0B8
CANADA.

If ordering from Anodyne Software, you may request a manual in French
instead of in English.

ExtenDOS Pro Upgrades

If you are an existing ExtenDOS Pro user, you can upgrade to version 2.4A
AT NO CHARGE by downloading an upgrade file. This is now available from
several Atari FTP sites, including:

ftp.toad.net /pub/newstuff/epro_24a.zip
atari.archive.umich.edu /Diskutils/epro_24a.zip

Alternatively, you may upgrade by sending your original diskette plus $7
(including shipping) to Anodyne Software at the above address. Please see
below for methods of payment.

ExtenDOS Upgrades

Existing owners of ExtenDOS may upgrade to ExtenDOS Pro v2.4A by sending
their original ExtenDOS diskette plus $20 (including shipping) to Anodyne
Software at the above address. The upgrade includes a manual. Please
see below for methods of payment.

Methods of payment

For North American orders, please make your payment by cheque or money
order, in US$ for shipping to the U.S.A., in Canadian$ for shipping within
Canada. Ontario residents please add 8% sales tax.

For shipments outside North America, please pay by money order in US$.
Please add an additional $2 for airmail shipping.

I'm using ICD stuff as well (along with the "Link II")- what should I do to make it "legal" as you say?
I know there's an option in the formatting menu to make it "AHDI compatible", but maybe this isn't enough. Would I need to buy another harddisk driver and reinstall the whole thing again (copy the contents over to another unit, reformat/re-install the drive, and move the data over to the drive)?

Yeah, that would be nice. Not that I usually use Kermit (I use Zmodem with my UNIX based net provider), but I'd need Kermit to transfer data over to my Apple][+ computer from my Atari STe, and like you say, the existing ST port isn't actually attractive to say the least.

: Hmmm, I just tried it after reading your reply and _I_ got a
: DEFAULT PATHNAME and item selector. Weird. What version of Flash II
: are you running (not that I really believe the key-combo has changed)?

Aha! Problem solved. You didn't specify _where_ to hit Alt-Q.
I was doing it in the editor, whereas you meant (obviously, since
it works) to hit Alt-Q in _terminal_ mode. A rather odd way of
doing it, but, yes, it works.

jtrautschold on BIX (jtrautschold@BIX.com) wrote:
: jmh@io.org (Mike Harrison) writes:

: >How do I set the exact downlaod (or upload) path in
: >Flash II v2.21?
:
: Mike - it depends on which version of Flash II you are using. The easiest
: way to set the upload or download path (in any version) is to go to the
: Transfer menu and click on Download or Upload. Then, without selecting a
: file, use the file selector to change the path to whatever you choose.
: Click on OK. The file selector exits. Now, go to the File or Options
: menu, depending on the version, and click on either Save Defaults (File
: menu) or Save Options (Options menu). Flash II now remembers the path you
: set and will use that path every time it boots.

: If you are using version 3.01, our latest, you can use different paths for
: downloads and uploads. Each path is set as above, you just need to do the
: exercise once for downloads, and a second time for uploads.

Hi all !

I want to get a new HD instead of my old Seagate ST296N.
What HDs would work properly with my TOS / Atari ?
It's a Mega 2 with TOS 1.4. That means I got at least
Big GEM partitions and I can make single volumes bigger
then 16 MB ... but who big can I make them ?

I would like to buy a Quantum Trailblazer (500 Megs or so
and faster the the bus of my ST ;) ... has anybody
any expiriences with that ?

Any hint is highly welcomed - please answer by PM
Thanx,

Andreas

343. VGA Monitor on Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-07-07 00:00:00 UTC
From: sbushman@igc.net
Message-ID: <4rp3os$qia@news.igc.net>
Source record: 142179

I recently purchased a VGA monitor adaptor from Toad Computers, and I brought home my old IBM PS/2 VGA monitor from work. The monitor looks fantastic on my Pentium PC/Cirrus Video Drivers, at 640x480, but when I hook the monitor to my Falcon, it looks all blurry, and there is a significant ghost effect on the right side of everything. Are there certain VGA monitors which will not work with the Falcon? I have not ever heard anything like this before. Perhaps it is my VGA adapter, but when I hook the Falcon to my Packard Bell monitor, it looks Ultra-sharp and crisp. Oh well, any help would be greatly appreciated.

Shane

That is a bit unfortunate for the original poster as this month STF had planned
to put "Player Manager" (based on KO) on the cover disk !! which despite stiff
competition from Championship Manager still carries the mantle of Best FM sim
ever on Atari platform (IMO).

> I thought it was odd too...
Nope..IBM has PPPC boxes running Windows NT and Mac OS. These PPPC boxes
should start showing up in the fall. Softwindows is a solution for ones which
speed is not important. For maximum performance Pentium cards are available.
These solutions have no peers in the hack/slash Atari ST world.

Source record: 142187

Hello all,

Recently I walking along a sidewalk a perfectly working Atari 520 STFM, with a SM125 monitor, however the computer lacked a mouse (you can't expect much from people's garbage afterall), so I'm looking for a mouse, if you've got a spare one and like to sell it then please e-mail me, I'd appreciate it greatly. BTW I'm also looking for some software as there were none with the system. Also, how do I check how much RAM it has, I suspect only 512Kb, if so, how can I upgrade to 1MB? I'm willing to trade some of the software for IBM PC stuff, as I have tons of those ;)

Thanks!

Pete.

353. Killing Sinclap (using NOS)

Newsgroup: comp.sys.atari.st
Date: 1996-07-07 00:00:00 UTC
From: bbeck@netshop.net
Message-ID: <31e02638344f151@netshop.net>
Source record: 142189

I remember reading some posts from people asking how to use the KILL file in NOS. I haven't seen any repies on how to do it so I read the doc's, tried a test and it works.

All you need to do is create a text file named KILL in the spool\news directory and add the relevant line from the news header. So to get rid of Sinclap all you have to do is create a KILL file with the following line:

From: sinclap2954@cobra.uni.edu (PETER SINCLAIR-DAY)

You will still get the header so you will know if he has posted anything, but the body of the text will not be downloaded.

I'm using the pop3 version of NOS and it works for me. :-)

ASH just released their MagiC-PC, a software only ST-emulator. Requires at least a fast 486 with 8MB and Windows 95 (or NT). Recommendation is 100MHz Pentium with 16MB. I'm using a 120MHz 486 with 16MB memory and with ST resolutions it's about the speed of a standard ST. But I've tried it on a 133MHz Pentium with 32MB and it outran my Falcon. Compatibility is very very good. Even games like Populous II work. You can use any resolution your PC graphic card is able to deal with. Costs about 300DM (~US$200). Currently only available in german, but I think an english version will be available soon. A demo version is available (~750KB).

Here is the address:

>had a problem I would attribute to the Falcon itself.

It's the bug present only on some early Falcons (I have TOS 4.02)
which corrupts data transmitted thru SCSI. You get never an error message,
but get corruption... more if the Falcon is hot, more if the screen
res/colors is high, more if you run a DMA sound, etc... something to do
with bus occupation.

I believe some refers to this bug as "the clock bug" but dont know
why. My Falcon has this bug, so I only use 640 * 480 * monochrome res to
avoid it.

A simple way to detect it: compare a big directory with itself with a
program like TREE_CHK (part of the Kobold package), if you have errors...

>Hello,
>I have been trying to learn to program for some time (I gave up trying
>under MacOS a long time ago). I am looking for some source code which I
>can use under GFA Basic 3.6tt (magiCMac user). Any other idea?
>
I started on speccy... writing really crap programs. And then moved
onto GFA2 and then GFA3 and tehn GFA3.6TT

My suggestion is to start with some really simple programs:

i)print your name on the screen 100times
ii)change the screen to many different colours
iii)make the computer beep whenever you press a key
iv)make the computer beep when a key is pressed, unless they type the
password in correctly

Once you've got the hang of the above, decide what sort of more tricky
program, and what sort of areas of programming are involved. Is it
grahpics, maths, sound ???

Study some of the commands in the GFA manual relevant to what you
want to do, and decide if they will be useful or not.

Also borrow other peoples code, run it change it, see what happens.

Its best if these are so much 'complete' programs, but routines to do
silly things like flash the screen, play music, do fancy animations
etc. This way you know that most of the program is going to be
specifically about a certain area of GFA.

Beware of trying anything to fancy to start with (like GEM). Also
don't expect learning it to be too easy.

Its taken me ages to get where I am now, and true enough I'm not
brilliant, either at learning or at coding, but I'm sure there aren't
many people who can learn GFA in a few weeks.

If you need any help along the way, then send me an email and I'll see
what I can do for you.

ATb.

Atari Falcon 030, 4 meg ram, 65 meg ide drive, true colour, stereo sound.

PLUS

Atari 1435 colour monitor, 14 inch, rgb, stereo sound.

PLUS

Mini tower in cludes scsi cd rom drive, scsi tape back up unit and tapes, scsi
120 meg hard drive. all ready to go, this is a complete system.

$1000
a fair and firm price.

Paul

365. Re: Help! Need working version of SoftPC!

Newsgroup: comp.sys.atari.st
Date: 1996-07-07 00:00:00 UTC
From: afn14016@afn.org
Message-ID: <4rnc59$5pd@huron.eel.ufl.edu>
Source record: 142255

This is one of the most solid programs I have ever run on my computer.
I limited SoftPC under Geneva to 2 megs. It is really a nice program
to run dos programs on your Atari.

DETAILED INTRUCTIONS ON HOW TO SET UP and USE SOFTPC FOR ATARI
Available on Power CD From Compo Software (TOAD COMPUTERS)

by Raymond Lohengrin

UNZIP FILE softPC and copy SoftPC folder to your C: Partition. Inside
the softPC folder you will find a zip file called C_DRIVE.ZIP. Unzip
this file and copy the file C_DRIVE.HDF to partition D: or just keep
it in the SoftPC folder. (this folder is a virtual IBM PC C: dive)

SoftPC looks at the file C_DIVE.HDF as a PC C: DRIVE. All files that
you copy from DOS to C: will be stored in the HDF file.

Loading SoftPC.

To load SoftPC run PCRUN.PRG. After about 5 to 15 seconds you will see a
Balck screen with GEM menues on top. This GEM menus are to configure
SoftPC and they are available at all times. If you have any problems
returning to DOS just select from the FILE menu RESET PC and then
abort. This trick can be used at any time to "WAKE UP" SoftPC.

The Gem menu PC drives is used to tell SoftPC where to find is
program folders and wich files will be used as "PC Drives" Remember
that your PC drive C: is not really your Atari C: Drive. When you use
DOS commands to format, write and copy to any DOS Drive (not A: or
B:) you are really refering to your .HDF files.

Select from the PC Drives menu E: HARD DISK to tell SoftPC where your
folder SOFTPC is. (C:\SOFTPC*.*) The path should be set up already.

To configure your PC drives go to the PC DRIVES menu and select C:
HARD DISK. Select your original C_DRIVE file and click OK
To created additional drives, select D: HARD DISK. Then, select
"CREARTE". You will need to write the information about the path of
the new HDF file you are creating and its size. Make sue not to
create an HDF file larger than the space available.

Example:
Create a new HDF file called MY-DATA.HDF with a size of 5 megabytes
long. on partition E: of your Atari Hard Drive.

Select D: HARD DISK from PC Drives menu and then select CREATE.
Type the following.
Disk Name E:\MY-DATA.HDF

Disk Size 05 Megabytes

Click OK.

The new file will be created on partition E: and then you will select
again D: HARD DISK but this time select FILE and locate the file
MY-DATA.HDF. The program will asked to be reset to activate the DRIVE
you have just created.

Now, load DOS from your floppy and at the DOS pront A:\ type "dir"
to list the available files.

Type C:\ and then "dir" to list files on C:\

To copy all file from a:\ to c:\ type a:\ retun and then copy *.* C:\ return.

To format your new created "D:" drive which is really your folder
MY-DATA.HDF"

Type fdisk to run the fdisk program.
After it loads select 5) to change current fixed disk drive.

Enter 2 at the:
"Enter fixed Disk drive Number (1-2).............2"
Use option 1 to create a DOS partition or Logical DOS Partition.
Select "y" for yes to use all the available space.
Press ESC to exit the fdisk program.

At the DOS pront type
format D:
the system will warn you that

"ALL DATA WILL BE ERASED"

Don't Panic this is just refering to your folder My-Data.hdf :-)

After your file is formated (drive D:) guive your new drive a label
like "PROGRAMS"

That is it, you have now a new drive D: available to SoftPC.

At the DOS pront type A:\ and return
Then type copy *.* D:\ to copy all information from a:\ to d:\

You can create as many D: partitions or HDF folders as you like, but
you will have to reset SoftPC for the DHF file to be available.

Enjoy softPC.

Raymond Lohengrin 4/4/96

Some useful DOS Commands:

"dir" List information on Drive
"copy (file name) C:\ Copy the file to C:\
"del" Delete

. Every thing
*.DOC all file ending with DOC
CD (directory or folder name) Chage to a directory Example CD DATA

Other Information.

To return to DOS use Control/Alternate/Delete.
Clr Home Key resets the GEM mouse and takes you back to activates the
GEM Menu.
If you are booting from C:\ make sure not to have a floppy on A:\
If you want to boot from A:\ use a floppy containing DOS.
A great program that makes life on SoftPC easier is Norton Comander.
This program uses "GEM Style" menus to perform file management
functions and also to view and edit files.

Use PCDFMT to format floppys.
to format C:\ to autoload DOS use command

Format C:/s

The Drive will be formated and DOS will be set to AUTOBOOT.

370. Falcon problems

Newsgroup: comp.sys.atari.st
Date: 1996-07-08 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <Du7nAK.IIt@info.uucp>
Source record: 142202

My situation:

I run a MKI falcon with 14megs ram, a blowup FX board and a 850 external scsi drive. My auto
folder programs and acc's are all standard ones that I have seen many other people running on this group.

My problem:

While almost all programs seem to run fine, my decompression programs always seem to bomb out. This includes .zip .zoo .lzh.

I cannot seem to figure out why I always have problems. I usually get files from web sites or ftp sites and I understand that some files in web sites get 'attributed' as text files so
I ftp them. Once they are in my school directory I download them with: sz -w 2048 *
I do not have any errors reported in these first two stages. Once I try to uncompress them I
get bombs or a frozen system 90% of the time.

Does anyone have any idea of how I can go about correcting this?

Keith

I'm looking for a few falcon programs to replace ones I used on the st.

Is there a program out there like Xboot for the falcon? I always used Xbot on my st and it does not seem to want to run on my falcon.

What program do I need on a falcon to put my acc's in a directory other then the root dir?

Is there a program anywhere for either falcon or unix that I can use to turn mpeg2 audio files into somthing I can use with the falcon?

Yes. Use STOOP. Very great program.

> What program do I need on a falcon to put my acc's in a directory other then the root > dir?
STOOP.

You don't need any drivers at all if you format your disks on the Atari with
TOS 1.04 or newer.

This does not look like a problem with the decompression Programs. It
more looks like you have downloaded the files as 7 bit ASCII instead of
8 bit binary. In ftp use the comand "bin" for switching into binary
mode. If those archives are still problematic then maybe it could be the
programs. I do not have any of those problems on my atari Falcon. If you
use netscape, this one tryes to find out the apropriate mode itself.
thos does not work very reliable. I have problems with it as well. Try a
simple comand line based ftp client for it. Usually files to download
from web pages are to trasfere with ftp protocoll. Those transferd with
http sohould make no difference betwen binary and ASCII. So I think you
used ftp all the time, but in ASCII mode.

Christof

Well, there are many boot selectors. I can not sugest one since I dont use one. just look at different ftp sites.

> Is there a program anywhere for either falcon or unix that I can use to turn mpeg2 audio
> files into somthing I can use with the falcon?

I hered of someone developing a MPEG audio player or converter for the falcon, But I dont Know if he still does it. Running MiNT ther is sox that can convert tons of different audio file formats into each other. I dont know, if it also can convert MPEG audio. just try and see...

Christof

PS.: use binary mode to download it...

381. Civilisation on 4Mb Ste

Newsgroup: comp.sys.atari.st
Date: 1996-07-08 00:00:00 UTC
From: Alan Swanson <emdu02@holyrood.ed.ac.uk>
Message-ID: <31E109E4.455E@holyrood.ed.ac.uk>
Source record: 142263

I recently upgraded my Ste to 4Mb. When I went to run Civilisation from a ram disk with M-Disk it loaded and ran fine. However, when I came to save games it just gave an error and wouldn't save to floppy disk or ram disk. When running the game off floppy it saved perfectly.

Any solutions to this would be appreciated, thanks.

ALaN.

There are two that I know of.

Astro 2.2 is sharware, last seen on an ST Format
cover disk but available from various P.D. libraries (Try Goodmans or
LAPD).
This one is GEM based and has versions for medium and high resolution.

Another called AstroCalc is a full commercial product with an ST
version.
You may see this advertised for the Intel PC in Astrology magazines. It
is
available from the author. I don't have the address to hand at the
moment.

388. STs for Sale

Newsgroup: comp.sys.atari.st
Date: 1996-07-08 00:00:00 UTC
From: capka@spf.trw.com
Message-ID: <4rre5i$bs@deneva.sdd.trw.com>
Source record: 142270

Below are three ST systems for sale - I'm asking $675 for all HW/SW (not including shipping). I would prefer to sell everything as a lot in one transaction, and therefore am not currently accepting offers on individual items. However, if I haven't received a single offer for everything, I will post another notice to take offers on the individual systems.

If interested, please e-mail to me at capka@spf.trw.com.

Incidentally, I'm located in the Los Angeles area, so if there is interest from someone in this area, a pick-up will save shipping charges.

Thanks.

1040ST - 4MB, TOS 1.4
1040ST - 1MB, TOS 1.2
520ST - 2.5MB, TOS 1.4

Color monitor (SM1224?)
Two monochrome monitors (SM124?)

65MB hard drive with ICD AdSCSI interface
20MB hard drive with ICD AdSCSI interface

Three external double density floppy drives
Two external single density floppy drives (one doesn't work)

Atari Dot Matrix Printer (SMM804)

ICD Link SCSI adapter
Spectre GCR
Discovery cartridge
1200 baud modem (is this even worth mentioning?)

Also: video digitizer, audio digitizer, reference books
Software: Lots, notably Mark Williams C, various Midi programs including EZScore+, Interlink (even Masterlink!), VIP Professional, Superbase, Easy Draw, MS Write, Word Up

Well, MiNT deletes all the environment variables set before it in the AUTO Folder. This is, because you can set all the environment variables you want in MINT.CNF, and so you can have different Environments on either booting with MiNT, or without it. I Use it to have all the environment set to drive U with MiNT and the physical drive without MiNT.

I have some hints for this one, specifically for the plane and Seattle areas
in the game. EMail me if you think this might help you.

But are you sure you REALLY want the full solution? ;)

Message-ID: <9430@836848734>
Mime-Version: 1.0
Content-Type: TEXT/PLAIN; charset=US-ASCII
Status: R

Would you please forward this to the Atari Newsgroup, if you didn't
already do it? -- stu

We're expecting another outstanding crowd
-- and a full house -- here in Indianapolis
from 10am to 3pm on Saturday, July 13,
at the Mid-Indiana MIST AtariFest VIII.

In fact, we want to alert you that the house
may be truly and fully packed because
of last-minute decisions by vendors and
user groups. When our June 15 "discount date"
came and went, we had to decide to give up our
second ballroom (or risk a hefty loss). So we
are once again back in only one crowded room.

But we expect it will be real cozy -- and busy fun!

Atari Corp. has sent us a complete JAGUAR
to sweeten the pot ... along with a half-dozen
Jaguar games. All will either be given away as
door prizes or offered for sale at auction.
More door prizes are to be awarded also.

Who's coming for sure? Here is the list of those
who put checks in the mail. Others have expressed
interest and may show up -- but we are rapidly
running out of room:

Toad Computers Branch Always ICD, Inc.
SKWare One Computer Direct with T060 Computer Dungeon
Current Notes It's All Relative
```

Systems for Tomorrow chroMAGIC
Crawly Crypt

Computer Direct will introduce the 68060 DirecT060, world's fastest
TOS machine, and BraSoft will debut the Gemulator for laptops.

User groups signed up are:

Toronto Atari Federation EAUG
SCAT LAG
Nashville Atati User Group LACE
ACORN Purdue AUG
BL.A.ST. ASCII

Admission tickets are the same $3 as in the past,
and entitle the buyer to a chance at the door prizes.

See you there:

Best Western Waterfront Plaza Hotel,
US 136 (just west of I-465 and I-74) on northwest corner
of Indianapolis.

: compatible", but maybe this isn't enough. Would I need to buy another
: harddisk driver and reinstall the whole thing again (copy the contents over
: to another unit, reformat/re-install the drive, and move the data over to
: the drive)?

: Hallvard
I think what is meant is that the ICD drivers are not completely XHDI
compliant. This results in (for me at least) MinixFS partitions not working
properly, and may well result in other problems as well. If you're
planning on using another driver, you shouldn't have to reformat as long
as you had AHDI compatibility turned on when you formatted with the ICD
utils. CBHD, for example, works just fine on my ICD Pro Utils-formatted
Maxtor.

: get it. I saw a few versions in the Umich archives but I doubt these are
: the latest. Also, I'd like to know how difficult it is to set up and what
: all is involved. Thanks!

The latest version of MintNet is 0.90 (AFAIK). It can be had from Kay
Roemer's homepage:
http://zeus.informatik.uni-frankfurt.de/~roemer/
Despite what seems to be commonly believed, setting up MintNet is not
difficult. It's merely a matter of unpacking the archive and putting the
correct files in your c:\mint folder. Actually getting connected is a bit
trickier :), but again, it can be done without too much trouble. I don't
know about setting up a SLIP connection, but for a PPP connection you
will need the pppd package, as well as inetd, syslogd, and possibly
others. A MinixFS partition is an advantage, but not strictly necessary.

Howdy folks. Atari Corp. is selling off a bunch of stuff due to a warehouse change, via the Internet. There are ST, Jaguar, and Lynx items at great prices. See http://www.atari.com for details (look for "Don's Wacky Internet Deal #3").

I picked up a bunch of Lynx stuff. If you were thinking of getting a Lynx "eventually", now is the time. Games are going for as little as $6.50 new, Lynx's with 4 games for $40 in quantities of two or more.

Note: I'm not connected with Atari in any official capacity. I'm just passing the word along.

397. HELP! C signal/alarm

Newsgroup: comp.sys.atari.st
Date: 1996-07-08 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4rrt1r$b1v@madeline.INS.CWRU.Edu>
Source record: 142279

I posted an earlier request for help, and some answers, but not enough.
In standard UNIX, there is a signal/alarm function pair, that runs in the
background. It sets a timeout signal, so that a process running in the
foreground doesn't wait forever....
I have MWC, which apparently doesn't have the alarm function.
Someone, somewhere MUST know how to implement this for th Atari.
Please help!

Well thats okay then because Apex is not a good drawing package anyway ..

.. its a Brilliant Graphics and Animation Package :-))

Why about Apex-lite ? Thats not excessively priced for casual useage.

Otherwise you could see if hi-soft are still bundling the True-* packs
for next to nothing . Neither are supported anymore but Image030 is not
that bad .. speed and stability aside.

I've downloaded it. Looks good, but I haven't had much of a chance to play with it yet. Still, it brings back happy memorys. I learnt to program on Model III's many moons ago. :-) Happy days.

What about games, where can I download them from? I particularly remember an excellent Firebird/Galaxians game. Is it available and does it run on the emulator??

Regards, Gary.

Hi!

A while ago, well, quite a while ago, I saw a speech recognition program
for the Falcon. It was very buggy then, and I never really got it to
work. I never got it myself, but would like to now.
But I can't remember what it was called and can't find it anywhere.

Does anyone know about this, or any other speech recognition program
for Falcon? Maybe some improvements have been made to the one I saw?

Thanks for help,

Tomas

407. I/O driver parallel

Newsgroup: comp.sys.atari.st
Date: 1996-07-08 00:00:00 UTC
From: Koos_Kuil
Message-ID: <bf64b9da@f397.n282.z2.fidonet>
Source record: 142289

Hallo Leute,

I don't know... i'm walking around and around with an idea but not worked out. I'm getting crazy from the idea that i don't have a good network between my ST's (and PC). Only +- 4,5 Kb is possible :-(((mit Ghostlink).

I was looking into an old assembler book which explains a little bit how parallel data transfer is possible (like Sttrans), it seems that it's not quite difficult to make something working...

- The data direction maybe only one-way, with some tricks it's not so difficult to get a good communication between both computers.

The book describes:

- Write data:
a. check the busy line for high
If low,monitor until high or timeout set CPU D0 to 0

When high:
b. Set PSG I/O port to input
c. Place data into PSG's B output register
d. Switch strobe line on
e. Switch strobe line off,set cPU D0 register to -1

- Read data:
a. Set PSG I/O B port to input
b. Switch strobe line off
c. Check busy line for high, loop until high
d. Switch strobe on
e. Get data from PSG's B output register.

PSG I/O port B output? (0xFF8800 = 0x8000) ?
Data into PSG B output register? (0xFF8802 = data) ?
Strobe on (0xFF8802 = 0x0020) ?
Strobe off (0xFF8802 = 0x0000) ???

The best thing is to make use of the hardware instead of the Bios functions because they are not working fine (although that's what i think because there's no control about the strobe and busy).

If i go out from a master/slave situation (like STTRANS) then the slave is waiting for input.

#define pFopen 0x00000001
#define pFclose 0x00000002

```
#define pFwrite 0x00000004
#define pFread 0x00000008
#define pFseek 0x00000010
#define pFsfirst 0x00000020
#define pFsfnext 0x00000040
#define pFdelete 0x00000080
#define pFcreate 0x00000100
#define pDcreate 0x00000200
#define pDsetpath 0x00000400
#define pDgetpath 0x00000800
```

When above definitions it's possible to make a kind of data packet:

```
typedef struct
{
long magic; /* Something like PACK */
long type; /* Above type */
long pktsize; /* Length of following data */
} packetheader;
```

When the packet is send, the optional data can be send (pktsize) with
the information, when the packet and data is transfered, the master
can work as 'slave' and wait for incoming data and send something back
what we need on a simulair way.

So when data is transfered... wait for input.

One thing i need.... Who can make it and does suprice me on a day
with an working ST (and PC version).

The PC must also can handle it that's the most important thing and
if it can be worked out between 2 ST's it should also be possible to
make it working on a PC at the same way.

I think a lot users are extremely happy with a good working programm
which can use at least master/slave (a drive letter would be the best).

Greetings,
Koos

Try CAB with the CAB_JPEG.OVL - I think that will work in 1 meg, and you
don't /have/ to use CAB on-line.

Yes. I explained how to do that in this group a couple of weeks ago.

d> Was a patch ever released to get it past 19.2?

No, but you don't need one. Just change the .CFG file to make it think it's
running at 0 baud, and use HSmodem to lock the serial port at 57600 or higher.

Help !!!

Before I start hacking (and mind-blasting) I'd like to ask here:

is there a solution for using Ethernet on a normal TOS-Atari (no not
Linux, just using TOS ;-) .i.e. combined with STiK ???

I found the TU-Wien stuff, but it assumes a special (expensive)
hardware ?

Thanks in advance

42Bastian

You'll be fine as long as the power supply of the monitor gets sorted out, I used to use my UK Atari on US monitor(s) when I first moved to the US, worked fine.

Good Luck with the 120/240v thing though, it worked ok with my 240v Atari running on 120v US supply, but I'm not certain about the other way. :}

416. Should I buy this Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-07-09 00:00:00 UTC
From: jmh@io.org
Message-ID: <4rtnil$fup@news1.io.org>
Source record: 142111

I have the opportunity to buy a used Falcon030 for $550.00 Canadian
(about $400.00 US).

It has 4 MB RAM (not an upgrade) and a 60 MB Hard Disk. The keys are
dark grey but the case is light grey like the ST series. I'm wondering
if it's a prototype of some sort. S/N is Y 43402 1000087 and the sticker
says it was made in Taiwan. Diagnostic with Diamond Edge says that the HD
is okay.

I'd appreciate opinions/insight fairly quickly because I need to make
a decision soon.

I have used the internet, www, and ftp (actually ncftp) for over four
years with almost the exact set up that i have now. The only change
is that I now use a falcon instead of a st. I never had these problems
with the st.

I tries to ftp a file today with the same results, 4 bombs that quickly
jumped up to 11 bombs freezing my machine. I did make sure that I was
in binary mode so it does not seem to be that. I really wish I could
figure out the problem.

Hi Jyri,
I just sold my Sportster USR 14.4 after trying to use it to fax
things. There was a problem with the first releases of the 14.4
USR. I don't know if your model is one of them but I heard that
a newer version of STraitFax works on these modems. Maybe
you could contact them (it's in the US I think but I don't have
any clue as to how to get in touch with them). By checking
with them and giving them your serial number I think they
sould be able to tell you if it's useable. I personnally never
could fax anything with COMA.

Best regards,

Richard Lemay.

Hi,
I am using an ACER 14" multiscanning color monitor, model#
7015. I made an adaptor from the atari to the 25 pins
connector of the monitor. I am currently using it on my Falcon
as a VGA monitor with a different connector. I can get all
resolutions. Great thing if you can get one.

Richard Lemay.

NOS will handle dynamic addressing - just put 0.0.0.0 in the STARTUP.NOS file as your address. It will complain about "Unknown Host 0.0.0.0" when you fire it up, but after connecting, it will get the correct address. You can see what address you got with the "tcp status" command.

>and justify that since the ST is still the same its better than the current
>platforms and that people do nt need it.

When will you get it through your thick skull that they don't give a damn?
Their machine suits their needs. They don't need new hardware or software
every 6 months to support some bums in Glendale or Redmond.

NONE of the 'advances' that you've brought up have been at all substantial...

Also, your claim of no progress is just plain wrong.

>> Why would we want it to...your constant knocking of Ataris reminds me of
>> a little child..who in the playground declares my dad can beat your dad..
>I am not knocking the Ataris but the ones who knock other platforms. What\

BULLSHIT! That's all you ever do.

Then you become amazed when you actually manage to irk someone on their
own turf.

This is not comp.sys.mac.advocacy.

You act as if it were.

>comes around goes around.
>> I think it is time you grew up and spouted your wisdom (contradiction in
>> terms though it may be) to people who give a damn..
>No sir, its you and the other Jihad's who attack personaly because you have not
>arguments.. You sir need to grow up..

This is beyond absurd. You hide awhile hoping that the inferno caused by YOUR
own previously supported claims have subsided then, you accuse others of what is
you very own trademark.

Classic case, example: K12 app: DTP program.

Stop projecting.

IIRC it doesn't set up the FATs properly - for instance many old disk
analysers would complain about non-existant problems. Knife-ST, ST-tools,
and old versions of Zorg did this. I havn't had any problems that I have
blamed on them (apart from "fixing" a partition with ST-tools which
trashed the partition).

The problem with Zorg was that it couldn't read cluster above a certain
number. When Atari originally wrote TOS, they originally used a signed
number instead of an unsigned number for the cluster numbers. This was
fixed in TOS 1.4 (IIRC) and so then you could use partitions of 32MB
rather than 16MB without resorting to BIG partitions.

Zorg used to say my HD had faults, as did Knife-ST (compare FATs), but
Correct (comes with Kobold) didn't, now Zorg says all is fine too!

If I was going to get a new driver I would probably get HD-Driver
(commercial) or CBHD (shareware). I think you need to reformat to correct
the bits that are wrong. IMHO it is not worth doing unless you are using
Magic and want background DMA transfers. Then you could reformat one
partition at a time (copying the data to an empty partition - does one
exist :-) - temporarily using Kobold).

As for Petey's wonder NT box, no one even sells them as home computers!!!
Awk...he really is a computer nerd throwing specialized and expensive
machines in my face. All I'm saying is IBM was to have a home PPC that
runs OS/2 and have on the fly translation like Power Mac's do.

>
> >should start showing up in the fall. Softwindows is a solution for ones which
> >speed is not important. For maximum performance Pentium cards are available.
>

Last thing anyone should want is an expensive computr, unless you're a
hardcore geek like whats-his-face :)

Power Macs are nice as is MagicMac, but to have all of that and just a
486 card with the overdrive slapped on is just way to much.

>
> >These solutions have no peers in the hack/slash Atari ST world.
>
> None contemporary.
> However, you conveniently neglect information that detrimental to your

This was when the ST was more powerful than the PC's and Mac's at the
time. Now you can run emulators on the mainstream machines and it's
better. This is great! :)

> >> Mr. Maddog
(Unneccisary remark by smart-mouth)
> >Who needs cutting edge hardware & apps, thats why I love the ST!

If I want a spreadsheet program for my ST, I can just download it from a BBS and it does the same amount of work as the bigger ones for the mainstream computers. And I save these: $$$$$$$$$$$$$$$$$$$

> The edge that cuts can make you bleed...

Learn to use the edge to you're advantage and you are the one cutting :)

> A note to Mr. Maddog: Are you the same bloke that has a column on page 66
> of the July issue of the Linux Journal... (just curious)

Naw, I don't even have Linux or a computer to use it. :)
However, if I can just use the Caldera desktop(under Linux) and run DOS games and some way to use 32-bit Window games then I'll never even look at Windoze95 again. :)

Well folks, this has been fun but I will no longer respond to whatever that goofball Sinclap says. Not only are the postings of his unreasonable, but it's not worth the waste. I may not have a killfile or no how to use it on my shell account, but I can always delete the ones that have the big fat all-captials name of his without even reading it.

Thank you and good night from...

[snipped, questions covered in other posts]
>Is there a program anywhere for either falcon or unix that I can use to turn mpeg2 audio
>files into somthing I can use with the falcon?

I found this on Hensa the other day.
Hope it helps.

Title: mp2
Author: Fredrik Noring (noring@lysator.liu.se)
Version: 0.4alpha

Shareware: No
Machine: Atari Falcon
Operating system: TOS
Directory: micros/atari/falcon/a/a110
Date mounted/updated: 01/05/96
File names: mp2ad.lzh
Unarchived files: 14
Unarchived size: 140205

Description:

This alpha version of mp2 replays (in realtime) almost every
standard MPEG2 Layer2 44.1kHz Stereo Audio frame (no CRC).

There are two versions of the program. (the Falcon do not support
44.1kHz sound without an (22.5792MHz) external clock)

* mp2e.ttp is the external clock version with high sound quality.
* mp2li.ttp uses linear interpolation for 44.1kHz to 49.17kHz
conversion (no external clock is needed). This reduces sound
quality significantly.

To be done:
* mono
* 32kHz and 48kHz
* more bitrates (only 128kbit/sec and 192kbit/sec are tested,
others might work)
* CRC check

Music can be found at IUMA (the Internet Underground Music Archive)
http://www.iuma.com

Message-ID: <4runrv$ipa@teeri.jmp.fi>
Source record: 142129

Hello!

I've been fighting to make CoMa 3.40 work with my USR Sportster Vi; when I try to send a fax, I just get the "Modem reports error"-message.

I've tried setting the fax class to 2 and 2.0, but that seems to make no difference. On the modem init-line I've got only "AT".

If I've understood correctly, CoMa should create a file MOD_PROT.TXT which is a kind of a modem communications log. I've tried both CoMa 3.30 and 3.40, but neither of them creates the file. CoMa 3.10, however, does. Searching the log I could find only one error:

CoMa: AT+FCLASS=2
modem: ERROR

Everything else seems to work out just fine.

If you've got any idea what could help, please mail me! Thanks a lot!

- Jyri

P.S. How difficult is the "38400 baud serial port" hardware modification to do for a Mega 4?

For a Megafile60 you don't need (cannot use) a host adapter at all. The
Megafile has its own interfache, i. e. you can connect it directly to your
Atari.

I have been using Prism Paint (from ST format disk 48) for a while now
and it handles GIF 87 and TIFF + NEO and Degas (normal and compressed).
I have never used the TIFF option but it will save both whole pics and
clipboards as TIFFs. Darn handy program but the GIF coding it uses
upsets other GIF programs such as MGIF.

There is a real time mpeg2 player for Falcon made by Noring/NoCrew. This can't convert into other formats though. It can be found through NoCrew's homepage at:
http://www.dd.chalmers.se/~f93labr/nocrew

There are packages for converting to/from mpeg2 with c-sources. I don't remember where it can be found but I know one package is called "mpegaudio.tar.gz".

Regards,

Tomas

Oh dear - All stop on the USA Monitor front - To post two monitors will
cost 130 Dollars - Which rather negates any saving !

So it's back to the Mono 124 and Philips TV / RGB input and an eye on
the UK second hand market - Assuming a few more Registrations come in
for Lottery Companion that is ! - Version 4 almost done :-)

Don at Atari USA was very helpful - So now you know the cost you don't
have to bother him!

ALB - And thanks for all your help.

Mark Butler, Atari ST Shareware Programmer.

Yes, it's fact. Syquest has lowered the list price of the EZ135
to $119.95 so they can sell the new EZ230Flyer at $299. These drives use
compatible media so 135 Meg cartridges can be read, written and formatted
on the EZ230. They haven't said publicly that the EZ135 is being
discontinued, but it's quite obvious.

I could not get ACC.PRG to work on my TT either. It does work on my Mega STe
though. Maybe it has to do with the CPU.

455. Help! VT100 console driver for Kermit???

Newsgroup: comp.sys.atari.st

460. Re: Should I buy this Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-07-10 00:00:00 UTC
From: dpj@delphi.com
Message-ID: <JHPNG8I.dpj@delphi.com>
Source record: 142066

The Falcon you've seen is not a prototype, but a typical Falcon. The two that I have are similar in design (dark grey keys and light grey case). However, I believe that the earlier-released Falcons had 60-meg drives installed (such as the one you're checking) while the later ones had an 85-meg drive as stock.

The Falcon is a nice machine, especially if it fits your specific needs or desires. I don't regret buying mine. If you wish to stay with TOS-based machines, the Falcon is the way. If you have the money, the "new" models are supposed to be really nice also.

Atari ST series Computers and Monitors.

Introduced in 1985, the Atari ST series was Atari s answer to Apple s Macintosh. They used Motorola 68000 chips and had a graphic desktop user interface. They couldn t compete with giants like Apple and IBM in the long run however, and eventually became defunct. Modern Atari computers based on their basic design are still on the market today.

Although its 8mhz clock speed and standard 512k might seem outdated by today s computing standards, the Atari ST had at least two very redeeming features. One: standard onboard MIDI ports which are still very fast compared to today s computers. Two: The first really good multi-player interactive game.

MIDImaze was developed in 1987 to take advantage of the ST s fast graphics and MIDI. One hooks up to 16 machines in a daisy-chain MIDI ring and fires them up. Then all the players run around a first-person-perspective maze and shoot each other in real time. It s a little like Doom Deathmatch with more players and less gore, and it remains popular today.

We run MIDImaze for no charge at Con of the North, our local games convention. We plan to take it on the road at some time in the future. To do so we will need more Atari STs.

Absolutely any Atari ST or the later TT or Falcon will work for the game, so we are interested in any and all of them. We would prefer models with RF modulators because they are easier to modify for use with composite color screens, but if your computer does not have one and you have an Atari monitor for it we ll probably want it anyway. Old style 520s with no disk drive and 512k are just fine!

We are willing to pay $30-50 per computer or monitor, and we are also willing to pay shipping. If you live in the Twin Cities Area, we will even come and pick things up. Bonus!!! If you live in the 5 state area (Minnesota, Iowa, Wisconsin, the Dakotas) and donate an ST or two to the cause, we will come to your local games convention and run MIDImaze there!

PLEASE MAIL ALL INQUIRES AND RESPONSES DIRECTLY TO: jabeecher@aol.com.

If you are reading this and have any suggestions where we might post this to better effect, please do not hesitate to tell us.

Thank You for your time!

s> Think I will wait until I get local BBS taking echos? fanx though :)

You could go one step up from QWK, you know. Set up a point system using Avalon or a similar package (I think IOS, Binkley, and LED would be the cheapest route), and arrange with a friendly sysop /anywhere in the world/ to become a "point" off his BBS. Then your messages will arrive via Internet email; using Wormhole or Net2Net, you then pitch them to the usual Fido-style message bases.

From: Michael_Depke@b.maus.de
Message-ID: <199607102116.a56557@b.maus.de>
Source record: 142071

Hi Jyri!

JPH>I've tried setting the fax class to 2 and 2.0

The Sportster can only handle class 1 and 2.0, *not* class 2! With CoMa
you can only use class 2.0.

JPH>If I've understood correctly, CoMa should create a file MOD_PROT.TXT
JPH>which is a kind of a modem communications log. I've tried both CoMa
JPH>3.30 and 3.40, but neither of them creates the file.

Excuse me asking: Did you activate 'Parameter - Modem protocol'? This
should work as it's got nothing to do with your modem.

JPH>CoMa: AT+FCLASS=2
JPH>modem: ERROR

Ooops! This *is* from MOD_PROT.TXT! Your Sportster replies ERROR
because ... s.a.

Michael

graphic@delphi.com wrote:-

>I have only found 1 shareware program to view JPEG's on my stock (1meg)
>Atari 1040Ste, but it requires more than 1 meg of RAM.
>Are there any programs (and what are their names) that will run on a 1 meg
>machine, stripped of all desk accessories if necessary.

You may well find that 1 meg just isn't enough to handle the files themselves: The program has to hold both the jpeg compressed file and its uncompressed version in memory at the same time, as well as having the relevant coding for decompression, display, and usually manipulation and conversion to other formats. On a one meg machine this is not easy to handle - some of the files will fit, others will not. Given the low price if RAM these days, why not get hold of a bit more? Then try the excellent MGIF5 - easily the best viewer around IMHO!

Best wishes

Andrew

476. Syquest 135 Meg Removeable Review / Info..

Newsgroup: comp.sys.atari.st
Date: 1996-07-10 00:00:00 UTC
From: m.harvey@ix.netcom.com
Message-ID: <4rvca2$brd@dfw-ixnews10.ix.netcom.com>
Source record: 142139

For those of you whom might be interested.. I just got my Syquest
135 meg removeable hard drive today from Toad computers.
This thing is amazing!!
Quieter than my internal drive on my clone, selectable SCSI addresses,
come complete with 1 cart and a coupon for a second cartridge.
(NOTE: Expires 7/31/96) and Toad is selling this shipped for $129.95

Guys, Gals, if your looking for a good backup media, or even a hard
drive to use on your ST.. This should be a very big consideration.

Yes, I know about Syquest, I have (2) 44 meg drives and about
14 cartridges now also, but when one of the above 44 meg drives
crapped out, I choose to go ahead and move up to the 135 meg over
replacing it. And it's well worth it. No more loud noise at it
reads/writes to the drive, in fact, other than the lights, it's hard to
tell it's even on. It's running right now less than 3 feet from me and
I can't even hear it as I type this msg. Just thought I'd tell you all
some about it. Hadn't hooked it up yet on either my Atari TT or the
Mega.. But, I'm sure it will work fine. If you have any questions,
feel free to e-mail me.

Mike Harvey

Sad thing is: Syquest discontinued this drive a few days ago, so i doubt it
is a good buy in the long run...And since Jaz drives are now down to $399
and should work fine as a SCSI device on all ST's i'd vote for this one.
But this is just IMHO.

^^^^^^^
That converts to roughly 95 UKPounds. How much does this drive sell for
in the UK, and where do I get one?

Anyone know?

Thanks,

Ali.

480. For sale: Atari Falcon (UK)

Newsgroup: comp.sys.atari.st
Date: 1996-07-10 00:00:00 UTC
From: sherwood_piers@jpmorgan.com
Message-ID: <4rvvjh$rp3@hardcopy.ny.jpmorgan.com>
Source record: 142143
Cross-posted to: uk.adverts.computer,comp.sys.atari.st,demon.adverts

I am selling my Atari Falcon 030 along with some bits and pieces.

Hardware:
- Atari Falcon 030, 4 MB RAM, 127 MB internal IDE disk,
68882 FPU, PowerUp 32MHz accelerator, VGA adaptor
- External 500 MB SCSI disk & cable
- External Zoom 14.4 fax modem & cable

Software:
- Hisoft Lattice C compiler 5.6 (Falcon enhanced version)
- Outside virtual memory manager (comes with HDDriver)
- BlowUp software resolution expander
- Gemview (registered)
- Lots of other public domain stuff including a full installation
of Linux on the external disk (GCC C/C++ compiler, X windows, shells,
man pages and all the usual bits and pieces) and a box full of
magazine cover disks.

All hardware and commercial software is boxed and with original manuals
and everything is in excellent condition. The Linux installation is a
very useful multiuser/multitasking Unix environment and will happily compile
C++ programs under X Windows. OK, so it's not going to break any speed
records... but it's fun!

The price: 675 ukp or best offer

Piers Sherwood

email: sherwood_piers@jpmorgan.com (work)

In actuality, XBoot 3 does work perfectly with the Falcon. However, if
it's killing you, try out Stoop 1.05. It's very good.

No - get one of the other Kits, not the MDK. I gave up supporting
that several years ago, and the TAF/KGMD ones are far more up-to-date.

I will not be updating the MDK in the future either... I've got me
an SGI Indy workstation now, not an atari, so the Falcon doesn't
even get switched on :-)

ATB,
Simon.

Gustavo Comezana (comezana@math.psu.edu) wrote:
: I wonder if there are people out there who have succeeded in
: running Lynx under Mint/X. Could somebody give a hint
: about the terminal settings? I have my term variable set to xterm and
: TERMCAP pointing to /etc/termcap, which I believe is the correct
: setup. Lynx does start up, but the display is a complete mess. I tried
: giving it the command line option -term=xterm, as well as unsetting
: TERMCAP, trying other values for term, and all the possible
: combinations and permutations of the above, to no avail. I read the
: man page and tried to find something suitable to edit in lynx.cnf,
: again with no success. Any help on this would be greatly appreciated.

I seem to remember that lynx uses ncurses and the terminfo database and
not curses/termcap. The archive of lynx that I grabbed (2.3.7?) had a
terminfo database in. However, I don't know if there was an entry for
xterm. You should be able to grab one from /usr/lib/terminfo/x/xterm
on any machine with terminfo. There is also a master terminfo database
but I don't have a pointer for it.

Of course, I could be completely wrong and lynx is using termcap. In
that case, look for an xterm entry in /etc/termcap.

As a last resort, set $TERM to vt100, as an xterm is pretty much a vt100
with small/changes editions.

493. FX card

Newsgroup: comp.sys.atari.st
Date: 1996-07-11 00:00:00 UTC
From: leslieh@valis.worldgate.com
Message-ID: <4s3se2$fja@scanner.worldgate.com>
Source record: 142006

I have just bought an FX card for my Falcon (not installing the accelerator or the screen expander (yet)), but when I plugged it in, and put my 30 pin SIMMs from my STe (1 meg SIMMs) onto the card, it told me that Bank 0 was not able to use them (yes, they work perfectly in my STe), and I'm assuming that the system was unable to check Bank 1. The software recognises them fine, just not at booting (in other words, I am unable to use them), but only at configuring. Also, just before I took out the board, the monitor started flashing on and off. When I took the board out, the monitor went back to being rock steady. Is there something I should be doing, or is there something that I have already done that I should not have? Any responses will be gratefully accepted.

> MPEG audio players?

I have noticed this problem on mp2 samples with 192 kbps bitrate.
I use mp2li.ttp using linear interpolation, since I don't have an
external clock (yet).
Noring, who made the player, doesn't hear these sounds when using
the mp2e.ttp with an external clock.

When playing 128kbps samples, I haven't heard this.

I haven't heard of any other mpeg2 audio player to Falcon. There
is a package with sources for encoder/decoder for mpeg2 audio,
but this doesn't play them in real time.

> Does anyone have any ideas about this?

Try using Kobold when you copy/move. It's much faster than TOS
and I have never had any troubles with large files.

> Matthias

This is misleading, as far as I know. The price on this drive has been slashed because there is a price war going on between Syquest and Iomega on the low end drives (EZ135 vs. Zip) NOT because it has been discontinued.

And there is a BIG price difference between $119 and $399. Many of us can afford $119 readily but not $399.

If you have any confirmed information that the EZ 135, I'd like to hear it, but as it appears right now, if anything, Syquest is gearing up to sell MORE of them, not discontinue them. (If anyone knows for sure they are planning on discontinuing this model, I'd like to hear about it though)

Just got the August issue, and surprise, surprise, it still hasn't made it
to the disk. However, once more they intend putting it on next month's
disk. And there was no mention of it being the last issue, and until I see
it from them it'll keep going.

>There is this wonderfull tracker for Falcon which is called Groumftracker.
>It is fabulous, 32 tracks, 16 bits, 50 Khz. In the Shareware version 070,
>I think, there are the sources in GFA and C.

Replay sources (and a module conversion program) are included with the registred version of Graoumf. Version 0.70 is very old, about a year, there is a 0.85 at ftp.cnam.fr... if I remember well 0.70, the 0.85 have better sound, supports more modules formats (MMDs from OctaMED Pro 3 on Amiga, ULTs from UltraTracker and XMs from FastTracker 2 on PC, and all sorts of DTMs from Digital on Falcon), supports MIDI input, have programmable envelopes on samples (envelopes of tone, volume, and stereo panning...), saves/exports not only GTKs/GT2s, but also MODs and S3Ms, have a sample editor, support multiple samples for an intrument, and have a song-to-disk function (records a big sample with the replay of a module). fffff! forgotten something?

The author is working on MIDI support, and is converting to C all parts of the tracker written in GFA basic. A next release will also import E669 modules.

>I am not a programer, I it would be a good idea to make a little player
>for this format (GT2). Every codes are already given, the programer would
>only have to make a little interface to play those modules. It would be
>very, very nice. Finnaly a very good sound quality from the desktop will
>demonstrate the infinite possibilities of the FALCON.

I think someone is actually coding an ACCessory GT2 player, but have never seen it... I don't remember who it is, surely a french guy.

PS: Your email address is not coming through the news header.

507. HSmoda07 is here, and it's better!

Newsgroup: comp.sys.atari.st
Date: 1996-07-11 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4s1q66$s2r@madeline.INS.CWRU.Edu>
Source record: 142075

Well, I got hsmoda07 from
ftp.uni-kl.de in /pub3/atari/incoming.
And its definitely changed! All modules must be used from the same version.
I translated the documents with ruftrade2 (a registered version that
does big files) and there are several BIG changes. Among them:
1. On a TT, modem1 can now be redirected to modem2 OR to serial 2!
I had uniterm which runs in modem1 only. with 06, one could redirect it
to modem 2. With '07, it now runs fine on serial 2, automatically.
2. I can't yet SWEAR, but it seems some bugs that USED to cause missed
chars is fixed!
3. Other changes are there, too, but I can't enumerate them all.
:-)))
P.S. Ruftrade 2 was well worth the 5 pound/$10 registration fee.
Especially if you don't know German.

^^^^^^^^^^^^^ ???????

My original question as to the reliability of the information
stands. I asked for *solid* info, coming from a reliable source, not
educated guesses. Rumor-mongering is the last thing one needs in a
confusing situation. The press release about the lowering of the EZ135
price (available at SyQuest's WWW site) says nothing remotely like
what's been suggested above. I have written to SyQuest's customer
support and will report in this forum whatever the official word on
this matter is.

Has anybody tried out MPGFEVER (available at umich.edu)? No matter how hard I try, the 68030 encoder refuses to work on my Falcon, although the 68000 version does run (well, in a manner of speaking... more like crawls). I tried on a completely clean machine, with and without MINT, Geneva, Magic, you name it. It just does not work (at least under Geneva I get a "reserved vector error" message). Any tricks or incantations that people out there know of?

Gustavo

Not knowing about this program, the 030 version might have been made
for the TT and need an FPU too. The reserved vector error sounds
pretty much as if this was the problem.

Solution: Get an FPU! :)

I could not get a brand new Quantum Fireball 540 meg to be 'seen' by my
Mega STe. I connected it externally via The Link 2.
I tried ALL the usual stuff but without success.

It is a SCSI 3 drive. Is this the type with SCSI bus arbitration that
just won't work with Atari's ?

TIA, Julian.

527. Re: Falcon Software?

Newsgroup: comp.sys.atari.st
Date: 1996-07-11 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <DuD8LG.H0s@info.uucp>
Source record: 142095

Well I would like to offer alot of thanks to everyone who has
responded here and in email to my problems and software requests.
So far with the help of people here, I have been able to:

1) Find a copy of Stoop, it's key, and install it.

2) Find a MPEG2 audio player. (MP2E.ttp) *though I seem to get
background noise that sound much like tiny wind chimes in the
background. Is this normal? Are there any other recomended
MPEG audio players?

3) Start solving my downloading problems. (very good!)

It was interesting to find that somehow my dir. with archiving
programs had been aftered so that while my LZH prg and my ZIP
prg looked like they worked fine when both files needed replacing.
I replaced these files and have yet to have a problem with file
transfers/compression on about 10 tests.

The bad news is that there seems to be a problem with my Falcon.
I have discovered that I cannot copy/move large files on my SCSI
drive. When I try to move/copy these files to either different
folders on the same partition or other partitions the operation
starts and then my machine (Falcon MKI, BlowUP FX) bombs.

Does anyone have any ideas about this?

Thanks for all the help so far!

Keith

ps: I just read on the Cubase mailing list that CAF 2.06
should be up on the Steinberg web site. Excellent news!

: >Naa you can never have enough mod players.. :)

Hi, RIGHT for modules in general but for MOD files I think we have enough.
Anyway. There is this wonderfull tracker for Falcon which is called
Groumftracker. It is fabulous, 32 tracks, 16 bits, 50 Khz.
In the Shareware version 070, I think, there are the sources in GFA and C.
I am not a programer, I it would be a good idea to make a little player
for this format (GT2). Every codes are already given, the programer would
only have to make a little interface to play those modules.
It would be very, very nice. Finnaly a very good sound quality from the
desktop will demonstrate the infinite possibilities of the FALCON.
Thanks.

> handle - some of the files will fit, others will not. Given the low price
> if RAM these days, why not get hold of a bit more? Then try the excellent
> MGIF5 - easily the best viewer around IMHO!

Oh, you can decompress jpeg without holding the original picture in the
ram. You can even convert them with just enough ram for the code and a
few bytes free. Don't ask me for a program that does that, but
theoreticaly it is possible to just handle the data on Disk.

Christof
PS.: If other file formats can be viewed then ther eshould be enough ram
for jpegs of the same size. Actually jpeg files are normally much
smaller than others like TIFF, or GIF, or IMG, etc.

Yes, as a matter of fact I'd considered trying the same thing,
but hadn't gotten around to it yet. How much of the whole package
can you include in the Atari version? The more the better (aside
from options that would be useless on a non-networked, single-
tasking machine), IMO.

If you need help, I'd be glad to try.

> baud serial port speed..:(

Didn't I read in the CoMa documentation that the Sportster Vi could do voice at 19,200?
(Vaguely from memory)

I'm using CoMa 3.40 with a USR Courier V34+ without problems.
(Of course that modem doesn't support voice as the Sportster Vi does)

The problem with usr modems and the earlier versions of CoMa was that at the end of a page the modem reported a page error and no more pages were transmitted (unless you used the switch to ignore page errors).
I can confirm this is now fixed in 3.40.

You shouldn't need to manually set the modem class as CoMa does this all automatically. If you are having problems then you could set the option to log the modem-CoMa dialog to disk (mod_prot.txt?). Careful examination of this log may help.
Email one to me and I will try and interpret it for you.

The thing you do have to watch out for with Courier modems is the setting of ATS0. (I hope I remember the correct one). If it is set to 0 (i.e. don't answer calls) then the usr modems don't count the number of rings in ATS1. It is the modem's internal count of the number of rings which CoMa uses... so if you want it to answer incoming calls you have to set ATS0=255. Also (for the Courier at least) you need to set the dip switch to enable call answering or every ATZ resets ATS0=0.

536. Proposal: alt.binaries.atari

Newsgroup: comp.sys.atari.st
Date: 1996-07-11 00:00:00 UTC
From: Rich Tietjens <RichardX_Tietjens@ccm.jf.intel.com>
Message-ID: <31E550DA.261E@ccm.jf.intel.com>
Source record: 142104
Cross-posted to:
alt.config,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.st.programmer,comp.sys.atari.advocacy,comp.sys.atari.8bit

The proposed group would serve as a place to exchange small patches, release small shareware packages and updates to existing packages, post items that have been requested in one of the other comp.sys.atari.* newsgroups, and so forth. There has been some discussion of how to handle Atari binaries since the closing of
comp.sys.binaries.atari.moderated
and the general consensus in c.s.a.s has been that a dedicated newsgroup is needed; it is inappropriate to post large binaries (>16k) in any of the existing groups, and if this proposal is approved, it will then be possible for those users who do not wish to download binaries to simply not subscribe; at present, someone will post a binary from time to time and users who must pay for on-line time, and who do not want the binary, complain (quite reasonably so).

Comments welcome. Flames to dev/null, thanks.

Actually, anything short of a Falcon or a TT requires a Link96 to use that particular drive. (You will also require hard disk software that supports bus arbitration, like HDDriver, HuSHI, CBHD)

```
=== RUN TRS-80 SOFTWARE ON YOUR ATARI ===

Now you can download the TRS-80 model III emulator. The package
includes basic programs, machine language programs and NEWDOS/80 on 3
virtual disks. It also has a MagicMac compatibility mode and runs in
ST high. The zipfile is about 370 Kb. To download it go to
http://www.pi.net/~volatile/

Using the included SPEED.BAS the following speed results were obtained
(all numbers relative to a 2 Mhz TRS80 model III)

Tested item ST STE Falcon16 TT* 630**
-----------------------------------------------------------
Integer 43 85 83 170 510 %
Floating Point 32 59 60 121 392 %
Memory 45 86 88 182 530 %
Text 170 311 311 530 1766 %
Scrolling 60 131 217 333 714 %

* TT RAM
** Apple Performa 630 running MagicMac 1.2.5

(for these tests the options "disk system" and "speed adapt" were
disabled, "video acceleration and clock adapt" were enabled. The real
time clock was set to "normal")

542. MegaFile Power Supply

Newsgroup: comp.sys.atari.st
Date: 1996-07-12 00:00:00 UTC
From: dooley@berlin.infomatch.com
Message-ID: <4s717i$9md@berlin.infomatch.com>
Source record: 141960
Cross-posted to: comp.sys.atari.st,compsys.atari.st.tech

Hi all!

I was wondering if I can get some technical help with a MegaFile power supply and PC board..

I took the host adaptor and power supply out of the megafile and also the drive! I modified the host adaptor to add another hard drive! So I know can use 2 hard drives with the Megafile! My delimna now is that My power supply is freaking out on me and I want to use my old PC power supply!

This is where I need you help!!

The PC Power supply is color coded and It has the code on the power supply but the atari is a little more difficult!!

There are 6 wires that run from the power supply to the atari host adaptor board and all I know is that the BLUE wire is +12v but not to sure of the rest!! I think the next 3 black ones are grounds and the last 2 red ones are +5v

If you could help me with this I'd very much appreaciate it!

It looks like this if you are looking at it from the TOP - DOWN

```
_______________ BLUE
_______________ BLACK
_______________ BLACK
_______________ BLACK
_______________ RED
_______________ RED
```

So if you know what voltages these wires are please
e-mail me at: dooley@infomatch.com
Thanks Very Much!

John Dooley

: Is there any version of X11 for Atari with color support?

The version(s) available for Linux are supposed to support all colour modes, including graphics cards. The NetBSD version supports colour on the Falcon. Both, of course, will require an 030 machine with an FPU, and 8 megs and plenty of hard disk space will be a necessity.

>partition F:\ as it is.

Its not _that_ bad... especially for such an experienced user as
yourself.

I always use DLII for editing stuff... because it a)works, b)cost
me nothing, c)doesn't work with complicated buffers and stuff like
Knife-ST.

Just load the appropraite file into the sector editor... search for
F:\ and then change it to E:\ or what ever partition you want it on.
However you _MUST NOT_ change any other data, simply the drive letter.
DON'T start writing in folder names, like changing F:\ to
E:\UTILS\GHOSTSCP\BINARIES, wiping over what looks like junk... this
WILL kill the program.

Also work on a backup... just make a copy of the file you intend to
change, and if things go wrong... there won't be a problem.

ATb.

Slow down one sec....

Yuo say you are getting fido news via internet ???

How ???

If someone who knows could sting a few sentances together to answer
the following maybe this would help me out:

i)Which software is required.... and what is the purpose of each
ii)How is the fidonews thing collected via the internet (with NOS) ???
iii)what is the address needed ?
iv)does this cost anything ?
v)are there any limiting factors.. such as BBS hours, slow downloads
vi)which software do I need to read and reply to the mails ??

vii)how are the replys sent ??? (FTP, Telnet ???)

I've been thinking about all that I'm missing out on in terms of fido nes etc.. not calling BBSs but Demon instead.

However as there are no good BBS local to me, I'd rather get c.s.a.s cheaply than fido expensively or not at all. So If there is a way I can get the stuff via my (local) demon account then that would be great.

Thanks in advance

>Does anyone know if it is possible to 'copy' a page of text from a web page
>displayed in CAB to a text file? ie. to the clipboard.
>
>CAB doesn't seem to have a 'copy/paste' type facility. Which is a shame.

Hmmmm... just done some checking.... the old version of CAB (in pre
WWW131) had an option to set a viewer for the 'source' (what you
want). However the current release of CAB seems to want to view the
source itself. (if you were using the old version, se the viewer to a
WP, such as Everest... and then you can click on view source... and
save out as a text file from the WP).

With the current release it seems that your best bet is messing around
in the Cache folder... and try and find the correct .HTML file, copy
and rename it to somewhere else, and then load _the copy_ into your
WP.

You can find out what each of the HTML files looks like, by loading it
into CAB (offline).

Other than this I don't think there is currently a way.... However I
believe there probably will be ways, including a Cache tool (so you
can see which page is which) in future releases ???

>
>Is there a program that I could run over the .htm file to strip out the html
>commands but leave the actual content in a readable form?

Never seen one.... have you tried search and replace in a WP ???

search: <*>
replace:

so it should get rid of the tags... works on Everest I know (just
tried it...)

>from Europe won't run unless I change it.

don't you mean 60Hz and 50Hz ???

as for changing it:

If you have a copy of GFA Basic around IIRC:

SPOKE $FFF820a,-2

and

SPOKE $FFF820a,-4

switch between 50 (-2) and 60 (-4) Hz

(Nb. I think -2 and -4 are meant to be other values (like 1 and 2) but
these worked... and I couldn't find the real ones.)

If you want a program writing for you to do this (because you can't
find one ???) contact me.

stosser@airtime.co.uk (Tony Greenwood) said:-

> Ok, I can't solve your problem, but can explain for future reference
>to this and other STOS programs,
> If STOSFIX 3 does not fix the program, then Generic Fixer will not,
>they both use the same code, (well the last version I had they did)
>
Thanks for that....

the strange thing is that STF who put the program on their
coverdisk... said in the magazine:

"By: MegaGold
Machines: All Ataris (TOS 2.06 and Falcon wit a STOS fix utility)
Resolution: ST low
..................."

Now I'm _not_ going to say STF was wrong here, but it looks like one
of 2 things happened:

i) They didn't check properly and presumed as it was STOS it could be
fixed

or

ii) They are using a _different_ STOS fixer... ie not STOS fix, or the
generic fixer.

If the first is the case...: please check properly next time... it
saves a lot of hassle (also makes people wonder in the future...)

If the later is the case...: please tell use which fixer we need ! :)

To be honest I'm not all _that_ bothered, I can live without another
dynablast type game... and I hope no one at STF is taking this post
the wrong way. I'n damn glad their is and STF, and everybody is
entitled to make a mistake (if it is one).

Having said that: does anyone have a cheap copy (say 5UKP) of Dyna
Blasters that they'd want to sell ???

From: phil4@phil4.demon.co.uk
Message-ID: <837285006_OASIS_@phil4.demon.co.uk>
Source record: 141970

Original CPXs were limited to the same screen size as XControl itself.

As ZControl is takes up more screen space... is there any chance that
future CPXs will make use of the available space ??? or is the limit
written into the code... and must reamin so for the CPX to work???

>TOS 2.06 doesn't need the patch. I also noticed that TOS 2.06 seems to
>keep better time than 2.05 did.

If anyone needs that patch let me know !!! I spent _hours_ trying to
find one that worked !!!

In case anyone's interested: TOS 2.05 has massively messed up flow
control... so using it at 19200bps with a 14400bps modem means data is
sent FAR to fast to the modem and things go wrong... _really_ quickly.

HSMODEM messes this up even further, because it speeds the modem port
up, but doesn't fix the flow control, so the problem occurs in half
the time :).

556. Oasis 2.05 problem

Newsgroup: comp.sys.atari.st
Date: 1996-07-12 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <837281856_OASIS_@husbands.demon.co.uk>
Source record: 141974

I've been struggling with Oasis2 ever since it was released, with all manner of problems. I use Oasis 1.35 with no problems at all and was looking forward to using the new edition, even pre-registered. But, no joy, I'm afraid! Boo! maybe someone else has the same problem - the main difficulty is the bad packets that I know a lot of people have been encountering. Was a fix ever found? If there was I don't recall.

However, one thing I'm finding very irritating is the inability to QUIT Oasis. If I click on EXIT from the menu, the thing locks up. I have to reboot completely. If I use a keyboard command to EXIT, the same thing. Screen freezes, mouse vanishes, full stop. I've done this running on a clean machine, same thing. It's frustrating to have to reset every time. Anyone else have this problem?

I have a 520ST upgraded to 2.5 Meg RAM TOS 1.2, with System Solutions 170 Meg HD booting from HDDriver v3.7, then using Superboot V7.

557. CAB and Mailto

Newsgroup: comp.sys.atari.st
Date: 1996-07-12 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <837281350_OASIS_@husbands.demon.co.uk>
Source record: 141975

Hi all.

I've seen stuff written about the Mailto problems with CAB and I have had problems too. The problem is the same in that when I go to mail Cab comes up with the request to insert a disc into Drive A and then bombs out on me.

I started fiddling with things and noticed something - when STiK is NOT enabled and you do a 'dry run' ie. go to a previously visited site where the site is loaded from Cache, and go to mail, Cab calls up the editor and goes through the motions fine, including asking for a title and sig file. In other words it seems to work on it's own. Then, ENABLE STiK and the whole thing crashes out as described above, whether you're on line or not.

Anyone else had this situation? I think I read that one of the updates has fixed the problem completely, so maybe this is all academic. Interesting though.

I have a 520ST upgraded to 2.5 Meg RAM TOS 1.2, with System Solutions 170 Meg HD booting from HDDriver v3.7, then using Superboot V7.

If you can't find an Atari drive to replace it with, you can replace the drive mechanism with an IBM compatible 720k mechanism. You may have to carve the plastic on the front of the drive to allow for a different eject button, etc.

I've even got one here that you can have, if you want it; and for what it's worth, Ive also got an Atari SF354 mechanism (single sided) that you can have.

: post large binaries (>16k) in any of the existing groups, and if this
: proposal is approved, it will then be possible for those users who do
: not wish to download binaries to simply not subscribe; at present,
: someone will post a binary from time to time and users who must pay for
: on-line time, and who do not want the binary, complain (quite reasonably
: so).

: Comments welcome. Flames to dev/null, thanks.

Is there a tag for this group? For example:

alt.binaries.atari Binaries for Atari computers

Also, is there an official charter? The first section at the top is
pretty good, how about something like this?

-----8<-----
This group is intended for the posting of binaries for Atari
computers. Examples of on topic posts include:

- Compressed files for the Atari of any type
- Patches to existing software for the Atari
- New, publically released software for the Atari
- Atari software requested by someone in another group

Examples of off topic posts include:

- Discussions or advocacy of Atari products
- Auctions or sales of Atari hardware or software
- Commercial software (WaReZ)
- MAKE.MONEY.FAST schemes and ECP/EMP

Again, this group is *NOT* intended for the posting of commercial
software. Commercial software may be posted ONLY if the current holder
of the copyright has agreed to allow public distribution of this software.

-----8<-----

How's that? Is it agreeable to everyone?

-Kyle R. Hofmann

> I have a problem with my new provider. Anyway..
> I grabbed a PRG called AHDIPATCH which modifies the file " AHDI.PRG " or "
> SHDRIVER.SYS" , and in this program I can modify the OSPPOOL:

The "OS pool" which this is probably referring to is a static memory area which the operating system uses to store information about allocated memory blocks, open files and directories and other pieces of info. Since this area is static, it won't be expanded automatically when it fills up during normal operation. You can, however, expand this area by means of special programs (FOLDRxxx.PRG) or similar features in most hard disk drivers, such as AHDI.

The amount of space in the internal buffer is often measured in "folders" - every folder which you open allocates a block in the OS pool.

Since you are working with a relatively new TOS version on your Falcon, you probably don't need to expand the OS pool except if you are running applications which allocate many small memory blocks or open many many files at the same time. BTW, if the OS pool fills up, TOS will alert you and halt.

I'm a little puzzled (not knowing *anything* about the organization of
the Atari groups, or indeed of the Atari itself): Rich's posting refers
to comp.sys.binaries.atari.moderated, yet that appears to have placed
binaries directly into a non-binary hierarchy. Was any such group ever
officially in existence (being Big-8, it would have had to pass a RFD/CFV
process)? I would have thought the most likely reason for the group to
have been, as Tom puts it, "expunged", is that David Lawrence has
conducted some Augean stable-cleaning. I can find *no* signs of any
comp.sys.binaries.* hierarchy, which is the way that I as a newsmaster
would like to see things remain!

According to my active list, there *is* a comp.binaries.atari.st, which
is indeed moderated. Was it perhaps this group that you and Rich meant?
If so, rather than creating a new group in the alt.* hierarchy (which
might take some time to achieve good propagation), why not simply appoint
another moderator, and start using the group again?

(I'd wanted to cc this response to Rich as well as Tom, but the latter
didn't retain the former's address in the attribution.)

Yes, Xfree86 witch comes with Linux68K and NetBSD, and OpenBSD. Those three Systems all need a 030er with fpu at least to run. The problem is not the speed of the systems (Linux is definately faster than MiNT), but they use special calls to get it running.

Hi all.

Just wanted to say something about the update-thing from Application Systems Heidelberg.
First of all I want to mention that the products they create are absolutely fabulous. Magic 4.0 runs stable and faster than anything I encountered in the past. Preemptive works quite well.

But: I think the update prices are unreasonable. I just bought Magic 4.0 a couple of weeks ago. When I called them to inform about the update strategy, they informed me of the price of DM55 (average). That is without shipment.

Having only had the package for that short a time, I should think the update to be delivered by only calculating shipping costs. That is _way_ more reasonable.

Still, even without the update it is a fine product.
What are the changes BTW? Only win95lfn?

I considered that, and would have preferred it, but when I submitted the
proposal to one of the group mentors, I was informed that, precisely because
the existing moderated group had been killed at the request of the moderator,
it would be extremely unlikely that a new groups would be approved. Alt. groups
are far easier to create (anyone who doubts that should start counting alt.
groups in his NG file <G>), which is the logic behind the current proposal.

The "existing" group was removed (rmgroup) in March or April. If your
ISP says otherwise, then they aren't keeping up with changes.

I thought posting the charter was a bit premature, but this one is almost perfect.
I suggest we adopt it as the "official" charter.

Again, comments welcome. Flames to root@uni.edu <EVIL GRIN>

I was informed by Derek Mihocka that Gemulator ver. 4.5 is to be released this month. It may have already been released. I have tried to access the Gemulator Upgrade section of his web page, but after a few email messages and filling out the online registration form, he has not validated my userid (and yes, I mailed in my registration card.)

Does anyone know about this new version?? Where I can possibly obtain a copy?? And does anyone know why Mr. Mihocka doesn't answer his email?

From: gmiller@inca.co.nz
Message-ID: <4s67hv$2gr@inca01.inca.co.nz>
Source record: 142051
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

Posted for someone whose Usenet feed is still flaky (their comp.sys.atari.* groups are only getting about one article every few days)

I'll forward any responses I get...

--- SNIP ---

I am looking for someone with STOS experience who can help me with sprite collision detection.

In particular, I want to know how to detect whether two sprites have collided, and do something if they are touching. This is to allow the player's on screen person to "pick up" and object. The object would be represented by a sprite.

Any example code would be appreciated.

--- SNIP ---

Hi folks,

To cut a long story as short as possible, due to my own stupidity, my hard disk is currently "down". I fully realise I can be a complete plonker at times so I have lots of backups. Incredibly, it has been "inexplicable floppy failure week" - more died this week than have done in the last 9 years put together.

Consequently, it's going to take me some time to figure out what has gone altogether and what can be salvaged. I'll at least try to respond to email but don't expect miracles!

[feeble attempt at humour [sob]] ...

SwampDog paranoid quote of the week

THEY are *not* out there - THEY are in my sodding computer room, hopping up and down on my floppies wearing bloody great magnetic boots!

er I dunno! :-)

I'm not a legal bod but "expressed" should cover those cases where you
accidently write something that might legally imply a warranty of
sorts. "Implied" should cover those cases where you have to write
something to get you out of an inherent legal obligation, as much as
possible anyway.

Perhaps a quick visit to a Citizens Advice Bureaux? :-)

When it comes to JPEGs, the uncompressed version is usually very small
relative to the uncompressed one.
GIFs, which are usually very badly compressed, can even be larger than
the uncompressed image. Fortunately it's possible to load and uncompress
them with only a few kbyte more space available than the uncompressed
image needs. MGIFv5 can of course do that. ;-)

>> relevant coding for decompression, display, and usually manipulation and
>> conversion to other formats. On a one meg machine this is not easy to
>> handle - some of the files will fit, others will not. Given the low price

Yes, that's certainly true. There are not many pure viewers nowadays.

>> if RAM these days, why not get hold of a bit more? Then try the excellent
>> MGIF5 - easily the best viewer around IMHO!

:-)
MGIFv5 should be quite usable on a 1Mbyte machine, I think.
The default options file will give you two image buffers of the same size
(or only one, but then you can't load JPEGs), though, which is not a good
idea if you don't want to do any advanced image processing.

If you add '-p0 300' to the MGIF.OPT file, or give it on the command line
(or...), MGIF will set the first buffer to 300kbyte and the second to
whatever is left. If you have around 420kbyte or so free after starting up
MGIF (the startup dialog will tell you), you should then be able to load
and display most JPEGs up to 640x480.

By the way, while looking into this today, I realized that the -p0 and -p1
switches can fool MGIF into using memory it hasn't allocated.
That has been fixed now, but be careful not to tell MGIF to use more memory
than is available until the next release.

>>Oh, you can decompress jpeg without holding the original picture in the
...

>
>My program ALVI (alkor (jpeg) viewer) does this job.

:-)

>It needs 192 KB for the program (code+data+bss+buffers).

You're using the IJG libraries as well then, I suppose?
What version?

>It shows jpeg-files in b/w, with dithering and shrinking on the fly.

You don't have any plans on going greyscale?

>Every picture needs width * height bits of RAM.
>
>(Note: Mostly all jpeg-viewer needs width * height * 3...5 bytes for
> decompressing and converting!)

MGIF only needs w * h bytes (plus the file size and some overhead) when
you load in greyscale mode. For mapped or true colour mode the figures
are indeed in the 3..5 range, though.

For Falcons with JPEGD installed, it's possible that I'll make v5.10
capable of loading in mapped mode with the same space requirements as for
greyscale. On the other hand it might be best to wait with a few features
for another version. I don't really want another gap like 4.2->5.00. ;-)

>If you wanna show larger pictures, just activate shrinking by 2, 4 or 8.
...
>Its almost as fast as mgif, with shrinking its up to 3 times faster!

This shrinking is built into the IJG libraries nowadays, isn't it?
I'm unfortunately still using a very old version (v4 IIRC), since there
was quite a bit of interface code to write...

>(Shrinking by factor 8, picture STTNG166.JPG, 512x400 pixel, 43508 bytes.
>Time from start to fully displayed picture: alvi: 2.83 sec.
>alvi, no shrinking, same picture, 13.15 sec.
>mgif 4.2, no shrinking, same picture, time from start to first displayed line:
>10.21 sec., fully displayed: 22 sec.)

Hmm, that sounds very slow for the full display. Was v4.2 really that bad?
Anyway, the display should be a lot faster with v5.

What compiler are you using, by the way?
I don't see why you shouldn't get at least the same speed as MGIF on
JPEG unpacking. The newer library versions are supposed to be faster than
the one I use.

> What you are conveniently neglecting is the fact that NT was rewritten for
> the PPC. This is blatant mis-representation. When will a PPC run Windows 95
> WITHOUT softwindows or a CPU card.

No shit sherlock. But Windows NT runs on PPC. Thats upto MS when the WINDOWS
REACHES PPC. Solaris will.

> ,,,and typically cost more than a new complete system would
True. A Pentium card is a no brainer. We have the new Apple Pentium 100 card
at work. Cost a grand with eight megs and soundblaster support. You have to
weight the benefits to the negatives.. The Pentium card is true plug and play
compared to the desktop ones but at a cost.
> None contemporary.
> However, you conveniently neglect information that detrimental to your position
> once again: PC-Ditto & SpectreGCR

Yea, I take it that PC-ditto has a pentium version. Spectre was a Mac Plus
emulator. Now find emulator hardware that has a PPC...

> the edge that cuts can make you bleed...
You know from experience... Experince from Santanic activities....

[When the topic was changed to the above, the thread was cut-off from all
the Atari groups to which the original thread had been cross-posted.
Since Jonathon is providing some serious and significant information, I'm
merely intervening to re-post to those groups. It would appear that
there's been a vote on this before: where were all you guys at the time?
(Given that those who might want to do as Jonathon suggests already have
access to relevant "warez" group.) Once again, I no nothing about Atari
but am just a bystander that's interested in the machinations within
alt.config.]

>appreciate feedback on which monitors will handle all this. A 14 inch

NEC 2D and 3D, Panasonic C1391. I have used all of these with an Omniswitch.
The Omniswitch has both 9pin and 15 pin outlets, but most monitors have 15pin
to 9pin cables too (because most PC boards are 15 pin, the 9 pin monitors have
the adapter). If you need an adapter, contact Computer Gate (CGATE) which
advertises in Computer Shopper. They have 9 pin to 15 pin adapter cables for
many kinds of monitor (well, NEC and SONY .. you probably need the NEC type).

>someone please tell me which ones are? Thank-you.

Virtually any PC with a 3.5" drive can read an Atari 3.5" disk if it has been formatted as an 80 track 9 sector disk on TOS 1.04 or later (or has formatted or converted to MSDOS format by a formatting program such as FCOPY III or DCFORMAT, etc. PC's cannot read extended format ST disks (such as 81 or more tracks or 10 or more sectors per track).

If your PC only has a 5.25" drive, it may or may not be able to use a 3.5" drive without something more than a drive change. The original PC's (IBM PC andXT) did not have the BIOS necessary to use 3.%: 5" drives without a card that had
a ROM BIOS addin. Those cards (floppy controllers) are almost impossible to find nowadays because recent PC's have that all on their builit in BIOS ... so it depends on the age of your PC. Anything built after the mid-80's should be ok for a drive swap. You can get either a 720K (scarce) drive or a 1.44Mb drive. They both will read ST 720K disks.

611. Atari Binaries - Inaugural Message

Newsgroup: comp.sys.atari.st
Date: 1996-07-13 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <552425755.432033.A.starship@3rdplanet.com>
Source record: 141922
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.programmer,
alt.binaries.atari,alt.binaries.atari.d

This message inaugurates both alt.binaries.atari and
alt.binaries.atari.d

CHARTER:

alt.binaries.atari is for distribution of freeware, Public Domain, and
shareware patches, programs, etcetera, intended for Atari and
compatible computers. alt.binaries.atari.d is for discussion of the
content of alt.binaries.atari and should never contain binary files.

The following are explicitly inappropriate for posting to either
alt.binaries.atari or alt.binaries.atari.d:

- Copyrighted software without the EXPLICIT permission of the
copyright holder to post the software.

- "Chain letters," "get rich quick" schemes, for sale messages,
or commercial solicitations of any kind.

- "My computer is better than your computer" messages, or
discussions of the relative merits of any computer system. These
discussions properly belong in the various .advocacy groups (or
alt.flames in some cases).

- Any posting whatsoever by Peter Sinclair-Day; he does not own
an Atari or compatible computer, does not use an Atari or
compatible computer, and does not hold the copyright to any known
software.

Very large binaries (e.g., in excess of 500k) should be uploaded to an
ftp site (or several) first, and the availability (with full path)
announced in a.b.a; only in the case of a specific request by a user
who has no ftp access should such large binaries be posted to the
newsgroup.

It is suggested that a short text message be posted in a.b.a
immediately before posting a binary, explaining the purpose of the
binary, the copyright status and distribution policy pertaining to the
binary, system requirements for use of the binary, and any special
information which may assist in determining the desirability or
undesirability of downloading the binary.

This is an unmoderated group. However, it will be closely watched by
the undersigned, and any blatant violation of copyright law will be
immediately reported to the violator's postmaster and the copyright

holder. Violations of netiquette will be referred to the appropriate
postmaster if it is deemed necessary.

Message-ID: <837380724_OASIS_@phil4.demon.co.uk>
Source record: 141924

and no...this doesn't have anything to do with magic 5 !!! :)

I was told today about how annoying someone found my articles :(, due
to the fact that they weren't properlly threaded !

Apparently although under my Oasis my articles appear together with those
that it was a response to, eg. in the same group as RE: a discussion.
on his newsreader they do not.

On his newsreader they appear seperately... so he reads all the
artciles in the one thread... scrolls down a bit and then finds mine,
and understandably this can be annoying.

I think the problem is caused by Oasis doing the 'threading' just
using the Sybject line, and other newsreaders using other 'hints' as
well.

the question is: is this my fault, or down to Oasis ??? is there
anyway I can prevent it ?? and are my conclusions above correct ???

Source record: 141926

bbeck@netshop.net barked in comp.sys.atari.st on 12 Jul 96:

b> I remember reading some posts from people asking how to use the KILL
b> file in NOS. I haven't seen any repies on how to do it so I read the
b> doc's, tried a test and it works.

I did post a "how-to" but from what I understand, NOS 0.42 bombs when there
is a Kill file. POP3 works, however.

b> All you need to do is create a text file named KILL in the spool\news
b> directory and add the relevant line from the news header. So to get rid
b> of Sinclap all you have to do is create a KILL file with the following
b> line:
b>
b> From: sinclap2954@cobra.uni.edu (PETER SINCLAIR-DAY)

A better one would be:

From: *PETER SINCLAIR-DAY*
From: *sinclap2954*

That will get any message that his "real" name in the from line, /and/ any
message with his login name, even if he mvies to another host.

b> You will still get the header so you will know if he has posted anything,
b> but the body of the text will not be downloaded.

And if you use a pruge program to kill empty messages before reading, you
won't even see the headers. %^)

b> I'm using the pop3 version of NOS and it works for me. :-)

Likewise. My kill file is now 215 lines in length.

Simon@husbands.demon.co.uk (Simon Husbands) said:-

>I've seen stuff written about the Mailto problems with CAB and I have had
>problems too. The problem is the same in that when I go to mail Cab comes up
>with the request to insert a disc into Drive A and then bombs out on me.
>

The problem you describe is due to the fact that a variable in the source code
that was supposed to allow the *.SIG file to be copied into the mail editor
had not been initialised, this is what causes the prog to ask for 'Disk in
Drive A' and the subsequent crash..

The above explanation is direct from the author of CAB. He assured this would
be fixed in a later version. I have not seen an update anywhere, that is not
to say there isn't one.

I did post a disk hack fix some time back and until a proper fix is supplied
this is a way around your problem. Hack at your own risk though.

Colin Pells.

>few bytes free.

That's absolute true. And you can display it without holding the original
picture in the ram, too.

>Don't ask me for a program that does that,

ask me! ;)

My program ALVI (alkor (jpeg) viewer) does this job.
It needs 192 KB for the program (code+data+bss+buffers).
It shows jpeg-files in b/w, with dithering and shrinking on the fly.

Every picture needs width * height bits of RAM.

(Note: Mostly all jpeg-viewer needs width * height * 3...5 bytes for
decompressing and converting!)

For example: 1280 * 1024 = 1 310 720 pixel
1 310 720 / 8 = 163 840 bytes, 160 KB

4 * 160 KB + 192 KB = 832 KB

=> You can handle 4 (!) pics with 1 MB RAM.

If you wanna show larger pictures, just activate shrinking by 2, 4 or 8.

=> 16 000 * 12 000 / 8 / 8^2 = 375 000 bytes, window size is 2000x1500.
^
shrink factor

The program can be run in 4/16/256/... colors too, but display is still b/w.

Its almost as fast as mgif, with shrinking its up to 3 times faster!

(Shrinking by factor 8, picture STTNG166.JPG, 512x400 pixel, 43508 bytes.
Time from start to fully displayed picture: alvi: 2.83 sec.
alvi, no shrinking, same picture, 13.15 sec.
mgif 4.2, no shrinking, same picture, time from start to first displayed line:
10.21 sec., fully displayed: 22 sec.)
(Hardware: MEGA ST 4/HBS 640/T28+FPU)
(For 8 MHz ST: 7.49/39.16/27.72/61 seconds)

Current version of alvi is 0.04 (really pre-alpha)

Greetings,
Uwe.

You could try bypassing the moderation. Pretty simple to do. Left as
an exercise for the reader.

> I would like to add my support for either a new binaries group for
>the ATARI platform or making the existing one none moderated? if that
>is an option?

It is a Big-8 group, and if you can prove that the moderator is not
doing the job he signed up for, you can put forth a proposal to replace
him or to remove the moderation. (Note this will make it the second
comp.binaries.* newsgroup to not be moderated, alongside comp.binaries.-
apple2 which has never been moderated and still gets people posting
non-binaries to it.) Comp.society.folklore went through a vote to
remove moderation (it failed, but a new moderator did get appointed and
it now gets traffic). Take the cause to news.groups and put together a
complete proposal for submission to news.announce.newgroups.

I myself have no vested interest in the topic. I'm only suggesting a
course of action.

Followups directed to news.groups.

You need a hardware patch to get an ST running at 28K8. FZDT works fine here (even if it does report 19K2 my port is locked at 28K8).

ATB,
Karl.

He's probably busy as I still think he works for Microsoft full-time.

Anyway, its not up yet...v4.15g is up and works slightly faster than
4.15b but it has problems printing (I have a ZIP drive connected to my
PP)...

632. Hard Drive, TOS 1.02, oh gawd!

Newsgroup: comp.sys.atari.st
Date: 1996-07-13 00:00:00 UTC
From: gary@imco.demon.co.uk
Message-ID: <837344334_OASIS_@imco.demon.co.uk>
Source record: 141991

I've just treated my elderly but much respected 520STFM (upgraded to 4MB) to a brand new hard drive. The machine is TOS 1.02 the hard drive is driven by the GE-Soft driver. Everything is fine, except when the amount of free space on a partition has to be checked by the application running. The drive light blinks and blinks and blinks and eventually the free space is given. Am I right in believing that TOS is actually counting the free sectors one by one? What should I do about it? Will TOS 2.06 fix it? Would I be better off buying Migic, Geneva or some other TOS replacement? Is there anyway of fixing it for free? (I don't want to spend any money if I don't have to).

I would be happy to live with it but for CAB which seems to want to check freespace every time it downloads a document. I rekon 1.02 must be British Telecomms favorite TOS version :-)

Deep down I know I need to upgrade TOS, but to what? Multitasking would be nice but only if it works without crashing my system. Mint is not an option as it crashes Prodata (amounst over things).

Software I have to run:

Protext 6.5
Prodata
Oasis 1.35 (bless it)
CAB 1.3
Wordflair
Write_On
Spice 2G
Arabesque Pro
AT-Speed and everything that goes with it (Yes I do use a PC emulator it's a case of having to).

Any advice/opinions/help would be much appreciated.

thanks, Gaz.

BTW if anyone would like to know how to run Oasis and Cab without a harddrive I can help (I've become a sort of expert at it :-( ).

Ok a quick and easy answer would be, I presume then you friend has
internet access, so why not join the STOS mailing list, normally used
for just such questions and answer sessions :) although a bit quiet at
the moment because most of them are students and gone home for the
school hols :)
>--- SNIP ---
>
>I am looking for someone with STOS experience who can help me with
>sprite collision detection.

I do STOS :)

>In particular, I want to know how to detect whether two sprites have collided,
>and do something if they are touching. This is to allow the player's on screen
>person to "pick up" and object. The object would be represented by a sprite.

Sorry there is no straight and simple answer, Do I take it your
friend doesn't have a manual, not being funny here but its pretty
simple in there to do sprite detection, you could even use a colour
detection and check for irregular shaped objects,

But by far the best method is to use the Missing Link extension "MANY
OVERLAP" command, this will detect between hundreds of objects on
screen in lightning speed,

*** tip to any stossers, manyoverlap for multiple object detection is
far faster than the straight overlap that detects one object, its
because the new "many" commands use a different code ***

If you havent got that extension then the best advice would be to get
some copies of STOSSER diskzine, there are 26 issues (STOSSER 27 due
out soon) and each has a minimum of 40 articles, with over half STOS
related, the rest of the disk is filled with stos source, thats over
15 meg of stos source in the 26 issues,
Theres plenty on sprites and sprite detection, including my "idiots

guides to using bobs" etc, try floppyshop in scotland,

There is no way I could send you an example routine as I have no
idea what extensions you have or what you are really trying to
achieve, some of the aboive would hopefully help ????

Cheers.............!ynoT

As I explained and indeed you have quoted, the latest STOSFIX and the GENERIC fixer actually do the same job, the big difference is that the programmer uses the generic fixer and the user simply runs the program, the stosfix is for the user to use, if he has a program that hasent been fixed already,

>
>If the first is the case...: please check properly next time... it
>saves a lot of hassle (also makes people wonder in the future...)
>
You should be directing that straight to STF and whoever does the cover disk ? I doubt very much you will find them in here :)

>If the later is the case...: please tell use which fixer we need ! :)

Well again, if you are talking about this specific game then I doubt any fixer will do,

This is the missconception, NO fixer is available to fix every STOS program, only certain STOS programs can be fixed, I dont think STF realise this and therefore naturally assume that every STOS program will work on any TOS version if fixed...they wont?,

As a current STOS programmer, I have to say that not a lot of care is taken to make a game/program tos206 compatable, out of the thousands of users out ther, how many have tos206?, out of those that do have it, most have switchable tos 206? and even then, the vast majoroty of tos206 owners are serious users (thats why they got it) and usualy

hate games,
we are left with very very few game playing none switchable tos 206 users, certainly too few to warrant making an inferior game simply to make it run on maybe a couple of dozen machines?, sorry if that sounds brutal, but I would rather use every command possible and make the best game possible and know it works on 15-20,000 computers?

As for FALCON owners, well ?? did they really go to all that expense so they could play 16colour chip music games, I think not?

To put it plain and simple, I would do my best to make my software work on as many tos versions as possible, but not at the expense of the actual program,
Generic fixer is the same as STOSFIX but only needs to be used one, by the programmer,
No fixer is capable of fixing EVERY STOS made program,

There is a STOS FAQ available for anyone to download or read from my web page,

In the latest issue of MAGGIE (issue 20 out now!) there is an article by myself that was originally commisioned by ATARI WORLD magazine, this introduces and explains STOS as it is now in 1996 and how far it has been upgraded, well worth a read :)

Cheers.............!ynoT

```
Oasis Report - D.M.Brewood - Updated: 12/07/96 # 041 (posted to
====================================================== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Rod Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)
Boris D. Cahan (bdc2@po.cwru.edu)
Danny Bhabuta (dbhabuta@cix.compulink.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x
768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE
message echo on a weekly basis.

This data is based on the alpha version(s) provided on:

ICE = 09 July. 1.03
OASIS2 = 09 July. 2.06 (same issue as the package).
ICE_NET = 09 July. 1.23

Package 2.01 was the first stable release version.

Package 2.05 released 03/06/96.

Package 2.06 is under alpha test by myself now.

New in ICE since the last beta OASIS2 release:
==============================================

1.03

- TCP checksum error problems fixed 100%
- News History file update for numerical format.
- All IP routines now in machine code.
- FTP now supports use of anon as well as ftp as a username.
- When an 'IP: Bad checksum' error message is displayed the ERROR_PING
flag is not picked up and no ping is generated - fixed.
- ICE Usenet Window does not always display contents - fixed.
- Clock adjustment code implemented in ICE.
- Mail index system implemented.
```

New in OASIS2 since the last beta OASIS2 release:
==========

2.06

- Font size controls added to Oasis.
- Complete MIME send routines (Partials created Automatically) with
iconic control panel. [Email to be completed].
- GMT offset system recoded - now does not reset system clock.
- Send MIME bugs fixed when using external editor.
- Not enough disk space when unbatching news no longer results in the
incoming mail being deleted.
- MIME partial size selectable.
- 'Mail To:' support added for MIME. **
- OutMail now shows outgoing MIME files correctly. Will be added to the
Internet Window. **
- In the Outbound window - Window header should changed to show 'outbound'.
- Time / Datestamping of files.
- MIME partials marked as expired once processed into a single MIME.
- 'A' flag now indicates in the mail window that an automatic Oasis
function has occured.
- Local time shown in the newsgroup details dialog, but GMT still written
to the groups file.

** = In progress and will be completed before the next package release.

New in ICE_NET since the last beta OASIS2 release:
==========

1.23

- Mydials removed and in house code generated.
- Windows style pop-up's added.
- Frond Support added.
- Font size controls added to Oasis.

New in Spider since the first official OASIS2 release:
==========

- Basic code evolving.
- Code written to display raw text without HTML tags.

List of possible bugs discovered in ICE so far:
==========

- Fix PPP packet bug where carrier drops.
- On his TT Neil suffers from:
- Incoming news keeps stalling with bad packet (IP) errors (PPP).
- Always IP checksum error on 'loging' (note: SB 'logging) in.
- Several times had error 65 when exiting ICE to Oasis, then crash!
- IP: bad checksum after starting a SLIP connection or bad packets
when a PPP connection is started.

List of possible bugs discovered in OASIS2:
==========

- The 'Local Post' bug is back under MagiC 4 whereby Oasis crashes out
when posting the message locally.
- Oasis2.prg doesn't work properly with Outside on some Falcons. It
seems to allocate all virtual memory with loads of disk thrashing and
does run but takes several minutes to load. ICE.PRG works fine.
- Daily Net window does not resize to accomodate the size of the
newsgroup names.
- When using ALT S to post a MIME email the pop-up defaults to 'reply-to'
even when no message is selected.
- When adding a group of new newsgroups the first group is sometimes not
added into the groups file, or is added with a garbaged description.
- Two bugs from: Stephen Mulrine <robotron@moroder.demon.co.uk>:
- If an outgoing mail message has a line beginning with a dot, the dot
will vanish in transit.
- If an incoming mail message has a line beginning with a dot, an extra
dot will appear (I assume).
- Stray .'s still to be found in the NEWGROUPS file.
- QED can not be used as an external editor.

F.R.O.ST Development:
=====================

Done:

- Coded front end so it is MagiC / Falcon compatible.
- Added GEM window code.
- Added ICE interfaxce code.
- Recoded the email processing code.
- New database format eveolved and working.
- NeST address's now have the format of Daron.Brewood@nest.demon.co.uk
- NeST email will now export to the internet.
- MAIL.IN file scanned to locate mail from the internet for NeST users.

To-Do:

- Import mail from the internet into NeST.
- Add 'FROST' user system into OASIS.
- Export NeST echo's to the internet.
- Import internet newsgroups in to NeST echo's.
- Add support for sending archived NeST mail packets out to an internet
address in UUE / Base 64 format.
- Add support for receiving a tagged internet UUE email and processing it
out into an archived mail packet for NeST to process.

The following other files are maintained by myself for the OASIS2 / ICE
system:

FAQ.TXT - Frequently Asked Questions.
GOSSIP.TXT - Latest News and Gossip.
NEW_ICE.TXT - ICE Net Development History.
NEW_IC2.TXT - ICE Development History
NEW_OASI.TXT - OASIS2 Development History.
TO_DO.TXT - To-Do List for OASIS2 / ICE.

WANTED.TXT - Things needed for OASIS2 / ICE devleopment.

Phil Yeadon and Dave Levi have my full permission to use this listing as a master listing, and to thereby generate history files for Oasis/Ice release archives. This entire listing however as always remains the property of myself.

Daron Brewood - dbrewood@cix.compulink.co.uk

645. OASIS2 & ICE FAQ

Newsgroup: comp.sys.atari.st
Date: 1996-07-13 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <61662732_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 142004

```
Qasis / Ice FAQ's
=================

- Q: Can icons be added to those already used (as seen within the
toolbox)?
A: Yes - the TOOLS_LO.RSC and TOOLS_HI.RSC files may be edited to add
additional icons.

- Q: Can the subject be changed when replying to messages?
A: No, this is not allowed according to the RFC's.

- Q: What causes error OASIS FILE ERROR I:\OASIS2\NEWS\ARTICLES, and how
can it be corrected?
A: Try re-indexing the news group, sometimes the index gets corrupted
by drive fragmentation from a lot of unbatching and expiring. If
this fails, Wipe the group.

- Q: What do OASIS and ICE stand for?
A: OASIS = One Atari System Internet Software.
ICE = Internet Connection Extension.

- Q: How much is the registration fee for Oasis2 and ICE?
A: The registration fee is £30 pounds and gives a lifetimes
registration for OASISx, ICE, ICE_NET, and SPIDER.

- Q: If the email files get corrupted, how can this be fixed?
A: Delete the relevant .MIX file from the mail directory and when post
is selected the email will be reindexed.

- Q: I know that 'X-' reference lines may be added to the top of a
message manually to access things like Anon servers, but how can
these be added if for multi-part binary file transfers? Is it
possible?
A:

- Q: Why does my USR Sporster Vi not respond to the dialer?
A: For some reason the Sportster switches to numeric result codes when
accessed by ICE. Use ATZATV1 as your init string and it will solve
the problem.

- Q: Can dialogs be added in to OASIS2/ICE to support setting of the
following to allow fine tuning? [Dave]

attach asy AUX: 0 ppp sl0 32767 1500 110
ip ttl 64
tcp mss 1460
tcp window 11680
```

tcp irtt 3000
tcp syndata on
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000

- A: PPP is an unusual system in that during configuration you define to
the remote site how you want the packets to be sent. Whilst this
negotiation is being carried out there is a simultaneous negotiation
of what form & size the packets required by the service provider are
to be. This generates a protocol in which what one side can send it
cannot decode.

attach asy AUX: 0 ppp sl0 32767 1500 110
This is an internal setting for NOS and is irrelevant to ICE.
ip ttl 64
Time to live is suppoorted in internal & external packet life.
The internal packet life is for packets which are sent to
addresses which have the same two numbers at the start of the
address as the user. External packet life is for all other
packets. The values for these are settable inside ICE-NET.

tcp mss 1460
The maximum segment size is equivalent to the packet size set
in ICE_NET. Any size between 512 and 1948 are supported by ICE.
the default values in ICE-NET are for ease set to 512, 1024 &
1536.
tcp window 11680
ICE supports a window of unacknowledged packets of upto 4
times the packet size.
tcp irtt 3000
tcp syndata on
Currently ICE works to the RFC definition of TCP/IP these
values must be covered in ICE if necessary to a working
system. My understanding of the NOS configuration lines does
not cover these two.
ppp sl0 lcp local mru 1500
ICE defaults to a local MRU of 1524 bytes although the
incorporation of the PPP packets size in ICE-NET will be
complete prior to release of 1.03.
ppp sl0 lcp remote mru 1500
The remote MRU size is negotiated with the service provider
during configuration of PPP. ICE supports any value that the
provider requests. The size defaults to 1500 if not
negotiated.
ppp sl0 lcp local accm 0x000a0000
The ACCM is the list of escaped characters required by the
system below character 32. ICE does not require any character
to be escaped and therefore requires no ACCM. If the remote
site (Service provider) requires an ACCM this is supported
by ICE on request by the service provider during negotiation.

ST Type.TOS gives a very basic readout of system info. Profile.PRG
(shareware by Mark S. Baines(?)) tells you everything you'd ever want to
know about what systems are inside your ST.

648. UK: For Sale.

Newsgroup: comp.sys.atari.st
Date: 1996-07-14 00:00:00 UTC
From: Spencer@mettav.demon.co.uk
Message-ID: <16202_Spencer@mettav.demon.co.uk>
Source record: 141858

The following items are for sale:

VideoMaster digitiser and colour splitter for the Falcon. 60 UKP

Clarity Falcon, direct to disk sampling package with DSP clock
cartridge. 60UKP

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine. 70 UKP

Calligrapher Gold. WYSIWYG wordprocessor. 25 UKP.

STWorld magazines, issues 24 - 26, 29 - 32 and 34 - 53.

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.) 8 UKP

Timeworks 2 plus two manuals on Desktop Publishing with it. 20 UKP
(inc. P+P).

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.
20 UKP.

Hires/Colour monitor switch for ST's. Plug in and use both a Hires
monitor (SM124, etc) and a colour monitor with just the throw of a
switch. Postage and packing only.

Star LC10 Dot Matrix printer. Nothing, but buyer collects!

E-Mail me with any offers for items you may want.

Spencer

>But I can't remember what it was called and can't find it anywhere.

>Does anyone know about this, or any other speech recognition program
>for Falcon? Maybe some improvements have been made to the one I saw?

Yes, I remember the program you mean - its called VOX (not to be
confused with VOXMAIL the voice mail program) and was writen for
ST Magazin, the French magazine..

Due to a disk corruption, I dont have my copy anymore... I dont
remember seeing it on many FTP sites, but you could try ftp.cnam.fr...

>Thanks for help,

Shame I dont know where to get it... If someone spent some time
debugging it (C source was included, IIRC) then it could have been
quite good...

> difficult to believe!

Iomega got the jump on Syquest with the ZIP drive. The EZ135 was
a bit late getting to market. Syquest has introduced the EZ Flyer 230
Meg drive using compatible media with the EZ135. That is, the EZ Flyer
can read/write/format the 135 Meg disks. The EZ135 is being phased out
and replaced in Syquests product line by the EZ Flyer 230. This doesn't
mean that the EZ135 is not a good buy at $120 or that you shouldn't buy
one. It's just the facts behind the recent price reduction.

I'm using v6.60 on a tt (before that an ste) without any problems.
Arnor went bust last year and were bought out by Compo, who then went
bust.

I don't know if anyone is selling the program or the upgrades anymore.

Best wishes

Neil

I used a couple of different serial patch programs when I had TOS 2.05.
Serial Fix and a serial patch program from Atari if I'm not mistaken. Both
of them worked with Straight FAX. I could not get Hsmodem to work with
ST Fax.

ECP is "Excessive cross posting", also known as spam. This is when you
dump as many newsgroups as your news server into the Newsgroup: line and
send out a message.

EMP is "Excessive multi posting", also known as spam. This is when you
find all the newsgroups you can and send out a separate copy of your post
to each one.

Both are Bad Things.

-Kyle R. Hofmann

CAB 1.3 in WWW131 has an option to set a viewer for HTM files. That's usually what you want.

> However the current release of CAB seems to want to view the
> source itself.

That applies to HTML files which do not have the HTM extension in the cache. (Don't know why.) But in that case the number in the cache is shown, e.g. 0000005D.

> With the current release it seems that your best bet is messing
> around in the Cache folder... and try and find the correct .HTML file,

No, see above.

>> Is there a program that I could run over the .htm file to strip out
>> the html commands but leave the actual content in a readable form?
>
> Never seen one.... have you tried search and replace in a WP ???

ST's are much better at reading PC formatted 720k discs than the other
way round - So always format on the PC.

: > longer a very active platform, and access to FTP and WWW have improved
: > to the point that they make a much better primary distribution
: > channel.

The difference between c.b.a.s and a.b.a is that c.b.a.s was an ST only
newsgroup. ST only means that all other Atari submissions must be
rejected by the moderator. a.b.a is (will be) a generic Atari software
group --- if someone has a piece of Atari software from any pltform that
they'd like to post (that's not WaReZ), they can post it in a.b.a and be
within the confines[1] of the charter.

-Kyle R. Hofmann

[1] Confines? Ha! More like a one inch high wall made of styrofoam,
judging from some of the discussions I see (and participate in :)
everyday.[2]

[2] This does not mean that WaReZ will be OK in this group, just that
charters generally look silly in comparison to the actual postings that
occur on a group.

662. Help! STE Sound processing software needed!!

Newsgroup: comp.sys.atari.st
Date: 1996-07-14 00:00:00 UTC
From: clifton@southern.co.nz
Message-ID: <4s9i4d$8mo@orm.southern.co.nz>
Source record: 141930

Hi there peoples

I need some software for my STE which will allow me to process my sound samples..... I don't mind if it isn't realtime :) but I need to be able to do user definable flanging, reverb, echo, distortion, chorus, etc and also the usual tools like insert, overlay, etc.... Tone generation would be nice too.

Thanks

CAUC (Coventry Atari User Club)

Just a reminder about the time and date of the very first meeting
of the Coventry Atari User Club. So if you are looking for a local
club supporting your machine, why not drop in?.

When: Saturday 20th July 1996.

Where: The Old Clarence pub.
(on the corner of Hearsall Common, on Earlsdon Ave North, opposite
the entrance to Broomfield Rd) in Coventry.

12 o'clock mid-day onwards in the bar area.

[I'll be the guy in the Star Trek T-Shirt ;-))]

As you will no doubt have guessed, this first meeting will be more
of an informal get-together than a meeting. It's hoped than plenty
of you will come along and show your support.

For more information, give me a call on (01203) 715921,
netmail or Email me...

```

Using ice_net.prg set the 'general log' option to 'viewer'

Without HSmodem7 it fills the screen. If you prefer to save it all to
file and read later then you can set the 'general log' option to
'file'

Best wishes

Hello Anthony;
Well why not just use Oasis135 if you are going to use ppp only . It's
a lot faster then Mintnet and a lot easier to use for Mail , Ftp

etc... As for the web part you can use linx in mintnet and then view
your picks off-line .

Not the Jaz Drive but I do have an Iomega Zip drive up and running well. It really is the answer for cost effective back ups and for expanding ones hard drive capacity. It took a while to source a suitable SCSI II connector block to fit the Falcon but once that was purchased I was up and away. I did have a problem with a couple of suspect disks but they were changed and all was OK.
By the way my driver is HDDriver v4.5

There are two solutions . The best is a TOS upgrade to 1.04 or 2.06. Or
you can speed up disk access (reading the FAT) by partitioning your hard drive
into smaller partitions.

I've used it at 57600 bps on serial 2 which is as fast as my
modem will handle. It seemed to work fine with Connect, but the speed
improvements were very marginal, perhaps 5 char/sec. HSMODEM6 is the only
serial patch that I'm using.

682. Is ATARI-WORKS too buggy for you?

I'm looking for some opinions out there. It seems to be a
wonderful idea (only "idea") to have a Database, wordProc and SpreadSheet
together but (I'm using 1.2) it crashes frecuently; alone or with many
ACC's and PRG's in memory. For ex: I tried changing font size while using
the spreadsheet and closing an opened one... the bee appeared-> hang up.
I tried to open a WordProc which seems to run quite nicely but it is kind
of hard to figure out how to handle it.
I installed the original package twice. Anybody satisfied with
Atari-Works over there? Is it any other integrated package or faaaarrrrr
better improved version? I have 4 megs/ Falcon 030, HDD. Thanks!!

Please repply (if possible) to fpinto@byu.edu

Hi there!

I've just got myself a .net connection for the summer, so that I can continue to read mail / news and FTP while I'm away from university (I can live without the web, as this is the most expensive part, IMO).

My IP says that they only provide PPP (although when connecting using there PC software it says 'establishing SLIP/PPP connection') and so I cannot go for Stik... (unless there have been any changes in the last month or so...)

As I already have MiNT set up on my Falcon (although not perfect - 'make' doesn't find anything without explicit paths) complete with a Minix partition, I guess MiNT-net is the software that I should use...

I have MiNT-net 0.80 (not installed), but I believe there is now 0.90.

Is there a big difference? What else will I need? pppd seems to be mentioned as essential in the docs, but where can I get this without downloading the large MINTOS distribution, which I dont really need.

Also, I think my provider said something about PAP (Password Authentication Protocol). I found no reference to this in the docs to mint-net... is this significant?

All advice welcomed!

FYI my provider is UK Online (no relation to AOL)...

Please email any replies to me, as I'm not sure how often I'm going to read news (now that I have to pay phone bills... :)

Cheers

Anthony

Err, sort of. CAB does, but it depends on the overlay to support it.

I _think_ that the STiK overlay does. My MiNTnet overlay _doesn't_ yet.
(I've been horrible and busy and just not done it yet)

080 is about the latest reliable version. There's an 090, but I've had
troubles with it on long connections (I have a permanent internet link).
I've found it freezing up after an hour or two, and dropped back to 080.

>Yes, that's certainly true. There are not many pure viewers nowadays.

Now you know one, alvi :)

>You're using the IJG libraries as well then, I suppose?
>What version?

Release 5 of 24-Sep-94.
>
>>It shows jpeg-files in b/w, with dithering and shrinking on the fly.
>
>You don't have any plans on going greyscale?

Perhaps for version 0.06. Main idea of alvi is showing large JPGs in
monochrome resolutions using GEM windows.

>>Every picture needs width * height bits of RAM.
>>
>>(Note: Mostly all jpeg-viewer needs width * height * 3...5 bytes for
>> decompressing and converting!)
>
>MGIF only needs w * h bytes (plus the file size and some overhead) when
>you load in greyscale mode.

...and that's 8 times more than needed for dithered monochrome.
How would you display a 1200x1600 jpeg (1MB RAM)?

>>If you wanna show larger pictures, just activate shrinking by 2, 4 or 8.
>...
>>Its almost as fast as mgif, with shrinking its up to 3 times faster!
>
>This shrinking is built into the IJG libraries nowadays, isn't it?

Correct.

>>(Shrinking by factor 8, picture STTNG166.JPG, 512x400 pixel, 43508 bytes.
>>Time from start to fully displayed picture: alvi: 2.83 sec.
>>alvi, no shrinking, same picture, 13.15 sec.
>>mgif 4.2, no shrinking, same picture, time from start to first displayed line:
>>10.21 sec., fully displayed: 22 sec.)
>
>Hmm, that sounds very slow for the full display. Was v4.2 really that bad?

Yep, the calculations for the flicker mode was that slow.
BTW, the mgif flicker mode is the best "greyscale" viewer for ST High.

>Anyway, the display should be a lot faster with v5.

Correct, but the v5 does more than is needed for me.
I just drop the *.JPG on MGIF 4.2 or alvi, have a look, and exit the viewer.
With alvi, you can view more than one JPG at the same time, unless you run
out of memory.

>What compiler are you using, by the way?

Pure C 1.1

>I don't see why you shouldn't get at least the same speed as MGIF on
>JPEG unpacking. The newer library versions are supposed to be faster than
>the one I use.

Remember, shrinking and _dithering_ on the fly. No optimizing up to now.
It's C-Code written in less than 2 days.

Greetings,
Uwe.

Hi Tony, on 10 Jul 96 you wrote:

s> Organization: STOSSER Software
s>
s> I for one Totally and utterly AGREE, plenty of peeps in this newsgroup
s> ask for small patch programs, or maybe an odd font, or a picture or
s> whatever, then theres new releases or beta test stuff.
s> YES its pretty pointless as it stands right now, lets have the same as
s> everyone else, an easy to access binaries fingy :)

The argument against this was that FTP access is readily available. However,
for the smaller stuff, I'd agree with the idea. The problem might be that
people would also need to be able to do selective downloads just in case of
large unwanted files. Personally, I don't want my hard drive to become
another file depository (it's bad enough as it is), so I won't be joinin

btw Tony, I grabbed a look at your web site online before I got around to
UUDecoding the copy you sent me. Not bad! <g>

693. MagiC 4 problems...

Newsgroup: comp.sys.atari.st
Date: 1996-07-15 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <4scp66$4ae@orm.southern.co.nz>
Source record: 141812

Hi there...

A friend is having trouble with MagiC 4 and its Font option (from View menu on MAGXDESK). When he tries to use this option, MagiC crashes with an 'OUT OF SYSTEM MEMORY - SYSTEM HALTED' message. His setup is a Falcon030 4meg with MagiC 4.02/NVDI 3.01. We have tried using FOLDRxxx.PRG to give more system memory but that still doesn't work. Is MagiC 4 not fully compatible with NVDI 3.01?

We also tried to run STiK v1.08/CAB v1.3 with HS-modem6 under MagiC. The send light on the modem went crazy and the ISP we were connected to dropped us, obviously concerned about the stuff that was being sent to it from STiK :(. Without HS-modem we cannot connect at greater than 19200 baud, yet the modem is a 14k4 that seems to run _very_ nicely at 57600 using Hs-modem6 under Single TOS 4.04...

If anyone has any clues as to how to remedy the above problems, please email me...I will be your friend for life :)

Chris W.

With the LINK96 any driver will do because the LINK96 itself supplies
the
SCSI ID for the ST. This is what the Quantum Fireball drives expect in
order
to be visible on the bus.
With the TT and Falcon you don't need a host adapter. In this case you
need one of the drivers mentioned above. TT and Falcon allow initiator
identification/bus arbitration without additional hardware. The only
thing
needed on these machines as an appropriate driver.

> still responds 'No Drives Found' when Partition is selected. Please help.

Some WD drives require a special initialization and thus must be booted
with a special boot floppy inserted. HDDRIVER supports creating such a
boot floppy but this feature is only available with HDDRIVER 5.0 or
newer. (You can try if it
works with the demo version of HDDRIVER 5.2, available from
acp5.chemie.uni-kl.de/pub/atari.)
BTW, if HDDRIVER simply reports "No partitions found" this only means
that
there are no partitions on the drive. If the drive has not been
partitioned yet this is normal. In this case simply start HDDRUTIL and
enter the partitioning dialog. If a drive is not partitioned you won't
have to care about the message HDDRIVER displays.

I mistyped it - since the group no longer exists, I had no ready reference,
sorry about that.

<deletia>

The group has been rmgrouped; if you show it as active, then you missed the
removal message. I wish everyone had.

Yes. Commercial advertising of any kind is inappropriate outside of the
business groups (with some minor exceptions - the .announce group would
be the right place for "reduced price" announcements that specifically
pertain to that type of system, I think).

>
>No shit sherlock. But Windows NT runs on PPC. Thats upto MS when the WINDOWS
>REACHES PPC. Solaris will.

This might be germane if not for the fact that the original poster was complaining
that the promises of universal CISC emulation by the new RISC PPC was never
realized. NT never should have needed a port. That it did contradicts the early
promises of the PPC.

Software can be ported anywhere given enough effort. This is nothing to
brag about.

Solaris is unix; unix is everywhere. This has been so for quite some time.

That was not the point. Atari lead the way in cross platform emulation long
before Apple got it in it's head to do so. Apple bragging in this respect is much like
Microsloth bragging about Win95.

Well, someone get a proposal together and send it in to
news.announce.newgroups, or track down the existing moderator and ask
him to resign his position and appoint a new moderator (or moderators)
that will do the job.

When your car gets a flat tire, you don't buy a new car. You get a new
tire, and a new spare tire too.

708. ** Problems with Antmail and Falcon **

Newsgroup: comp.sys.atari.st
Date: 1996-07-15 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <4sdm17$meq@jake.esu.edu>
Source record: 141827

I just bought a Falcon 030 (thanks again Gustavo) and recently
ported over STiK to it. Unfortunately, Ant Mail isn't making the
journey. It seems that on this machine, when I try to download a message
it gets within 20 bytes to the end and then stops. The modem sits there
dead while the program is waiting for those last 20 bytes. Hitting
escape or undo does nothing. I find that if I wait a few minutes it
receives a few more bytes (more than the letter, by about 20)but it still
hangs. I read the message and the words 'Error from POP server,
disconnecting from ns1 (my name server)' appear at the end. It sounds
like a server problem at first, but it didn't start until I got the
Falcon. My 1040 Ste worked just fine, which leads me to believe there
might be more.
If anybody has any clue what the poblem is, I'd be very grateful. I
thought I'd post here before I bother the authors (they probably get many
messages a day) and also insure I"m not doing something wrong.

Thank you in advance,
George Garner

To solve this problem turn off preemptive multi-tasking, it will then
work perfectly.

first see if a 3.5" floppy cleaner will take care of it (and if you're afraid to take the machine apart). I took my drive apart the other day when it was having a hard time formatting disk and found a flat dust bunny in there... once I took it out everything was dandy!

Source record: 141837

With simm prices as low as they are now, Im looking to upgrade my 4 meg falcon to 16 meg. I am looking for information on the various methods of doing this.
I know atari has a plug in module and there a a few 3rd party boards that use simms. I figure atari's board is probably the most costly way of doing this. Also, do any of these require soldering and/or removing of the rf shield. And what pin size simm module and max speed do the 3rd party boards accept.
Thanks in advance for your help.

Tim

719. Re: Replacement/removal of comp.binaries.atari.st moderator?

Newsgroup: comp.sys.atari.st
Date: 1996-07-15 00:00:00 UTC
From: Chris_F_Chiesa@cup.portal.com
Message-ID: <152723@cup.portal.com>

Oops, Hell, and Damn. I'm having a very difficult time participating in this thread, due to the large number of newsgroups and Portal's lousy (mis-)handling of that situation. Please forgive the possibly empty message I may have just posted to four groups! Sigh...

Anyway...

Kyle R. Hofmann <rhofmann@crl.com> writes:

>[1] Confines? Ha! More like a one inch high wall made of styrofoam,
> judging from some of the discussions I see (and participate in :)
> everyday.[2]
>
>[2] This does not mean that WaReZ will be OK in this group, just that
> charters generally look silly in comparison to the actual postings that
> occur on a group.

How sad. It used to be, before the Internet became the playground of any loon with a few hundred bucks to blow at Computer City, that the newsgroups were largely self-policing and self-regulating and DID largely follow their charters. That doesn't seem to be the case today, as noted in [1] and [2] above.

For one thing, the charters and general policies are all but completely INVISIBLE, until and unless an alt.config (what IS that group for, anyway) or similar thread talking ABOUT a group, "spills over" INTO the group being discussed! Heck, I just now fell into this discussion "by accident" myself, having caught it in c.s.a.8 and having never before posted to any of the other three groups this post is going into (to say nothing of the N groups I can't post to due to those aforementioned Portal shortcomings). Just where, and how, and when, is the average Internetter supposed to encounter any form of documentation, instruction, suggestion, or signage, telling him anything more than a newsgroup's NAME already does? I've never seen anything, in over eight years on three or four ISPs. I say, make this information more visible in the first place.

If that doesn't work, then we have a good argument for making ALL newsgroups moderated. That's a hell of a shift, and would require a hell of an investment of someone's time, and would undoubtedly slow down and screw up the usefulness of the Net at large, but it WOULD eliminate the problem of off-topic posts pretty much ENTIRELY. If it could be shown that the advantages of a fully-moderated Usenet News organization outweighed the disadvantages, I might even support the idea myself -- and I'm a longtime and outspoken opponent of all authority and government beyond the most minimal self-regulation. (If everyone were more like ME, the problem not only would go away,

but would never have come up in the FIRST place. ;-) It's a darned shame that, left to themselves, most people seem to behave as though they're lazy, ignorant, or BOTH, prompting some OTHER people to feel the "need" to "govern" the rest.)

> causing all my problems in this instance...

In this instance, Portal is correct; I'm sorry, I must have unconciously added
the ".st" in the middle of that.

> I for one have been right here on comp.sys.atari.8bit on and off for nearly
> ten years, and have only occasionally seen reference to a "warez" newsgroup,

> "alt" or "binaries" group(s). I barely even know what groups EXIST.

I can email you a complet newsgroups list, if you need it. It's rather bulky
at about 350k, but if Portal won't tell you waht exists, I will. IMHO, any
and all "warez" groups that exist are pirate groups, and I won't subscribe to
them, even if I can find them (there are several listed in my NG file).

Not only that, but an unmoderated group doesn't depend on the whims of one
person to give it content.

> > comp.binaries.atari.st should be removed. Despite the continued
> > presence of a capable moderator, its submissions declined to the point
> > where virtually nothing was valid for the group.
>
> This is probably a relatively valid reason for removing a group.

This would be a valid reason /IF it were true/, but it is not. Submissions
wer made - and ignored. I submitted several files in the omnths prior to the
group's demise, and I have seen others state the same thing; no response was
ever forthcoming from Annius. I don't know if that means he did not get the
files, or simply chose to ignore them.

> > The Atari ST is no longer a very active platform,
>
> This most certainly is NOT a reason for removing a group, and it disturbs

> used to "support" the suggestion/recommendation/decision to remove a group.

It's tantamount to saying that "the 286 is not a much used chip any more, so we will no longer write software that does NOT use 386 opcodes." Granted, there is a lot of software that won't work without those opcodes - but probably 90% of the current DOS-based software, including most network drivers for Novell networks, work just fine on 286 boxes. I doubt that the owners of those networks using 286 servers and clients would be very favorably impressed by anyone who told them that they would be required to give up their existing hardware platforms.

> my numerous rants on THIS subject in groups like comp.os.vms and one or
> another (I forget which) of the Windows NT groups...

It's also the way things are done, and frankly, it blows. Getting an alt. group for Atari binaries effectively removes the controls exercised by the "Big 8" cabal (and such a cabal obviously exists, else it would not be necessary to put a new group proposal to a "vote").

> > Annius V. Groenink <avg@cwi.nl> posted messages to the group asking

The fact that the question was posted in comp.sys.atari.st is true. The allegation that "the vast majority agreed" to rmgroup it is either a mistake,

or an outright lie. Since I don't know if the person making the statement
knows the truth or not, I will assume it's a mistake.

There is no longer such a group, Greg. It was removed some months ago
(March? April? May?) at the request of the moderator, and over the
objections of the users (the few of us who knew that the group existed).

We're not replacing a flat tire, we're replacing a stolen car.

I'm looking for a used C-Lab Unitor SMPTE box to be used with my Notator software for Atari ST. It could be the original Unitor or the later revised version, since I believe either will work. Please Email to drichard@execpc.com.

Thanks,

Dean

A lot. The most important ones from my point of view are WINDOWS95
compatible long filenames and support for DOS compatible partitions even
if they have a capacity of more than 32 MByte.
There were also changes concerning MAGXDESK but I didn't care for them
because I use THING as desktop.

Maybe the jumper settings are wrong on this drive? Or it requires
initiator
identification like the Quantum Fireball drives. If this is the case you
won't be able to access this drive unles you have a LINK96 host adapter.
I suggest you also try other drivers like CBHD or HDDRIVER. CBHD or the
demo
version of HDDRIVER can be found on some ftp servers.
(acp5.chemie.uni-kl.de/pub/atari for the demo version of HDDRIVER.)

...
>Do you remember the subject? (JPEG viewing software needed)

Of course I do, that's what the rest of my message was about.
The four lines above only got there to contrast the JPEG/GIF file sizes.
Not really necessary perhaps, but that accounts for most things written
on Usenet. ;-)

>>You don't have any plans on going greyscale?
>
>Perhaps for version 0.06. Main idea of alvi is showing large JPGs in

If you're going to release this as FreeWare and don't want to write
everything yourself, just let me know.

>>MGIF only needs w * h bytes (plus the file size and some overhead) when
...
>...and that's 8 times more than needed for dithered monochrome.

I never said otherwise.
I'm all for a viewing only program, as long as I don't have to write it.

>How would you display a 1200x1600 jpeg (1MB RAM)?

You'd could use a hard disk to emulate virtual memory on an ST, but I don't
know about any program that does this.
On a Falcon you could use real VM (I sometimes manipulate images larger
than RAM), but that might be a bit tight with 1Mbyte physical RAM.

Not that any of the above is any where near a good idea if you only want
to look at a picture. ;-)

>>Hmm, that sounds very slow for the full display. Was v4.2 really that bad?
>
>Yep, the calculations for the flicker mode was that slow.

They're quite a bit faster in v5 and there you have the possibility to do
non-flickering mono F-S dithering as well, which is of course even faster.

>BTW, the mgif flicker mode is the best "greyscale" viewer for ST High.

:-)
I've actually never seen how the mono capable versions of Speed of Light
fares, but then I'm not often using mono mode these days.

>>Anyway, the display should be a lot faster with v5.
>
>Correct, but the v5 does more than is needed for me.

Yes, there's almost certainly a need for pure viewers.

>>What compiler are you using, by the way?
>
>Pure C 1.1

If possible, I'd suggest trying GCC. On some code it's a _lot_ better.
In MGIF I've measured a speed difference of up to five times!

The address to get a keyboard Gizmo is.

Chro Magic Software
516 North Jackson
Joplin, MO 64801 USA

(417)623-7393

I have been using one for about 6 months now. I am not sure on the
shipping status as of yet. It works flawlessly on a Falcon... but not
so well with a std ST.

I am a tester and am using it on an STF and STE. I have had problems
with it handling the system clock. If you want any other info contact
me via Email.

James

IFAIK Protext is no longer sold or supported by anyone since Arnor went bellie
up some time ago. The lastest version released was 6.6 (I have 6.5). My brother
in law knows the guys that wrote it (they live next door) and (again AFAIK) it
is fully Falcon compatable.

Try looking for a used copy for sale somewhere, it's some mother of a wordpro.

Gaz.

> > moderator and the readership, it is now removed.

(1) I voted to retain the group.

(2) The "vast majority" did not agree to anything. Perhaps a dozen people were even aware of the existence of the group, and I saw exactly one person (other than Annius) stating in a comp.sys.atari.* group that they agreed the group should be removed.

(3) It is my belief that Annius simply didn't want to expend the effort to moderate the group any more. Note that this is my personal belief, with no evidence to support it. However, read on...

(4) I submitted several binaries for distribution during the last month of the group's existence. They never appeared in the group, nor was their receipt by Annius ever acknowledged.

I believe that there are large numbers of Atari users who have no or very limited ftp access, who would use an unmoderated binaries group. I know for a fact that

the largest ftp sites for Atari files are very slow to post new binaries to areas where they can be obtained (I have personally uploaded 2 binaries to several sites; both have been obsoleted already, and they aren't available to the public yet).

Yes, well, thanks but it doesn't seem to have worked. I'll ask here - does
anyone have direct root@domain access to send the necessary control messages
to try again to create these groups? I can email the necessary header(s) and
text if you aren't sure how it's done.

I can relate. My personal opinion is that Portal has the worst service
of any of the "default" providers signed up with Netscape Personal Edition.

> For one thing, the charters and general policies are all but completely
> INVISIBLE, until and unless an alt.config (what IS that group for, anyway)

That won't happen with alt.binaries.atari becasue I have a messagebot to
post the charter every 2 weeks, even if nothing else ever gets posted.

> that, left to themselves, most people seem to behave as though they're lazy,
> ignorant, or BOTH, prompting some OTHER people to feel the "need" to "govern"
> the rest.)

The problem began in the Sixties, when it first became necessary for both parents
to work outside the home in order to support the accepted lifestyle of the
entire family. In the scramble, someone forgot the teach the kids basic courtesy.

However, I oppose moderated newsgroups in general, and indeed, have " *.moderated*"
in my kill list, now that the one atari binaries group is gone. If I wanted
someone else to form my opinions for me, I'd be a Republican, not an indepedent.
(That ought to garner some major flames! <G>)

TOS 1.2 is fine for floppies but with HD use the 40 folder bug will
eventually get you someday and is a real pain to fix even if you are
handy with a disk sector editor, impossible if you aren't. I don't
know of a free patch to fix the slow "disk free" operation.

>I would be happy to live with it but for CAB which seems to want to

>not an option as it crashes Prodata (amounst over things).

If you are going to updrade TOS then fine but if you ever think you
may want to multitask at some point then spend the money on MagiC
because the upgrade will not be used. I have MagiC 2 on my STFM and am
very pleased with it - you might be able to get this cheaper than the
current versions of MagiC.

>Software I have to run:

With MagiC 2 and NVDI 3 ...

>Protext 6.5
>Prodata
>Write_On

Works in singletasking mode. The versions I have do anyway.

>Oasis 1.35 (bless it)
>CAB 1.3

works fine.

>Wordflair
>Spice 2G
>Arabesque Pro
>AT-Speed and everything that goes with it (Yes I do use a PC emulator
>it's a case of having to).

dunno.

>Any advice/opinions/help would be much appreciated.

Personally, I'd go for MagiC as it not only fixes the 40 folder bug
completely, disk access is faster.

Really? I'm here on a T-1 line direct to the USenet backbone: I tried
to get a.b.c.a, with the following results:

News host responded: No such group

So, if your service shows that such a newsgroup exists, and it has
existed more than 6 months, I think perhaps either your sysadmin or mine
is mistaken. Mind you, I'd be happy to be wrong.

I would hope not, since ZControl (at least the version I'm using) doesn't work under Single-TOS, and I sometimes need to, and thus am forced to use XControl. There is an eCPX standard under developement, but apparently it's going to be part of the Freedom file selector, a silly move if I ever heard one.

I am sorry to report that Mr. Dale Velk has made available to me an excerpt of a report filed by SyQuest Technologies with the US Securites and Exchange Commission, in which they assert that they expect to cease sales of the EZ135 by October of 1996. Their sales predictions for their new EZ230 are far from optimistic. They sound like a company ready to give up the ghost. If there is demand for it, I'll be happy to post the document. Too bad; the EZ135 is an excellent product, and I hate to see it go :-(.

In Msg A58790@B, Chris Wilkinson (chriswil@southern.co.nz) wrote:

>FOLDRxxx.PRG to give more system memory but that still doesn't work.

Don't use foldrxxx.prg with MagiC. Instead, there's another program to do the same thing under MagiC: addmem.prg. The installation program has put it into \gemsys\magic\utility\extras\addmem.prg on my system -- just search your hard disk for it (try 'find \ -name addmem.prg -print' on your boot drive if you're using Gemini and/or Mupfel). Put addmem.prg into your auto folder.

>Is MagiC 4 not fully compatible with NVDI 3.01?

Actually, it is. But maybe there's some bug in NVDI that causes the problems. IIRC NVDI 3.02 was a more bug-free version than 3.01.

>The send light on the modem went crazy

Sounds strange and it doesn't happen here. I only have to disable the pre-emptive multitasking if I want to use STiK.

>>All advice welcomed!

get a binary archive of mintnet as your gcc seems to be lacking a few libs
probably . It is simple to install . Copy the device drivers to your mint
folder and they will be loaded at boottime.

there is also a binary distribution of PPP available, install that and edit
everything in /etc/ppp ... mostly the options.tty? files.

if one of the newer versions of DIP has been ported (that support PPP) then
that makes using PPP easier than chat which to be honest can be a bit of a sod

you need versions > 3.3.7n iirc.

> Hello Anthony;
> Well why not just use Oasis135 if you are going to use ppp only . It's
> a lot faster then Mintnet and a lot easier to use for Mail , Ftp

what nonsense !!!! mintnet is MUCH faster than Oasis135 (and also supported)
NOS which forms the backbone of Oasis v1 has not been updated for years.

I can only regard the constant wineing amoungst nos(ansd oasis) users (all
platforms<nos> about "lost" mail ,news etc as being self evident as reason
against the case for mail being "easier".

as for ftp well I dont think that nos's ftp supports 1/100ths of the options
available from ncftp . Certainly not regex,hotlists,auto login and saving of
default directorys amoungst other pretty essential features which save lots
of frustration if you have dialup net access. Furthermore I wouldn't advise
trying to run more than 1 ftp session with nos in whatever flavour (pc or atari)again no
problems with mintnet/ncftp.

> etc... As for the web part you can use linx in mintnet and then view
> your picks off-line .

or not bother with them at all ... there a mere cosmetic IMO most of the time
if you are only after information , if he is bothered about that then chimera
is available for mintnet.

c> theoretically it is possible to just handle the data on Disk.

One program that does do that is 1st Guide by Guido Vollbeding.

I usually have the problem of stripping out my Auto folder to display some of the larger JPGs I've gathered. I used the Positive Image demo to determine that a JPG I had was 2.4Mb in size and obviously it wouldn't load into the 1.8Mb of free RAM that I had. Using 1st Guide the file was loaded and dithered down to 16 colours on my graphics card enhanced display and only consumed a couple of hundred kilobytes when displayed! I then proceeded to load a JPG of 5.3Mb (yup, that's what I said!) and display it in both 16 colours and 256 colours!

As such, I'd recommend it for use with the likes of CAB, where free RAM is often an issue. It supports the following formats and UK support is through Joe Connor at Interactive.

~~~~~~
.IMG GEM-(X/T)-Image picture files, Level-1/2/3
(1 Bit Monochrome up to 12 Bit RGB XIMG Colormap,
RGB-TrueColor/Gray/Alpha TIMG direct pixel)
.IFF Interchange File Format: ILBM - Interleaved Bitmaps
(1 Bit Monochrome up to 12 Bit RGB Colormap)
.GEM GEM-Metafiles (including bezier curves under
appropriate VDI, e.g. NVDI >= 2.12)
.RSC GEM-Resource files
(simple up to 64 K and extended > 64 K)
.PNG Portable Network Graphics, all 'flavors'
according to the current specification
.JPG
.JPE
~~~~~~

.JPEG Joint Photographic Experts Group - pictures:
JPEG/JFIF-Standard (24 Bit TrueColor, 8 Bit Gray),
Baseline/Multiscan/Progressive Support
.MPG
.MPE
.MPEG Moving Picture Experts Group - movies:
MPEG-1-Video-Standard (24 Bit TrueColor),
MPEG-1-System (Video+Audio interleaved)
.SAM
.SND
.AVR Sound-Sample files
(8 Bit Mono only at the moment)
.DOC
.OUT
* Textfiles (including attributes)

I can't remember whether we tried this before, Phil, but I do seem to
remember that one person tried this and it *did* work.

In with STFax v2.x I found the public domain program SERPTCH2, which states
this in the docs.

~~~~~~
SERPTCH2.PRG DOCUMENTATION April 15, 1991 by Allan Pratt, Atari Corp.

All versions of Mega STe TOS and TT TOS up to 2.05/3.05 have code in the BIOS
to communicate using the MFP and SCC serial ports. They all share a few
problems:

1. If an SCC port's word size is set to less than 8 bits, the high bit of
the byte you read is not correct. If you are using parity, the high bit is
the parity bit as received. If you are not using parity, it's a one. It
should be masked off (read as zero), as it is when you use the serial port on
an ST.

2. If you use parity on an SCC port, and there is a parity error, the
character will be placed in the input buffer anyway. This is not the same as
when using the ST-compatible serial port, where characters with parity errors
are discarded.

3. Setting the flow-control modes of some ports does not work.

4. The Iorec(0) call does not work correctly on the Mega STe.

The program SERPTCH2.PRG fixes all of these problems. It is a TSR and can be
run at any time, but is best run from the AUTO folder. Newer versions of
Mega STe TOS (newer than 2.05), and TT TOS (newer than 3.05) have these fixes
built in, and thus do not need the patch. The program analyzes what machine
it is running on, what version of TOS is running, and whether it has already
been installed, and reports what it finds. It prints "SERPTCH2 serial patch
~~~~~~

now installed" when it installs itself, or a message explaining that it is not needed and why. It uses an imperfect method (XBRA) to see if it has already been installed, but no harm will come if it is accidentally installed twice.

The program ("SERPTCH2.PRG") and this document file ("SERPTCH.DOC") are placed in the public domain. You may copy them, give them to friends, upload them to bulletin boards, etc. We ask that you not modify the code or documentation, or that if you do, you name it something other than SER

Damned strange! Did you alter the progs at all, as I think myself,
Boris, and Neil just dropped the default programs in and all worked
perfectly.

```
Umm... guys, I went through the trouble of creating
alt.binaries.comp.atari8bit a while back - why not use
it? I can think of only two reasons:

1) The 'binaries' part of the group name will automatically
ban it from some news servers.

2) The 'alt' part of the group may do the same.

The only thing that would really be better than the
existing group would be a new one in the 'comp.*' hierarchy (sp?).
If someone wants to try and push that through, I say 'go for it'!
```

>and understandably this can be annoying.

You can at least take comfort in the fact that it won't just be your articles which are annoying. To anybody with a decent newsreader, comp.sys.atari.st looks like a complete dog's breakfast, as does any other group where a few active posters use Oasis v1.

>I think the problem is caused by Oasis doing the 'threading' just
>using the Sybject line, and other newsreaders using other 'hints' as
>well.

These other newsreaders refer to the References line, which is supposed to contain the Message-IDs of the previous articles in that thread. Threading on subject line alone is just plain wrong, and not adding a References line to outgoing articles is worse. This problem was brought to Phil Yeadon's attention on several occasions, and Oasis 2 does make an attempt to support proper threading, albeit a pretty poor one (as of 2.05).

>the question is: is this my fault, or down to Oasis ???

The latter.

>is there anyway I can prevent it ??

You could always edit your outgoing articles in the spool directory and manually add an appropriate References line, otherwise:
a) Use Snews instead;
b) Use Oasis 2 instead;
c) Nag Phil Yeadon into putting together Oasis 1.36.

All versions of zControl from v0.21 onwards (currently at v0.23) can
run under single-tasking.. read the docs...

IIRC you have to put the following line in zcontrol.inf

SINGLELOAD=TRUE

(TRUE may be the number 1.. I can't remember.. read the docs)

There is a free patch knocking about somewhere. I remember it being on an ST Format disk (many,
many moons ago).

Next time I'm away home back to my old STFM (away from this spanking Pentium Pro 200 ;->), I'll
see if I could dig it out.

hi there atari ppl!
i was hoping some kind person out there in atari land
could give me some advice. i want to upgrade the memory
on my atari 1040STE... can i use standard pc simms
i wonder? what speed/parity/size simms should i get?

i would guess standard FPM 30 pin simms without parity
would be ok, but i dont want to destroy my ST trying!

can anyone please help?

thanks
Ian

> One program that does do that is 1st Guide by Guido Vollbeding.

Oops, of course. I just accidentally looked in this group, while usually
hanging around in other, platform-independent and UNIX/X-related,
groups,
and being involved in several development groups in the net via
mailinglists.

The memory management in 1stGuide is indeed unique, such that neither
the source (compressed) nor the full-color uncompressed image need to
fit in the available memory, but only the final screen-adapted pixmap.
(In case of JPEGD usage on the Falcon, the uncompressed source data
does need to fit in mem, however, due to the less capable interface).

While this is of course an important issue especially in the case of
a monochrome display, I'm currently rather concerned about displayed
image quality in higher color modes.

I'm actually rather frustrated about not to find a program for *decent*
view of high quality photographic images on a High-Color (16 bpp)
display
under UNIX(/Linux)/X, using a special dithering technique like I used
over years in 1stGuide for this case. My primary example for this is

http://www.esc.de/digifoto/land_jpg/monument.jpg

I use Netscape, xv, gimp and other tools on a Sun-Sparc or Linux-Box,
and watching this in 16bpp (HighColor) you will notice that the blue
sky looks rather awful. While 16bpp is generally much better than 8bpp
(256 colors), it is such critical images where you see the limited
color range in HighColor and the difference to *real* TrueColor.
However, with the widely available 2MB graphics cards you can use
appropriate display sizes (1024*768 and up) only up to 16bpp, for
24 or 32 bpp you must have at least 4MB (otherwise display size
reduces to 800*600 or so).
The adaptive dithering scheme in 1stGuide produces nice results even
in such critical cases, whereas the use of such algorithm doesn't
seem to be common elsewhere at the moment :-(.
I found only the software Paint Shop Pro for Windoze being able to

do this thing (if explicitely chosen).
Even Photoshop 3 under Windoze didn't get it at all (of course,
that's a typical 'industry standard' program ;-).

Thus I find myself in the typical situation of missing a particular
feature for my needs and being forced to develop my own solution.
So I will adapt my general algorithm for image rendering to X,
and I will care about to include it in the available packages
(xv, Tcl/Tk, JPEG/MPEG/PNG source distributions etc.).

Regards,
Guido

Let me first apologize for the more volatile members of our group. We've
been told for so long that "Ataris are toys and you don't need any binary
groups" that we tend to shoot first and count the bodies afterward now.

Up to a point, I agree with what you say. However, I was told by one of
the group mentors that the likelyhood of getting c.b.a.s revived was either
slim or none, and given the history of the votes recently, I'd lean toward
none. I did submit the proposal to group mentors; it was shot down in
flames, to coin a phrase.

Thus, I decided "to Hell with the Big 8" and went the alt. route. So far
my efforts have yielded much discussion, but little in the way of a usable
newgroup message. <SIGH>

Hi Joe, on 14 Jul 96 you wrote:
v> Organization: Delphi (info@delphi.com email, 800-695-4005 voice)
v>
v> I used a couple of different serial patch programs when I had TOS 2.05.
v> Serial Fix and a serial patch program from Atari if I'm not mistaken.
v> Both of them worked with Straight FAX. I could not get Hsmodem to work
v> with ST Fax.

STraight Fax versions 1.05, 2.20 and 2.50 worked for me with TOS 2.06 along with HSModem, but now I use Magic 4 (and XMEN_MGR in my Auto/Apps folder) it refuses to dial out.

The Serial Patch progam you mention is the same one I mentioned earlier. It needs to be used in conjuncton with (before) HSModem AIUI.

I've not tried with HSModem 7 yet...

>Then it ALWAYS logs in fine!!!!

At least you guys seem to be using Oasis/ICE, I can't get it to connect with my nameserver. I can log on fine but immediately after the log in I get a checksum error, after that it won't connect to my news or mail server. If I try FTP I have to type in the numeric ip address if I use the name, such as ftp.cnam.fr, it won't get resolved.

I've been trying to get this running since the first release. I had less problems getting NOS and MiNT/MintNet up and running.

```
F > (I'm using 1.2) it crashes frecuently; alone or with many
F > ACC's and PRG's in memory.

What version of SpeedoGDOS are you using? I had many, many, many
problems with Atariworks (and Papyrus wouldn't work at all) until I
upgraded to v5.0c of Speedo. (What is the status of Speedo,
considering the fate of Compo????) Anyhow, That's my 2 cents worth.
You might want to consider Speedo the cause of some of your
problems.

Check the TCP parameters in DEFAULT.CFG:

MTU = 1500 (but ask your provider)
MSS = 1460 (= MTU-40)
DFB_SIZE = 2920
RCV_WND = 2920 (small multiple of MSS)

No guarantee, but it may help.

Greetings from Holland!

>
>I went back to 06, obviously.

FWIW I didn't have any checksum errors when beta testing on my ste
with hsmodem6. On the tt using hsmodem6 it was a completely different story -
screenfulls of TCP and IP checksum errors as well as packet corruption in
both mail and news; in fact I don't think I ever got all my news in
one go. Now on the tt I'm using hsmodem7 and I get one or two checksum
errors now and again. News hasn't hung once since I installed it.

I suggest that the version of hsmodem best suited for use with ice is
dependent upon your machine/serial port.

Best wishes

Neil

774. FS/T: Atari ST items [07/16/96]

Newsgroup: comp.sys.atari.st
Date: 1996-07-16 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4sfaa0$38v@dfw-ixnews4.ix.netcom.com>
Source record: 141723

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 07/15/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

NOTE: I am interested in trading for other *NEW*, shrinkwrapped
ST games that I do not already own. Please send a trade list. I
have *nothing* from Atari.....yet :)

SALE CONDITIONS:

1) Sales are first come, first served. For faster service, please
include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
given priority (especially if the trade offer overwhelms me).
I collect for over 40 different systems, so please feel free
to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) No package deals on games or systems. All prices are clearly
listed.

6) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

7) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

8) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item
and $1.50 for each additional item, unless otherwise listed. If
you order enough items I can weigh the order as a package, which
might reduce the shipping costs.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$12.00 A.L.C.O.N. (Taito)
$ 9.00 All Aboard! (Terrific Software)

I've tried two of my three accounts on different services now, and both
report that a.b.c.a does not exist. While you may have created it
locally, it isn't available on the Sprintlink backbone.

Hi. Can anyone help ? My brother's just been given an old 520ST
without any software.. he doesn't have access to the net, so I
said I'd look for some games and a word processor etc. However,
I haven't got a clue what to do with .ARC and .ZIP files. If I just
copy them to a DOS disk will the Atari recognise the format and
unpack them ? Or should I pkunzip them first ?

Thanks for any help.. please mail me: tom@muscat.co.uk

e > most costly way of doing this. Also, do any of these require
e > soldering and/or removing of the rf shield. And what pin size
e > simm module and max speed do the 3rd party boards accept.

Hi Tim - I recently got my Falcon upgraded to 14 meg using the
RAM Gizmo from chro_Magic, and will go on record as saying that this
is probably the simplest and easiest way of doing an upgrade. It's a
board that attaches right to the pins where the original Atari board
is attached. No soldering, no disposal/modification of the shield.
There are a _few_ Falcons that will require the removal of the
internal speaker to allow the Gizmo to fit.

As for the SIMMs - the Gizmo takes 30-pin SIMMs, with the speed
recommended being 70ns. The number of chips on the SIMMs doesn't
matter either, but look at the possibility of getting the three-chip
models, which tend to be a bit cheaper. Low profile is also
recommended, although my brother (who helped me with the mod, as I'm
somewhat nervous about poking around inside a computer, and he is a
trained professional) pointed out that there is quite a bit of room
inside the Falcon for normal height SIMMs (he was also surprised
about Atari's claim that the propriety board was the only way they
could fit in RAM - plenty of room to fit SIMMs, he said!)

chro_magic lists the RAM Gizmo at $99 US unpopulated, although
it is possible to get it as low as $79 from the mail order dealers.
Chro_Magic is, however, currently doing a special promotion of a RAM
Gizmo populated with 14 mB on board for $249 US - you can get in
touch with them at 1-417-623-7393 for more details. Hope this helps.

... I get into enough trouble without a tagline!

OK, Boy. You lerned how to use your Editor and cut out the quotes. Next step in our lesson "How to write in Newesgoups" is to learn reading the quotes correctly. Obviously we have the symbol > ocurring three times here. This means, that you quotes someones quote that includes a quote. we learn from this, that the author of the message you replied to must not neccessarily be the author of the Text that you quoted...

I have a MagiCMac web page up (http://users.aol.com/zan660/mhome.htm) I willing to give all shareware/freeware devlopers space for their applications. All I ask is that the application work under MagiCMac. So if you have an application which works under MagiCMac and is shareware or freeware I will put info about that application, as well as a place for people to download it. Because I have AOL I can use up to 10megs of space total, if your application is over 1 meg upload to atari.archive and I will just link it to my site.
Email me: zan660@aol.com

This is symptomatic, more typically BTV occurs whilst in a
somnambulistic state.

> It seems to happen more late at n ight so I think maybe there
> is something that triggers it to work at night!

Certain compounds can be a significant factor such as potatoes, hops
and anything else which may be fermented and subsequently ingested.
BTV is programmed to be mostly inactive until these conditions are
met, at which time, it triggers and performs all manner of
inexplicable activities.

> Please let me know if you have any information!
> This is really getting to me now, and otheres!

I'm afraid you really are quite badly affected. I'm sure you are by
now aware the initial symptoms are thuds in the night. The next stage
is tripping over objects which are patently not there. It is some
weeks before reproduction occurs and the effects you describe become
pronounced. You will consider yourself unfortunate indeed, to
discover that the later stages of the affliction are completely
unknown.

Hello,
I recently bought a cheap second hand copy of Infocom's Bureaucracy.
I've got to the bit where you get questioned by the paranoid in the camoflaged house. I know the package is supposed to come with a spoof magazine called Popular Paranoia, but it's missing from my copy. (Didn't even get the box.) Can anyone sell this to me (or the complete package, an IBM version will do) or supply me with a copy of the magazine. (The last option is a trifle dodgy, but Infocom are long gone, I think.)
Paranoidly Yours,
Augeas.

Hmmm... I *do* see it from two totally different accounts
(one on Primenet, the other PSI). My only guess here is that
some servers don't automatically start carrying new groups created
in the alt.* hierarchy.

The group *was* created by going through all the "official"
channels and such, so it really should be out there.

Any new alt.* group created for Ataris may have the same
distribution problems as a.b.c.a8, so, if nothing else I suggest
we at least find out why this one hasn't propagated all the
way through yet.

This is all VERY interesting!!! I have been telling Dave for weeks,
that there is something WRONG in the initialization and utilization
of the MODEM. And there is more than just the chksum errors, too!
My oasis had the checksum errors that disappesred on using HSMODA07.
BUT, it still doesn't always login right UNLESS I run STiK FIRST.
Then it ALWAYS logs in fine!!!!

Bonjour,

j'ai achetï¿½ un gps portable Garmin 38 pour faire du bateau. Les gps
portable ï¿½tant dï¿½pourvus de clavier dignes de ce nom, l'entrï¿½e des donnï¿½es
est assez laborieuse. Il existe des logiciels sur PC et Mac pour
communiquer, via la prise RS 232, mais je n'en ai pas vu sur Atari.
Quelqu'un a-t-il dï¿½jï¿½ vu ce problï¿½me traitï¿½ quelque part?
Merci d'avance.

Hello,

I bought a Garmin 38 gps for using on a boat, but this kind of gps have
not a true keyboard, and entering the data is quite long and difficult.
There are softwares for PC and Mac for communications with the RS232
socket, but I have never seen one for Atari computers. Has any body ever
see this question dealt?
Regards.

This one has 4 megs RAM, +4 megs FASTRAM = 8 megs total RAM, internal HD, keyboard, mouse, PLUS tons of software such as:
PageStream, LDW Power, Data Manager, Silhouette, Word Perfect, Ultrascript, CompoScript, Geneva (multi-tasking), Encore, games, and lots more.

All for $440 - I saw another TT for a little less, but the software is worth it for this, and it is all set up. For free you can have an SLM 804 laser printer with extra toner AS IS, IF you pay the shipping on that monster.

Leave e-mail or call 904-562-3332, Wally Mayo, Tallahassee, FL.

>what nonsense !!!! mintnet is MUCH faster than Oasis135 (and also supported)
>NOS which forms the backbone of Oasis v1 has not been updated for years.
>
Since when has Mint been faster then a Gem program ? Nos042 and NosPop
have you ever heard of those for starters ? As for Mint being
supported the only new thing in Mint is Mintnet 090 ! Not very
impressive.

>I can only regard the constant wineing amoungst nos(ansd oasis) users (all
>platforms<nos> about "lost" mail ,news etc as being self evident as reason
>against the case for mail being "easier".
>
Disregard the Pc version of Nos and let's talk about the Atari version
and I believe the only people complaining of lost mail were primarily
using a Demon account . Oasis can't take the shit if the Techs at
Demon can't configure a Unix system properly !
>as for ftp well I dont think that nos's ftp supports 1/100ths of the options
>available from ncftp . Certainly not regex,hotlists,auto login and saving of
>default directorys amoungst other pretty essential features which save lots
>of frustration if you have dialup net access. Furthermore I wouldn't advise
>trying to run more than 1 ftp session with nos in whatever flavour (pc or atari)again no
problems with mintnet/ncftp.
>
Use the set-up keys in Oasis for all your Auto logons . I haven't had
any problems going to as many sites as I wanted in a row ! You seem to
be getting the Pc version and the Gem version confused !
>> etc... As for the web part you can use linx in mintnet and then view
>> your picks off-line .
>
>or not bother with them at all ... there a mere cosmetic IMO most of the time
>if you are only after information , if he is bothered about that then chimera
>is available for mintnet.
>
Chimera is the last piece of garbage I would recommend to anyone . I
was at the TAF convention in Toronto anticipating finally having a
Web browser for the Atari line . To say I wasn't amused is the

understatement of the year . Think about it Xwindows , Mint and then
Chimera all on a 1040 st ! That's the difference Oasis runs on all
Atari's something that can't be said for Mint . The one program that
came out with potential was Duftp but where's the new version . Keep
one thing in mind once Stick comes out with a PPP the game is over
because this is the only program that gives all Atarians a chance to
finally use their system for the Internet .
PS . Till Spider comes out !

800. VIRUS ALERT : BTV

Newsgroup: comp.sys.atari.st
Date: 1996-07-16 00:00:00 UTC
From: Ade@finitive.demon.co.uk
Message-ID: <837564278_OASIS_@finitive.demon.co.uk>
Source record: 141842

Hi Atari Peoples :)
I have some bad news, a new virus has been found, and it could
easily be effecting your computer!
The virus is known as BTV, or Baby Turtle Virus.
This virus doesn't seem to be vetry dangerous but can easily
make a nmess of things and COULD in the wrong situation cause
serious damage !
At this time there is no known way of wiping out this virus,
many suggested methods have been very difficult to carry out!
(For more info on suggested methods email me!)
If you have any extra info on this virus please post here so
we can all share and maybe wipe out this dreadful thing !

Ooops nearfly forgot to tell you the sysmptoms so you know
what to look for abnd will know if you have the virus or not!
Symptoms :-
Extra letters appear or letters dissapear in texts or type
commands, I have also noticed it occuring while I have been
using IRC!
It seems to happen more late at n ight so I think maybe there
is something that triggers it to work at night!

Please let me know if you have any information!
This is really getting to me now, and otheres!

Waiting your replies,
Ade.

I think I replied in email. However I forgot to mention, the RAMGizmo is
a solderless installation. You remove the memory board and plug this one
in, populated with the requisite SIMMS. In some Falcons, it may interfere
with the internal speaker so you have to remove it if you haven't already.
It requires 30pin simms and will do 4 or 14 MB (set with a jumper).

>Personally, I think sorting by subject makes more sense anyhow, but no one
>asked my opinion. ;^)

Just as well, really. (:

If you thread by subject and message-ID (because you couldn't really thread
by message-ID alone), you can easily see who was responding to whom. Take
the following example:

Joe
Bob
Fred
Don
Al
Tim

Bob, Al and Tim all responded to Joe's article. Fred and Don both
responded to Bob's article.

Under the same scenario, but where only subject-based threading is
employed, the tree could look like this (depending on when the articles
arrived on your news machine):

Joe
Bob
Al
Fred
Tim
Don

And it's not inconceivable that an article could show up in the thread
before the article it was written in response to. Threading by subject
alone just isn't good enough.

Yeucchhh! Wouldn't touch any Gateshit with a bargepole: I *do* use a 486
at home, but run it under a proper multitasking O/S (no, not Linux: the
one from IBM :-).

But at work I use VAXen and Alphas, with VMS, and ANU-NEWS; also Suns and
other Unix boxes, and the news server runs inn.

> but some of us have ATARI's and log on through SHELL - not even SLIP!!!
> all my newsreading / emailing is done ONLINE and using ANSI graphics.

It was my understanding from reading your posting's headers that you were
using tin; it was also my understanding that tin did indeed handle the
mailing to the moderator automatically. Was I mistaken? Or is it
malconfigured?

> Let us have our alt.binaries.atari.st group and create yourself some more
> IBM binaries groups.... as if you didn't have enough! ... we don't have ANY!

I still think (admittedly as an innocent bystander that's *trying* to
help) that the best course of action would be to appoint a new moderator
(or even better a team of moderators) and get David Lawrence to newgroup
comp.binaries.atari.st again, albeit that the .st in the title appears to
preclude users of other Ataris: one could just blame history, but have
the (revived/revised) charter make it clear that all Atari platforms are
welcome.

I don't know anything about THAT; I'm not using Netscape at all, much less any "default" provider of anything. Straight ASCII serial-line here, at least until the golden age of plain-text disappears for good one of these days :-(...

>[...]I have a messagebot to
>post the charter every 2 weeks, even if nothing else ever gets posted.

Heh. Unless you post the charter in binary, the charter post will, itself, fail to abide by the "binaries only" provision of the charter. :-)

>The problem began in the Sixties, when it first became necessary for both
>parents to work outside the home in order to support the accepted lifestyle

~~~~~~
The WeST of Scotland Atari User Group

In February 1996 the WeST of Scotland Atari User Group (WSAUG) was inaugurated, with a 4-weekly printed newsletter and 4-weekly group meetings. It soon struck up relations with all the other user groups in Scotland, the UK Association of Atari User Groups (UKAAUG) and takes its place within the CiX atari.user.gps online conference, where other local and national user groups and Atari-connected companies have a presence.

In addition to the newsletter the WSAUG has a local online discussion area at 42BBS on 01256-895106, the home of The Falcon FacTT File (FFF), and a World Wide Web page at url

http://ourworld.compuserve.com/homepages/magicka/homepage.htm

Membership of the user group now stands at 50 with an average attendance at the meetings of 25. Members are aged from 11 to 60 plus.

STAG
Scotland's TOS/Atari Group

For some time I have been concerned with the sudden explosion of user groups and the apparent dilution and duplication of effort in their operation, particularly given the geographical proximity of the existing groups within Scotland. In that context I believe there is a strong argument for a national Scottish Atari group.

I propose this would take the form of an "umbrella" organisation and would collate all memberships under a single heading and subscription. The group would be affiliated to the UKAAUG and would be known as STAG (Scotland's TOS/Atari Group). STAG's members would be made up, initially, of the component parts of WSAUG, the Central Scotland Atari User Group (CSAUG), the TOS Users' Group (TUG) and the Atari User Group of Scotland (AUGS). In addition we will actively seek new members - the combined membership of the existing groups is currently around 100.

I have already spoken to the organisers of all the above mentioned groups, who agree in principle to the proposal. Each area could retain a local group and, for example, the 4-weekly meetings that WSAUG have at the moment would be continued
~~~~~~

under the heading STAG(WeST). However, other meetings could be established by more distant members as the group hopefully expands. There are already moves to have STAG(EaST) meetings arranged on the opposite fortnight to STAG(WeST).

The main difference to the situation we have now would be a centrally produced and funded newsletter, with a single subscription for all members. I would see each group existing in its own right, making use of a central resource for information & advice, the newsletter and other services. I also expect smaller groups could form, in the likes of Inverness and Aberdeen and further afield, that take the newsletter as a way of keeping themselves up to date with general news and utilising the resources of the greater group - also, offering articles or reviews back to the newsletter and making themselves known outside their local area. Isolated individuals could even subscribe without feeling that they were a distant part of a far away organisation like WSAUG - I feel that the name 'WeST of Scotland Atari User Group' has inhibited some potential members from joining because of the geographical implications. The new group would allow people from all over Scotland, as well as elswhere in the country, to participate.

The proposed steering committee of STAG would form along these lines:

Chairman, Secretary, Treasurer, Newsletter Editor, Junior Representative, Web-master, and representatives from STAG West, STAG East, STAG Central, and STAG Northern.

It would be possible for one person to hold 2 posts on the committee, but that person would only have one vote. Any posts not filled at the AGM could be filled by a committee vote at a later stage should it become necessary. Any other posts that were deemed appropriate could also be established later.

I have taken soundings from various interested parties, all of whom have been supportive of the proposal. I have various realistic ideas, in addition to subscriptions, for helping to finance the newsletter which would remain in the same basic format as the WSAUG one, and would be 10/12 pages long every 4 weeks. It would have an extended Classified Ads section due to the links with Fraser Blacklaws and AUGS. The biggest difference to the present WSAUG newsletter would be a different cover and perhaps articles from more diverse sources. I have no intention or desire to launch a disk magazine to attempt to rival Atariphile. I would, in fact, hope that STAG will maintain and strengthen it's existing links with 42BBS/FFF, the Wessex Atari Group (WAG) and UKAAUG.

We should also seek ways in which to promote STAG and bring it to the widest possible audience both in Scotland and elsewhere. My intention is to open a STAG topic within the existing atari.user.gps conference on CiX, and Colin Fisher-McAllum has said he will continue to support Scottish User groups via 42BBS with both message and file areas. The WSAUG WWW page will be updated to reflect the change to STAG and may be used to advertise various Atari related companies. I feel that the various on-line activities outlined here, along with the paper based newsletter is the best way to keep us all in contact with each other.

An adult or family (ie an adult and any number of under-18's) membership subscription would be £14 per annum under-18 members who have no adult member in their family would pay £7 per annum.

Alasdair Goold
Chairman - WSAUG
16th July 1996

I attempted to post to this group on more than one occasion - at
no time did I see any information on how to do so, and received no
replies from attempting to do so requesting suitable help. It is no
wonder the group was unused therefore.

At the time the group was going to be removed, I suggested that either
a new moderator be appointed or moderation be removed. To my
knowledge, no consideration was given to these points - certainly no
reply was forthcoming.

When the group was finally removed, there was no attempt even at
presenting the numerical votes for and against to support the
removal decision.

Take these points together and it difficult to come to any other
conclusion other than that decision to remove the groups had already
been made. ;-|

s> I know what you mean Harry :), if you cant do selective downloading
s> then the group is totally useless to you as you might be on for hours
s> downloading stuff you dont want. But I think most people do have this
s> facility?

I do through my CIX account, if ever I worked out how to use it, but not
through this one, which is via Paul Baker's BBS using Net2Net. Others will
differ though and there'd need to be a very strict policy of subject headers
(including multipart'd UUEs) - is that possible in an unmoderated group?

>> btw Tony, I grabbed a look at your web site online before I got around
>> to UUDecoding the copy you sent me. Not bad! <g>

In ZControl v0.23, add SINGLELOAD=TRUE to your ZCONTROL.INF file and it'll
work - it did for me before Magic4 arrived...

It seems there is a problem with Antmail 0.7.7, change to 0.7.6 or 0.7.8
and you should solve your problem :-)

Cross-posted to: comp.sys.atari.st,comp.sys.atari,comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.programmer,alt.config

Guy, I am including the balance of the comp.sys.atari.* groups in this discussion along with alt.config; it may be appropriate at this time to include news.groups as well, but I will wait for comments before doing so.

Guy Harrison wrote:
>
(I include here quotes from a couple of previous posters in the same thread - to save time, I'll reply directly to these as well.)

> >> this group are primarily interested in a place to illegally
> >> repost copyrighted software.

This comment (whose poster may remane nameless unless he wishes to step forward at this time) is frankly slanderous. As the proposer of the new groups, /and/ an established software author, I take personal umbrage at the expressed implication that I am a pirate. I suggest you ask the former BBS sysop and the author of RatSoft BBS how I feel about pirates - of course, he may not be aware of just who blew the whistle on his pirate activities.

> >> Annius V. Groenink <avg@cwi.nl> posted messages to the group asking
> >> whether anyone still found it useful and the vast majority agreed

> >> the moderator and the readership, it is now removed.

This is patently untrue. Annius posted one or two messages in comp.sys.atari.st remarking that he was planning to have the group rmgrouped, but the "vast majority" most of the readers most certainly did NOT agree to remove the group. I think most of us simply found it impossible to get anything past the moderator. Personally, I voted to retain the group.

An now, back to Guy's remarks:

> I attempted to post to this group on more than one occasion - at
> no time did I see any information on how to do so, and received no
> replies from attempting to do so requesting suitable help. It is no

>
> Guy Harrison
>
> guy@swampdog.demon.co.uk

It certainly appeared to me that the rmgroup was "railroaded" though.
No voting results were cross-posted to the comp.sys.atari.* groups. By
that time, however, the rmgroup was a /fait accompli/, as they say, so
there was little anyone could do about it.

There is a set of jumpers on 3.5" drives that tell it where it is on the drive chain. If you get a drive you should also get full documentation for it. If these jumpers are not set correctly, the drive will not work.

This also may be the root cause of the compatibility problems you have been seeing.

The floppy mech. in my last ST was nothing more than the 720K version of the 1.44K drive in my first clone (Epson). I have used Toshiba, Epson, Teac and Sony mechs without problem in STs.

Technically, flanging is different from phase-shifting, but to
non-musician/engineers, they're closely related. Flanging could be thought
of as phasing squared. Its name comes from the original inspiration in
Phil Spector's studio, when he was double-tracking a vocal, and
"accidentally" put his thumb against the flange of the tape reel, causing
the two copies of the vocal to swirl in a spectacular way. It's now done
with digital manipulation of samples. Purists claim to be able to hear the
difference, similar to the way guitarists can tell tube amps from trannies.

Trivia 101.

Musician's Software Exchange, in Florida, used to carry this sort of thing. I don't have any of the disks from them handy, or I'd give you the address. (SnailMail) I know they carried a D110 editor, and MT32. I don't know if they're still in the game, I haven't dealt with them for a few years. I'll look for the address, ans post back another day.

Not too many. Knarf (Frank Bartels), presumably, and of course Julian
Reschke.

But:

- give me a newsreader on the ST which implements MIME (*) fully (nope,
neither UPoint nor Okami do); tin does.

- give me a mail agent which implements MIME fully

- what news servers/full UUCP packages are there that run without MiNT?

- what _good_ IRC clients do you know?

>Or are you advocating that non-programmers shouldn't be allowed
>to access the Internet?

No, you needn't compile them themselves, it's just that you can use them
as soon as someone chooses to compile them.

Thorsten

(*) RFC-1521 _and_ RFC-1522. This may not be of too much interest for
English speaking users, but in Germany both are becoming more and more
popular for news articles and mails

AT> simm module and max speed do the 3rd party boards accept.

Hi Andrei,
I have a memory card from Hard&Soft, called "Vantage 2000", which has room for one 72-pin SIMM - either 4 or 16MB. It's no bigger than the original RAM-card and the SIMM is placed under the card, so you don't need to do anything but exchange the card.
Most SIMM's you can get hold of are 60 or 70ns and they work without problems and I don't believe any 72-pin SIMM's are too slow.
Atari's own 16MB-card didn't have SIMM's, but surface-mounted DIL's :(

Best regards,

Claes

Thanks Guy, didn't realize it was this bad :(

Anyway there is a programme around to help out here, it's called
Assymetrical String Sequencer, or ASS for short which tries to help
out with the problem, (written by someone called Dex), DO NOT use v0.1
as this is no help to you look, for version v0.2.
version 1 called ASS_v01.lzh
version 2 called BIGASS02.lzh

Okay more info soon (I promise)
Ade.

> but no one asked my opinion. ;^)

The problem with that is that is does not put any semblence of order to the
threads , a subject as you well know can branch of into little sub threads
and no change of subj line means you can be following in a meaningless direction
like walking through a room catching only snippets of conversations instead of
getting a true record (in order) of the conversation.

Another unsolicited opinion :-))

TM> Can anyone help ? My brother's just been given an old 520ST
TM> without any software.

I assume you're not at all familiar with Atari ST, so I'd best check these basic questions:

1. Does it _have_ a floppy disk drive? (Some were built in; some were plugged in & he might not have gotten the drive with the computer!)

2. Is the floppy drive single or double sided? (360K or 720K bytes) If it's single, it's tough to find software that fits on one disk.

3. The ST can read & write IBM formated disks - however, you will have to format to 740k double density - _not_ HD disks. And if his drive is single sided, it can be difficult to get your clone to format & use 360k disks. You will not be able to read disks formatted on the ST in your PC by the way - the early versions of TOS create disks that an IBM doesn't recognise. There are ST programs to correct this, but I hear it is often better to format disks on the IBM in any case.

4. There are several programs that will extract ZIP & ARC on the ST - I suggest you look for them with a *.TOS file extender. TOS programs will run directly on an ST; often ZIP & ARC programs are stored as TOS programs. (When he double clicks on them, they will expand themselves into normal programs, with docs.) However, if he has a single sided drive, it will be hard for him to unzip larger files!

From: CALLUM.LERWICK@flight.org
Message-ID: <fc6_9607180106@flight.org>
Source record: 141630

I just upgraded to a 14.4 from a 2400, and am having flow control problems. The modem is an Intel 144/144e, and the computer is a 520ST with no serial mods. In the auto folder is Warp9 and HSMOD7. MFP.PRG is set with default settings, exept for a roomy 2048 byte buffer both input and out. I'm using ANSITerm, but I've tried other programs also. The problem is if text is output faster than the terminal program can display it, the buffer eventually fills up, RTS/CTS does its thing and the RD light on the modem turns off, but the terminal is still displaying from the buffer. Once the terminal catches up, the modem doesn't start receving again. If I switch RTS/CTS off it starts receving again. Zmodem transfers work flawlessly with XYZ though. Even getting up to 1914cps with text files. :)
Anyone know whats going on? Here is the AT&V output if it helps anything:

PC> It takes 50 seconds to boot it though

That's not real fast, but it takes a long while to load Netscape on a P5/133,
also - it's the application, not the system.

c> I've just got NOS POP3 working PPP :)
c> So, now I need software to do Newsgroups, Email, FTP, WWW, etc...
c> perhaps CAB.OVL for NOS? and some others....

There's no way AFAIK to run external proggies from NOS, so a CAB.OVL won't be
much help. Darn it.

c> Also, are there any ANSI / VT100 emulator programmes which run from the
c> desktop / AUTO folder - ie replace the VT52 codes with other codes.

ANSI-ST 4.0 works fine and even has a nice ANSI font to go in the AUTO folder
with it. Works fine with NOS POP3.

You should be using Modem2 I think, not Modem1 - same socket on the back
panel, but a different chip. I think you still need a serial fix, too, such
as HSmodem.

843. Alternate Proposal: comp.binaries.atari.8bit

Newsgroup: comp.sys.atari.st
Date: 1996-07-17 00:00:00 UTC
From: mjewison@irus.rri.uwo.ca
Message-ID: <4sit9e$2dd@falcon.ccs.uwo.ca>
Source record: 141635
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy,comp.sys.atari.8bit

```
--------
My apologies if this appears twice. My news reader barfed on my first
attempt to post.
--------

One of the problems with setting up an alt.binaries group is that,
as has been pointed out earlier, many sites don't get parts of (or in
a worst case scenario) the entire alt hierarchy. The university here
just lopped off the entire alt.binaries tree several months ago because
the spool time on the server was less than six hours and the system was
thrashing itself to death.

I would propose that we try to make any group we want to see created an
"official" group in the comp.binaries hierarchy. For those of you
uninformed on what that means, here is a brief summary:

1) An RFD (Request for Discussion) goes out where the merits of creating
the newsgroup are discussed.

2) A CFV (Call For Votes) goes out where the proposed newsgroup is voted on.
In order for a group to pass, the number of YES votes must be 2/3 of the
total number cast, plus the number of YES votes must be at least 100 more
than the number of NO votes cast.

In theory, I support the creation of a binaries group - but I would rather
not see it in the alt tree. Alas, I'm not sure we would have enough people
voting in favour of the proposal to meet the second criteria for passage.

Any thoughts?

- Mike Jewison

844. Oasis 1.35E and threads

Newsgroup: comp.sys.atari.st
Date: 1996-07-17 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <837688174_OASIS_@nordnet.fr>
Source record: 141636

In article <837380724_OASIS_@phil4.demon.co.uk>
phil4@phil4.demon.co.uk (Phil Hough) said:-

>I was told today about how annoying someone found my articles :(, due
>to the fact that they weren't properlly threaded !
[snip]
>I think the problem is caused by Oasis doing the 'threading' just
>using the Sybject line, and other newsreaders using other 'hints' as
>well.

This is a big problem, and is a bug, or a no-rfc-compliance of Oasis 1.35. The rfc 850 says a followup to a message must have a "References: " header with the message-id of the original message. Or a list of all message-ids of articles written before in the same thread (all references of the last message in thread, plus message-id of this article at the end).

The rfc requires this header, even if the newsreader dont use refs to show the thread as a tree, or even dont use threading at all...

And Oasis 1.35 does not this automaticaly, in this message I have extracted your message as SPOOL/MQUEUE/ZZ.BAK (example...) then used the followup function, and once in Everest I loaded zz.bak, copied the message-id and pasted it into headers of my message... and typed "References: " before. For saving files in the mqueue directory dont use filenames with *.TXT.

That's not very simple to do, and I often forget to do it... And that is not the only problem with Oasis beeing not rfc compliant (crossposting, "Followup-to:" header not recognised, etc...). And we dont speek about GNKSA/U (Good NetKeeping Seel of Approval for Usenet software), see news.software.readers for details, which requires much more from newsreaders than strictly the RFCs...

Nija - Chuenprateep <njchuen@ix.netcom.com> wrote:
: I want to know how to fix an Atari Disk Drive. I read through all of
: the manuals and they did not tell me how to fix a disk drive. I have
: an Atari 1040ST. Thank you!

If you are really determined to do something yourself, the thing that usually goes wrong, in my experience, is the spindle bearings running out of lubrication. The drive turns too slow, and cannot write, but can read, or some such nonsense. If there is some glop showing around the screw that holds the flywheel one, it is a right hand screw, and a jewelers torch will be needed. If not, it is a left hand screw.

Get new bearings or bushings or whatever you find in there, at your friendly local bearing supplier, and put them in. Good bearings may cost more than a new drive. I, for reasons of my own, paid half again what a new drive would cost for just two little bearings.

If it seems to read and write OK, but cannot read disks from any other machine, it is an alignment problem. Some of those can be fixed with proper lubrication. Proper means very little and in the right place.

The best person to ask about that is a technician in any local computer store. It is hard to describe in words the slots in the head carrier assembly where the tiny drops of oil for the guide rod go, where the index motor shaft that should get greased is, and where the head opening tabs ride on the top plate.

Remember that oil is a conductor, for all practical disk drive purposes.
If you get any on a circuit board, you will wish you hadn't.

(Oscar Fowler mentions the already existing alt.binaries.comp.
atari8bit he started.)
I've been wondering about this. Rich Mier said correctly that
all that's in a.b.c.a. is some spam. And Rich Tietjens believes
he should be able to see it. I don't think many people can see it.
I also don't think many people can see the new a.b.a and a.b.a.d.
Somebody said these groups have to be added to the usenet groups
specifically by sysadmins, or systems are set up not to have
alt or binaries groups added. I can see the new Tietjens
groups and the old a.b.c.a. Something that has not come up
in this thread is the A8 vs ST thingy. STers generally don't
like to mess with A8 stuff, I think. STers sorta kicked the
8-bitters out of Delphi (rumor). Anyways, personally, I like
/prefer the alt.binaries.comp.atari8bit idea and keep it
separate from what I would like to see... ->
alt.binaries.comp.atariST. BUT, I do appreciate the efforts
of both Mr. Tietjens and Mr. Fowler and whatever you guys
wanna do is fine with me.

Thanks for your comments, James. I don't know anything about Delphi's history, but my feeling is that, if it says Atari on the logo, the user is (or should be) my friend. We have enough enemies, we don't need to make more within our own ranks. Thus, if someone objects to the placing of 8-bit software in a.b.a, I suggest they form their own binaries group (they could call it alt.binaries.atari.68k-bigots I guess).

What's really strange is that, although I am told others can see the two new groups I created (or tried to), and apparently can see a.b.c.a.8, my server (at my personal account) shows none of the three - but it does show a number of "warez" groups, even though the sysadmin has issued generic warnings that trading of warez will not be tolerated. I really don't understand the mentality that says "we'll make this available, but if you use it, we'll punish you." I don't /want/ to use it, but it seems to me that if the use is to be monitored, it would be much less work to simply rmgroup anything with "warez" in the groupname.

From what I understand, their stock has been getting hit hard lately
(Wall Street, not hardware). I have heard that the EZ230 was going to be
their big seller, but I didn't think that they were going to close out
the 135s. Sounds like Velk wasn't definite, from the above.

Hello all, I'm new to this group, and I hope you can help me.

I have an Atari 1040 ST which I use for music sequencing with Passport's Mastertracks Pro (Version 3, the last one they made for the ST I think).

What I'm looking for is an editor/librarian type of program. The instrument I need this editor for is a Roland U-20.

A few years ago I found a great one for the Casio CZ101 through a mail order company, the name of which now escapes me.

I'll be gratefull for any leads or directions to which any of you can direct me.

Thanks in advance,

Rod Lisowski

857. MagiC 4 problems...

Certainly, yes. I had numerous VDI bugs with v3.01, fixed in v3.02. Also,
there's a small utility called PATCH_NV.TTP that patches all versions of NVDI
from v3.01 up to v4.0x to fix other errors which are all fixed in v4.10 (it's
not an upgrade to v4.1 in itself though).

>> The send light on the modem went crazy
AL> Sounds strange and it doesn't happen here. I only have to disable

It's there - I subscribe via Delphi's Usenet groups. The problem is that there haven't been any messages approved so nothing is there. If I select that newsgroup, I'm informed that there are no new messages.

>reading STR again!

I can't take credit for that story, Rich. I believe that one came from the EduPage service which we include. Similar to the news articles that I submit, but more or less summaries. Essentially, MS is going to sue the Argentine government for pirating 90% of the software that it's using in all of its offices. Interesting bit, originally from a Canadian financial paper.

860. Dragging an entire window?

Newsgroup: comp.sys.atari.st
Date: 1996-07-17 00:00:00 UTC
From: zan660@aol.com
Message-ID: <4sk9u8$9if@newsbf02.news.aol.com>
Source record: 141652

Is there any way to move a window with out moving the outline? There are several machines which can do this, the BeBox does this and the there are ways to get a Mac to do it, however, it is too slow on a 040.....unless you are using MagiCMac! Why not try and and find a way to drag an etire window? It would be great on a TT030/040/060/MagiCMac/Falcon. I do not think an ST has the horsepower to do a good job.

Please email me:
Zan

Kevin Dixon <kevin-dixon@psion.com> said:-

>There is a free patch knocking about somewhere. I remember it being on an ST Format disk (many,
>many moons ago).

Is this a patch for the 40 folder bug? I think I've got FOLDERXX.PRG somewhere for that one. Is there a patch to cure the 114 files in a folder bug? Is it cured in TOS 1.04? I know that one will get me soon :-(

Thanks for all the help, now all I've got to do is find someone who has TOS 1.4 in stock (easier said than done)

Gaz.

From: JEDI
Message-ID: <4siot7$3hm@doc.zippo.com>
Source record: 141656

In article , njchuen@ix.netcom.com says...
>
>I want to know how to fix an Atari Disk Drive. I read through all of
>the manuals and they did not tell me how to fix a disk drive. I have
>an Atari 1040ST. Thank you!

Replace it. If you really feel that you must repair the mechanism itself:
try to find a repair manual on PC floppy drives.

Considering a replacement drive can easily be had for 50bux from
Comp USA, et al.: it is probably not worth the effort...

Check the IP address you have set for the DNS (Dynamic Name Server), the
non resolving of names is because ICE can't access a DNS to get the numeric IP
address fro the name.

Hope this helps.

Source record: 141749

The problems you were describing were fixed in 0.7.8, however
some new ones were introduced. If you are not using Magic grab 0.7.8, if
you are using magic try stepping back a version or two and this should go
away. 0.7.9 is in beta right now so hopefully a Magic fixed version will
be cleared by my beta testers for release early next week :)

>
> i)Which software is required.... and what is the purpose of each

Any point software ~ IOS and LED

Either net2net or wormhole (net2net is deeloped in the UK , wormhole in the US

> ii)How is the fidonews thing collected via the internet (with NOS)

NOS collects uuencoded email , this is the packet information for the point
software.

in net2net's case, the incoming packets are addressed to AUTONET@your.address
, net2net decodes the packets itself , places it in the appropriate folder
and IOS does the rest.

The outgoing is similar , IOS packs your mail , net2net then uuencodes the
packet itself and NOS forwards it onto your host.

> ??? iii)what is the address needed ?

<?> , only your normal demon account and the relevent FIDO style addresses

> iv)does this cost anything ?

No...unless you register Semper ~ net2net and wormhole are free

> v)are there any limiting factors.. such as BBS hours, slow downloads

None that I know of.....

> vi)which software do I need to read and reply to the mails ??

LED and IOSmail are your best bet..cheap.

> vii)how are the replys sent ??? (FTP, Telnet ???)
>

Just through uuencoded email messages....with net2net split packets in more
than one email are handled with no problems.

> I've been thinking about all that I'm missing out on in terms of fido
> nes etc.. not calling BBSs but Demon instead.
>
> However as there are no good BBS local to me, I'd rather get c.s.a.s
> cheaply than fido expensively or not at all. So If there is a way I
> can get the stuff via my (local) demon account then that would be
> great.

well if you are interested email me for a complete setup...I have a full one
ready to run...

as a you are also a demon customer the transfer should be fairly easy for you

877. Thing, ST-Guide

Newsgroup: comp.sys.atari.st
Date: 1996-07-18 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4sjvsi$nh2@dodgson.math.psu.edu>
Source record: 141661

I am trying out ST-guide, English Version, release 4, and I have come across a few documents that warn me on startup that I should get the newest version of ST-guide. The warnings seem justified, as embedded graphics are not handled properly by the program (I get the pictures superimposed with the text, both on my Falcon and my STe). Now, I'd like to know what the newest version is and where I can find it. Same question with Thing. Not taht there is anything wrong with the version that I have, but I would not find getting as newer one if it exists.

BTW, and while I am talking about Thing/oAESis, there is something I would like to ask users of those programs: I have found that some applications such as APEX's JPEG viewer for the Falcon (which is otherwise wonderful, FAR faster and sharper-looking than Speed of Light, MGIF or ImageCopy -- skeptical? try it out for yourself!) leave the screen quite messed up on exiting (this also happens under MultiTOS (AES 4.0, +Newdesk or +Thing) but not under TOS, Geneva+Neodesk or MagiC+Magxdesk. I wonder if there is an easy way of requesting a screen redraw (as there is under MagiC) or some desk accesory that would do that for you. Of course, it would be even nicer if every time that an application relinquishes control to the shell or to another application one could get an automatic screen redraw, but probably that is best left as a suggestion for future versions of oAESis.

One last question: is the oAESis mailing list archived somewhere? Thanks.

Gustavo

Most, if not all of the above mentioned programs can be found
in compiled form, from most ftp sites having MiNT stuff..
I'm not sure about all of them, since I don't use my Ataris
on the net..

884. Uploading Atari Stuff

Newsgroup: comp.sys.atari.st
Date: 1996-07-18 00:00:00 UTC
From: sm6pc@csc.liv.ac.uk
Message-ID: <DuqG02.L5v@csc.liv.ac.uk>
Source record: 141668

I wonder if anybody has any advice on uploading atari stuff onto FTP sites.
I have written many small programs, utilities and games on the ST over
the years. I would like to make them available but I don't really know much
about the internet, in fact I only discovered usenet a couple of weeks ago!

Also, does anyone have any info on tweaking the good Atari ZX Spectrum emulator,
to run faster on the ST?
I have written a couple of modified ROMS, mainly to gain some speed
(removal of memory test and PAUSE functionality) and also I have a fix for the
BCD 'daa' bug, by installing some code on 'RST 8', thus enabling me to play
'Wacky Darts' with correct scoring! I have also produced several modified snap
shots of games (Manic Miner, Horace Goes Skiing, TLL and more) that now run
faster on the ST albiet with no sound. I would be very interested in hearing the
results of other's experiments with the emulator, so why not E-mail me to swap
info? Maybe I can build a good doc, from all the accumulated information.

If there are any ST owning astronomy enthusiasts out there, you might want
to send me some of your own multiple choice questions to be included in the
freeware quiz program 'ASTROQUEST'. This was written by myself and is available
from LAPD.
It now contains over 550 questions, but it would be nice to see a lot more
questions added to make it into a more substaintial 'database' of astronomy
related knowledge, any helpers?

One more thing, a cautionary tale I suppose I should let people know:-
If you have an Ste and you are thinking of getting a T28e accelerator board
fitted (If they are still available), then beware that the blitter chip has to
be removed to perform this upgrade. I was not told this when I sent my ST off to
get it 'upgraded', and when it came back it would not run many of my favourite
programs. Although I was offered to have an additional switch installed to allow
the blitter to be used in 8Mhz mode, I declined the offer as apparently 'it had
never been done before'. So I just got my STe restored to it's former (slow)
glory! Of course it is still faster at blitting than an Ste with T28!

Technically correct, I suppose, but experience shows that people don't
look at .d groups before subscribing to binary groups. Posting the
charter will be the lesser of several evils, I think.

I can handle moderation - either manually or automatically. That's the
easy part. Getting the RFD accepted and passing the CFV is tough.

HS> filenames? No interest to me, nor any especial benefit AFAICS
HS> - a feature looking for a use ISTM.

While it's hard to imagine needing 126 processes, I bet any remaining programmers could do some fun things by using several processes per program - like, the WWW folks. Of course, that locks out anyone not using Magic, so probably not much will come of it.

However, support of long file names is _very_ important, IMHO. I use lots of CD-ROMS on my Falcon, & I was worried about not being able to use newer ones, once they have the long file names. If I understand right, Magic supports the Windows format, so I will have compatability yet?

Hi, Guy. :) I'm horribly changing the direction of this thread. Sorry. :)

Now, why would anybody bother to pay money for something that has the above disclaimer? This is something that has bothered me for a decade. (And I'm talking mostly about commerial software, which has basically the same disclaimer on it. You freeware & shareware guys don't bug me on this issue... :)

If I walk into a car dealer, & he offers to sell me a new car with no warrenty at all, I think the guy would be laughed out of work.

Why is software so different? All those 'tiny print' software licences I've read - I just want to laugh, and while I don't advocate piracy, I sure do feel like taking programs for free that are offering to sell me a disk full of nothing.

I'm sure I've worded this badly, and ticked some folks off. But, if the author themselves (again, _commercial_ software, any platform) have no faith or backbone to support the actions of their product, why in blazes should I bother paying them?

GM, Dodge, & Ford have thousands of recalls a year to upgrade defects. Howcome Microsoft, Corel, etc. can slap a higher version number on the fix, and charge for an 'upgrade'?

I guess I've always found those disclaimers (on commercial software!) to be a big insult to the user.

>I thought this program was to do with reclaiming fragged memory on 68000
>machines %^{|

I guess, that's wrong. There's a German hypertext which documents MagiC's new features (AES, GEMDOS, and configuration) and it also contains a description for addmem:

[translation on]
Addmem corresponds with foldr100 which is needed under TOS and which provides the system with more memory for internal data management.

Installation of this program is not required unless you get messages like 'Out of internal memory').
[translation off]

If placing addmem in the auto folder doesn't help then putting it in there more than once (with different names of course) could solve the problem.

>I have no problems like this (apart from speed) with Magic in pre-
>emptive m/s mode. Not a single online crash yet...

Actually, I didn't have crashes with the pre-emptive m/s being turned on, but CAB (or STiK) stopped receiving date quite often then. After I disabled pre-emptive m/s those problems were gone.

Well, I bought Flash II (Missionware Software .. available from Toad Computers and EVERY OTHER ATARI DEALER .. cost is about $40) and am using it right now in VT100 emulation mode. I have used it to access mainframes as well as here on delphi (and by extension on the internet). The only trick is having to figure out some of the key combos that do RESET, the PF keys, etc. If you need that info, I can post it for Flash II.

Most other ST telecommunications programs also have VT100 emulation. If you haven't found one, I suggest you simply haven't looked very hard yet. Still, if you need a suggestion, then Flash II is what I suggest.

On, On , I'm not on anything !

BTW ASS has been found not to work so some new software is now available.
The new software : Analytical Resequencing String Enhancer, is now
available, easy to register, you get your own version.
So stick your ARSE in the disc drive and load up, if any one wants to
borrow your copy of the software tell them, To get their own copy
instead of using your ARSE.

more info about the Virus itself to be released tommorow!

Ade.

I've just found another *great* image for your viewing pleasure :-).
See
http://www.esc.de/digifoto/diverse/glasses.jpeg

This was justed posted in the 'comp.graphics.rendering.raytracing'
newsgroup, and is really impressive.
Beware, it's a 1280*960 pic, though it's only 100 KBytes in size,
really amazing!
This is also a nice example for the HighColor render effect
(background!).
Using 1stGuide you should have no problem to view the picture
on a 4MB Falcon in a 256 color mode (with a 960*720 or so
ScreenBlaster mode, for instance) :-).

Regards,

Hi,

Having lost touch with Atari events for a while, I'm now trying to find out if the long-awaited new version of Papyrus is available or not. Also, who is the current dealer for Papyrus in the UK?

I'd appreciate any help.

Cheers,

Daniel

910. Re: JAZ drive?

Newsgroup: comp.sys.atari.st
Date: 1996-07-18 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.com>
Message-ID: <31EDDBDF.C6DC9D8@gatwick.geoquest.slb.com>
Source record: 141694

Hi Ludo,

I am using a Jaz as my principal hard disk now.
My computer is Atari Falcon (TOS 4.04)
I have the portable Jaz drive (i.e. external)
I am using ICD Pro 6.5.5 software.
I have partitioned to 128mB partitions.

I didn't get the ICD Zip tools beta to work... so I am using nothing special over the ICD software.
Without it I understand I cannot reformat the 'Jaz Tools' disk the drive comes with. This disk is a dual
format Mac/PC disk. The idea is a PC owner runs the software from floppy to erase the Mac part of this
disk and install it for his PC (or vice versa).
Either way I am happy to keep this disk for the future - I bought
some spare disk. Watch out - the cheaper ones are not 1GB.
[It's likely that with sufficient knowledge the 'Jaz Tools' disk _could_ be reformatted using ICD PROs
SCSITOOL.PRG. I vaguely remember something from the Iomega web site about sending an 04H?? command to do
it.]

It seems to be pretty fast (possibly not quite as fast as my Quantum Lightning was - but the main speed
limitation is the Atari, not the Jaz). It chatters a bit when actually reading/writing but is very quiet
otherwise.

I don't think there is any problem swapping disks provided you use ADSCSI.CPX to relog/einloggen the
scsi devices when you do so - and if your CPXs are loaded from the disk you are changing then you
need to configure the ADSCSI.CPX as memory resident first!

The only problem I encountered is probably not Jaz related.
When I filled up a partition I had a problem in that the last 2 clusters were not recognized by Diamond
Edge - it reported FAT errors for files which continued into them and wanted to truncate the files.
ICD Cleanup and Zorg thought the FATs were fine.
I think Everest was correctly reading the files - apparently proving that data really existed in the last
2 clusters - however I did get corruption problems and it isn't totally clear that Edge is at fault.
The solution was to clear some space and ensure that my BBS files weren't near the end of

the partition
(as they kept growing on from the position they were at).

> Any thoughts?

I have a proposal all written up. It was already shot down in flames
after being submitted to the group mentors, but I am more than willing
to let someone else have the text to modify as they see fit.

Getting 100 votes is the toughest part - but I think it's likely to be a
lot easier now than it was before I brought the subject up in the entire
comp.sys.atari.* tree. I suggest a "straw" vote - who wants to be the
vote-taker? We will probably want to take a straw vote on each of the
following points:

Should comp.binaries.atari (all systems) be created?
Should comp.binaries.atari (all systems) be moderated?
Should comp.binaries.atari.8bit be created?
Should comp.binaries.atari.8bit be moderated?
Should comp.binaries.atari.st be created?
Should comp.binaries.atari.st be moderated?

I suggest that, if we can find a vote-taker, and if we can garner 100 or
more votes in favor of any of the above "straw" proposals, that we then
submit the formal RFD and try for the group. I'd also recommend a .d
group (discussion) be part of the proposal for each binary group
desired, so as to keep binaries and discussion seperated (in
consideration of those who'd like to discuss the matter but don't have
selective download ability).

> upgradeable? Can someone please give me some help/instruction?

One of the breakthroughs of the STe is easy RAM upgrades, by simply popping in bigger SIMMs. The STf can be upgraded to 2.5 or 4Megs, but it requires an additional daughterboard, is expensive, and not a task for novices. My advice; RAM your STe up to 4 megs, and use the 1040 for other tasks. There is a LOT of things a 1040 will do quite nicely, and you're way ahead to have two machines (multitasking plus). Besides, some programs won't run on newer TOS, and your STf probably has TOS 1.0

> Is there any way to move a window with out moving the outline?

Yep - install WinX... A very nice piece of software - it makes using the
AES soooo much friendlier. It's very useable, even on a standard Falcon.
The only thing is it won't work with Magic, but I think there's a program
called Window Commander that does a similar job for that....

ANd WinX does soooo much more that just solid drags.... :)

920. Looking for opinions: ST with Epson Color Stylus II

Newsgroup: comp.sys.atari.st
Date: 1996-07-18 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <31EE4E59.6C3A@facstaff.wisc.edu>
Source record: 141704

Friends,
Does anyone use an Epson Color Stylus II inkjet with their ST?
Having seen posts about difficulties in getting recent HP & Canon inkjets
to work properly with anything other than Windoze systems, I am wondering
whether the same can be expected from Epson. Does the Stylus II emulate
earlier Epson standards (FX, MX, etc.) for which drivers for GDOS and
other ST software are readily available? Inquiring minds want to
know...especially since prices on this model seem exceptionally
reasonable right now!

Source record: 141705

f> Do I need to get a printer driver for an HP500 printer, if I plan
f> to hook one up to my 1040STf to print files?
Individual progs should have suitable printer drivers, most Laserjet drivers will work too. There are also GDOS printer drivers and fonts if the progs you want to use employ GDOS printing technology.

Apart from that, plain text printing from the desktop will print in Typewriter (Courier) font without problem, if you want to use the Alt-Help screendump then you will need a small prog to go in the Auto folder of your boot disk.

Regards, Derryck

Oddly enough, Windows95 seems to have little trouble reading my old ST
disks. Some of these disks I believed ruined due to output from various
ST disk utils for DOS.

In 1995, M$ finally decided to use extended floppy formats...

Just one of those slights. I am sure Rich will get over it. If Jabba ever
learns to format properly, errors like this would be avoided..

On the ST, if you drag a window...the actual window itself stays put and
you move a rectangle called the 'ghost image' around. On 8-16Hz
machines, it makes since so you don't redraw the window everytime you
move it to a different location with your mouse.

I've seen some systems actually move the entire window, no ghost images,
around in real time. Thing is you really need a good and fast graphics
redisplay. Hope this helps...

Almost the same overhere. I can log on but if I try (the only thing
that seems to do something) I get immediately a bunch of "General
Error : TCP: Bad Checksum" warnings.
BTW: I have a PPP connection. Two friends of mine also with PPP but
with other service providers have the same problems.

Infact, while Petey-boy was attempting to slam Rich, he was doing it with
text _I_ wrote...

Petey-boy implied that my 'expertise' with 'cutting edges' was an indication of
participating in 'Santanic rituals'. To which my natural response was to imply
that his 'lack of expertise' with 'cutting edges' was an indication that Petey-boy
is not yet weaned.

Although, honestly, JEDI has taken part in a 'Santanic ritual': JEDI
saw Living Colour play at Mershon Auditorium.

Gary Noack <gary@imco.demon.co.uk> writes:

>for that one. Is there a patch to cure the 114 files in a folder bug? Is it

That problem only occurs on the ROOT directory (and I believe that number or something close to it occurs only on floppy disks .. on hard drives, the number is (I believe) about twice that). It is not exactly a bug, but a physical limitaion of the number of sectors allocated to the directory in a ROOT folder. The directory for a subdirectory is unlimited because it is a file, not a preset number of sectors. So just put a few files (and subdirectories) in the root directory and you're safe. But in the subdirectories, you can cram as many files as you have disk space and you're safe too.

Atari Days
Announcing the 3rd Edition of the italian Atari Fair

TORINO - 16th july 1996
Emmesoft, the most important italian source for Atari products (located in Torino-ITALY), announces the third edition of the italian Fair for the Atari market, called Atari Days.
This Fair, which has been held for the very first time in December 1994, takes as example similar events periodically held in Germany, France, England, Sweden and USA; Atari Days is the right place to show and demonstrate all latest products and releases for Atari and Atari compatible computers.
The first two editions have had a good success, while this new edition will benefit of all suggestions from distributors and developers to improve Atari Days.

Atari Days - General Information

Where & when
Atari Days will be held in Torino (ITALIA) from Saturday 16th to Monday 18th November 1996; the most important innovation from the last edition is the number of opening days, three insted of two, to grant wider access to the people.
The selected site is the same of the previous edition: the central Hotel Holiday Inn (Via Assietta 3, in front of Porta Nuova's railstation).
The entrance will be ticket regulated (opening hours 10-18) while distributors and dealers pre-registered will get free entrance to the Fair.

First Edition of the Musical Contest
"MUSICA CON ATARI"
Since Atari computers are still strongly used in the musical field, during Atari Days there will be the Musical Contest "Musica con Atari", with over 3 millions Lit. (2.000 $) of prizes.
This Musical Contest is reserved to every musician (even outside Italy), hobbyst or professional.
"Musica con Atari" is sponsored by the most important companies in the Atari market. Between them are:

Charlie Lab
Steinberg
Emagic
C-LAB

Between the prizes awarded are a MIDI Digitar Midi-guitar, software Cubase Audio, Notator Logic sequencer.

For more detailed information and/or to receive the announcement of competition in English (the deadline to send the floppy disks with MIDIFile in General MIDI standard is 31th October 1996) please contact:
Manuela Esterni - phone +39 337 226379 fax +39 11 4374311
e-mail: atarimag@mbox.vol.it

The awarding of prizes of the musicians winners of "Musica con Atari" will be during Atari Days. N.B.: International winners are not obliged to be phisically present during the awarding of prizes.

Reserved AREAS FOR EXHIBITORS
In Atari Days people will find booths for demonstrations of new products and latest releases.
The major distributors and developers in the italian Atari market, together with distributors and international developers, the italian magazine "Atari Magazine" and the french magazine ST MAG will exhibit during the Fair.

Reserved AREAS FOR WORKSHOPS
During Atari Days ther will be Workshops about graphics, MIDI, Multimedia,MIDI etc...

What's new during Atari Days *
Falcon MK-X from C-LAB, the new rack mounted model, based upon licensed Falcon030 technology from Atari Corp.
Falcon Studio II, the all-new Falcon based digital audio workstation
Hades the new version from the Medusa family, with Motorola 68040 processor , 8 Mb RAM and 1.2 Gb Hd
Lithos scan: professional software for Agfa scanners with "direct to disk scanning"
Karaoke Voice Wizard: the latest release from Jurgen Schwietering (of Steinberg fame) of the most powerful Karaoke software for Atari
Notator Logic 2.5: the long awaited upgrade of one of the most famous MIDI sequencer in the world
Yamaha CD Audio Mastering : professional system for mastering Audio CD with Falcon e Cubase Audio
Afterburner, 68040 accelerator board for Falcon
MagiC 5: the latest release of the multitasking OS for Falcon
MagiC Mac e NVDI Mac: Atari emulator for Mac
Gemulator Gold e Laptop: Atari emulator for Windows 95 and for notebook PCs
Background Photos 2: the new all-italian professional textures CD ROM, volume 2

SNEAK PREVIEWS DURING Atari Days
Internet linking with Atari Magazine. Visitors will be able to "chat" with the most important developers from USA Germany, France and England
News on line ON-line newsreading, with the writers from "Atari Magazine", of the latest news for Atari
World Wide Web exploring, net-surfing of the Atari world on the WEB
Atari Club, meeting with the local Atari users' groups

Why should I attend/visit Atari Days ?
+It's the only one Fair of its kind in Italy!!

For more information:
Atari Days
Manuela Esterni Tel. +39 337 226379 FAX +39 11 4374311

940. ### Antmail 078, Falcon030 Problem

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: awood@f030.demon.co.uk
Message-ID: <837786466snz@f030.demon.co.uk>
Source record: 141559
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Your help would me much appreciated!

Im using Antmail 0.7.8 on a Falcon under single-tasking TOS 4.4 with
STiK 1.08.

99 per cent of the time that I try to access my POP3 account at
mail.netlink.co.uk with my user name and password correctly entered
along with the pop3 & smtp server as given by netlink, and with all
the settings saved in default.set in a mail folder - I get the
connecting to mail host message, followed by sending user name then sending
password, followed by a dialogue complaining that there is a problem with
the password. This is followed by a dialogue saying unable to connect to
mailhost then the connection is closed.

Also, out of the many times I've tried to check, a few times when I have got
through (and I'd like to know how I managed to!) I check the mail, find I've
got a message - then I try to collect it - then it hangs with around 20 bytes
to go (that was on 476b of a 496byte message). So consequently I had to
reboot the machine.

If anyone has any suggestions how to proceed, please let me know.
If this has already been covered recently, can someone give me thread title
and I'll try and find the info via 'dejanews'.

Regards,
Andrew

941. ### NOS_POP3, Falcon030 Help!

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: awood@f030.demon.co.uk
Message-ID: <837786880snz@f030.demon.co.uk>
Source record: 141560
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Having downloaded the POP3 version of NOS from Umich, I'm left a little
in the dark as there wasn't any information on what extra settings need
to be added in any of the files that accompany the NOS.TTP programs.

I've seen the lines :

```
pop mailbox <username>
pop mailhost <host name> 3
pop userdata <username> <password>
pop quiet off
pop timer 300
```

added to someone's STARTUP.NOS, and the recommendation to put the line

```
pop mailhost <hostname> 3
```

on a function key, followed by

```
pop kick
```

which I have tried, but this doesn't seem to do much! Do I have to add or
change any directories or other files to operate POP3? What should I do to
find out whether any mail is waiting on a POP3 account? What should I
see on screen to let me know how things are going?

Your answers to the above, and any help, would be most appreciated.

Regards,
Andrew

It'll probably run 70-90% of the speed of the speed of a real ST overall.
Take a look at http://www.users.fast.net/~smol/stonx.html
I have benchmark results from several ST benchmark programs there, running
under STonX. I'm pretty sure that there was a DX2-66

Message-ID: <31EF2EE7.240B@koptss03.delcoelect.com>
Source record: 141563

I'll attempt to help, but I need to get home first.

I use Notator and SMPTE with a Tascam 488 recorder.

The bursts of MIDI messages are a problem that I have faced for a couple of years. Even the Electronic Musician article written about Notator mentioned the same problem, so it is in the software. The bursts can be avoided if you give Notator about five seconds to 'settle' just after you double hit the stop key (returning the sequence to the beginning) or when you start the tape too soon after stopping the sequence. It seems to loose it's mind when you hit that key and attemt to start the sequence again right away.

I never got the offline messages even though I have a Roland D-70. I'm not sure if I can be of any help there.

945. Upgrade to 38800 BPS

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4sobdf$gb8@sally.dma.org>
Source record: 141564

Hi! I just recently got the file that gives the description for upgrading the ST/STe serial port to handle upto 38800 bps. Are the parts easy to get anymore? I also downloaded HSMODEM 6 because someone said I needed that too to run the faster speeds. I am going to get a 28800 bps modem for my STe, what do I have to do in FZT_TERM to make it go that fast when I get everything operational.

Also, is there a cheaper way than Toad to upgrade my 720K internal drive to a 1.44MB drive? I can get the drives real cheap that isn't the problem, I just need the parts and the software to run it or would it be easier just to go through Toad (US). Any help would be appreciated and I would prefer a response via E-MAIL (richardw@dma.org) than posting here unless a lot of people want to know.

Richard Wegner - Dayton Microcomputer Association - richardw@dma.org

946. Replacing Falcon Ide Hd?

Newsgroup: comp.sys.atari.st

Hi,

I am planning to replace the Falcon internal 2.5' IDE hard disk with a IDE 3.5' HD. I have already found the 2.5-3.5 connector (in a Amiga repair service). I am wondering: I will have to use again an IDE mechanism (max 540 MB) or I can go for a E-IDE mechanism? Is there someone who can suggest me some already tested hard disk I can go for?

Thank you,

Lodovico Zanier

Make sure that you don't have a "MIDI Feedback Loop" Depending on your
setup, you may have to shut off MIDI thru on Notator so that you don't end
up absolutely confusing your sequencer and equipment. Any message sent
through the system (if connected in a thru-loop) will cause extremely
strange behavior. One easy way to test is to disconnect the MIDI input to
the computer and see if the malfunction ceases.

No, its not from ICD, but comes from Norbert Wieczorek in Germany.
(http://members.aol.com/norwiecz/index.html)

The LINK96 is the only host adapter that on the ST can handle drives
like the Quantum
Fireball which require the computer to have its own SCSI ID.

: provided the executable because I cannot as yet find the source code.

: You can find it at http://www.csee.usf.edu/~millert in the computers
: section.

It might be a good idea to add a formal PD release note to the archive
so that no one will be confused by the "registered users only" part
of the newto191 file, especially when users get it from a source
other than you web page.

```
- Atari 520ST with EasieST ram expansion
- SF314 disk drive
= power supplies for the above two items
- mystery no-name 5.25" drive
- cables for the components

One problem with it, after formatting disks, it refuses to
acknowledge the drive's presence (when going through it's end of
format procedures) Other than that, all appears to work fine as
best as I can tell (I know nothing about the ST, picked this up
cheap but was never able to find software or anyone helpful locally).

960. ### CAB 1.3, Domain resolving problem

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: awood@f030.demon.co.uk
Message-ID: <837787324snz@f030.demon.co.uk>
Source record: 141781
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

I'm using STiK 1.08 with CAB 1.3 and the latest CAB.OVL from WWW131.ZIP on a Falcon030 under single-TOS 4.4.

I have an account in the UK with Demon, and I'm using their DNS at 158.152.1.43.

The problem is that some pages refuse to resolve with CAB, yet with Finger running under STiK in the same session, I've had no problems.

A case in point is the Channel 4 site at http://www.channel4.com. I used Finger to get the IP address to use in CAB as CAB itself couldn't get it.

In the past, I've even used NOS to finger sites to get the IP address because CAB can't resolve the hosts (or should that be STiK?).

I _AM_ using the same DNS in both STiK and NOS.

Any thoughts or suggestions would be most appreciated.

Regards,
Andrew

Source record: 141785

Hello everybody

My question is surely a dumb one, but I try anywayï¿½
I own a atari 1040 stf for perhaps 6 years and have been using it
exclusively for music playing, with my MIDI synthesizer
Now I need more memory to be able to run 3 or 4 programs at the same
time (namely: a sequencer, a sound editor, and two educationnal
software)
To do this, i will use steinberg "switcher", which allow to part the
memory between several applications
My question is:
Is it possible to add any memory to the 1040 STF, and if yes, what
kind of memory should i be looking for ?

Thank you very much for any help

I have successfully added SIMMS to my 1040stf. It is a job for one adept =

at soldering and wiring. As I understand it, there are more recent =

versions of the Atari that have SIMM sockets build in. Mine did not.

If you want more info on this, e-mail to me. I have detailed written =

instructions that were given to me by another successful upgrader.

iwb@cix.compulink.co.uk ("Ian Braby") writes:
> This may be too simplistic but... has the drive been formatted? Remember,
> HDdriver is only good for partitioning and you need AHDI (for example) to
> actually _format_ the drive first!
No. All modern drives (which the one mentioned in the original posting is)
are already formatted so you only have to partition them. So HDDriver (or
any other modern harddisk driver which comes with partitioning software) is
all you need if you want to install a new drive. Formatting is obsolete and
only needed in rare cases when you experience serious trouble with a drive.

Uwe Seimet has already posted what could be the reason and a possible
solution.

Ciao

Thomas

>

What are we talking about here?? "Checksum Errors" or "Bad Packets"
I've only gotten the "Checksum Error" a few times (I have a Falcon with
hsmoda06 installed). BUT, I get "PPP:Bad Packet" about a million times
per session, throughput sucks, and I have yet to finish an FTP or a News
session without ICE bombing or locking up partway through.

Might hsmoda07 fix my "Bad Packet" problem?

Or am I completely confused? (If so, please set me straight.)

thanks

>could give me some advice. i want to upgrade the memory
>on my atari 1040STE... can i use standard pc simms
>i wonder? what speed/parity/size simms should i get?

You can use 256K or 1K SIMMS, either with parity or without parity (ie either 8chip or 9 chip SIMMS). The STe ignores the parity chip. I have 70ns SIMMS in my computer and that is plenty fast .. anything less than 100ns should be ok. You need to add 2 SIMMS of the same size so you can put in 2 256K or 2 1 meg SIMMS, or 4 256K or 4 1 meg, or 2 256K and 2 1 meg SIMMS (the only restriction is they be added in groups of 2 of the same size, and the most SIMMS that can be put in is 4 SIMMS).

976. New Program

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <837887116_OASIS_@phil4.demon.co.uk>
Source record: 141797

I'm just finishing up on a new program.... Purge(NOS/Oasis), a program designed to work with NOS 0.42 and Oasis 1.35, to filter out news from usenet news. The can either be run from the desktop, or can be sandwiched betweem Oasis and NOS (and then it is called automatically), and will filter wither NOS's BATCH.TXT output, or OASIS's indexed news files.

The filtering is simply looking for words or phrases you specify in a kill file, and any articles containing such words or phrases are killed (or optionally, articles _not_ cantaining the phrases are killed).

The program was written to help with the short commings of NOS 0.42 (ie. it crashes if a kill file exists).

The program is Freeware, and available for anyone.

If you are interested and want a copy, email me and I'll send copies out, as soon as the bug/beta testing is complete (probably next weekend).

The program will also evetually be available from most Atari related FTP sites, eg. Umich, Demon, Cnam etc. However this will be after any copies are sent out via email.

ATb.

: Has AES 4.1 been released then? I knew it was `available' from some
: ftp-site, but has it now been included in the MDK? Is this legal?

I suspect it's somewhat of a grey area. I don't think it was ever
officially released, but the fact is, it _is_ out there, and no one's
doing anything about it. Depending on how sticky one wants to be about
legality, then, it would seem to be de facto, if not de jure, freely
available.

In a message of <Thu 18 Jul 96 22:28>, Andy Bowd (2:281/202.0) writes:

Hello Andy,

AB> Can anybody advise me on how well STonx will run on my
AB> 486DX2/66 PC. I've got the program to blow the roms from my
AB> 1040STFM to disk for the emulator, but is it worth it?!

I've got it running on a 486DX4-100 PC (Linux), but it is very, very
slooooooooowwwww. Maybe with a Pentium 150-200 it will be worth the
effort. Maybe you should try the Magic-PC demo (runs on Win95 only),
which is faster, but still doesn't match the speed of a real ST.

Greetings, Luc

981. files compressed by afx???

Newsgroup: comp.sys.atari.st
Date: 1996-07-19 00:00:00 UTC
From: H.WISCHNAT@LINK-SR.cl.sub.de
Message-ID: <6DBZhbmbcpB@sr-hw.link-sr.cl.sub.de>
Source record: 141802

Hello,

some time ago I used an online compressing program on my Atari
1040STF, which created in each directory with compressed
files a file named FILESIZE.AFX. The compressing program was
transparent for the applications.

Now I don't have this program anymore, I don't remenber it's
name (AFX??), but I'd like to have my files back again
uncompressed.

Does anybody know this program and can help me find it, so
that I am able to recover the files? It was free- or
shareware.

A email would be fine, because I don't read this english
newsgroup regularly.

cu, Hartmut.

The best thing would probably be to get HD Driver working and all that
springs to mind is to use the configuration program to make sure that
the buttons for the Jaz's ID are switched on and that you have a cart
in on bootup, the authour hangs out here a fair bit so ask him if this
doesn't work.

989. CAB and Jpeg's - still a problem

Newsgroup: comp.sys.atari.st
Date: 1996-07-20 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <87680231_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 141510

Has anyone else noticed that CAB still seems to get stuck on some jpegs?
This is CAB from WWW131.ZIP (it's better than previous versions but still
seems to hang).

Also, what about putting support for JPEGD into the jpeg overlay? So the
decoding of jpegs will be a lot faster on a Falcon. Please. :-)

Gary.

Of course it's easier to use an ANSI bitmapped font installed as the system
font with NVDIGDOS. Try MYBLUE (which comes with LED) or MSBANSI2.ZIP

994. MegaST touch screen??

Newsgroup: comp.sys.atari.st
Date: 1996-07-20 00:00:00 UTC
From: Callum.Lerwick@flight.org
Message-ID: <442_9607210131@flight.org>
Source record: 141515

I just bought a MegaST2 that has a touch screen controller in it. It came with a badge labeled "KEY POS/<some phone numbers>/Division of Keystone Cash Register". Is anyone familiar with these things? It has a large circuit board inside, with three wires soldered to the MIDI ACIA as its only connection to the motherboard. On the card is two DB-25 ports, one male and one female. Added to the back of the CPU box is a female DB-9 port and a female DIN-5. (probably the power plug for the interface) Is this thing of any use as an A/D converter? Or should I just rip it out and reconnect the MIDI ports?

Sorry, Both the Univ network and my computer (a VAX at my lab)
seem to have some problems.
I MAY have fixed the problem in the VAX. At least, I can mail from
inside our network to it now. Something in smtp itself is clobbering
my disk headers.
Please try again?

From: kwd9152@is4.nyu.edu
Message-ID: <4spinl$g0i@news.nyu.edu>
Source record: 141577

I have an old MegaST which I just lent to a friend. Now she's interested in playing the old games and watching the cool demos... Unfortunately, I only have a Mono (SM124) monitor on it.

Is the only way to get composite video from the computer by finding an old Video Key? Are they available from anywhere at this point?

OR...

Should I try to find a used SC1224 for a low price...? How much should they go for anyway?

Well, if you have any hints or suggestions, please drop me a note...

Thanks.

adept > at soldering and wiring.

On the other hand.....

I THOUGHT I was adept at soldering until I tried this upgrade to a
520STFM. Made a complete Horlicks of it, as we say around here. It's
sooo fiddly to do. The extra memory never worked reliably, even after
I'd swallowed my pride and took it to a professional repairers.
Luckily for me I didn't ruin the basic m/c - just threw away money on
upgrade and attempted repair. (Don't let that put you off, of course <g>)

A while ago I seem to remember someone posting here saying how to get CAB to perform authentication. Something about putting your user and password at then end of the URL.

Does anyone know exactly what you need to do to achieve this? Is this correct and if so what's the format of user/password?

Thanks, Gary.

I remember trying this out ages ago. It only worked in mono(?) and was
limited in it's abilities. I don't think it was fully RIP compatible.

I forget where I got it from, probably Umich. I think it was called ripterm.?

Regards, Julian

I think the reason is mostly found with shareware and freeware
authors. If I add this line or one similar to my program, I am
removed from blame if it goes wrong.

As I'm not a professional software author, and don't have insurance
against people sueing me, and don't have much moeny at all, I would
like some way to protect me from people sueing me over my buggy
software.

The above waranty would basically say to the user: use it at your own
risk.

>
>I'm sure I've worded this badly, and ticked some folks off. But, if the author

>themselves (again, _commercial_ software, any platform) have no faith or
>backbone to support the actions of their product, why in blazes should I bother
>paying them?

You shouldn't, but then some commercial companies would claim that
their software is so complex that there is no way that they could find
the bugs and fix them all.

>
>GM, Dodge, & Ford have thousands of recalls a year to upgrade defects. Howcome
>Microsoft, Corel, etc. can slap a higher version number on the fix, and charge
>for an 'upgrade'?

I'd love the same for my TOS 2.05 which has some really nasty bugs.
Its just the way the industry is, and if people keep buying the
software then noone is going to change their approach.

>
>I guess I've always found those disclaimers (on commercial software!) to be a
>big insult to the user.

Don't take them as an insult. I should think its just a protection
fro them, so they can't lose mega-bucks when someone's harddisk is
wiped because they had a bug in their software. Besides... its
probably their lawyers that asked them to put it there ! :)

ATb.

Thanks jOHN, fogot about that, for those who still need help you'll
need to run the following prog too.

Backwards Resequencing Enhancer And String Tester.
This programme will take a lot of getting used to as test string to
see if ok, you will need to have a good grope around BREAST for the
best effects.

1020. HP LaserJet 5L Drivers?

Newsgroup: comp.sys.atari.st
Date: 1996-07-20 00:00:00 UTC
From: fl@zap.io.org
Message-ID: <4srg1q$mcr@zap.io.org>
Source record: 141593

Having recently purchased an HP LaserJet 5L printer, I'm going through the joys of finding and configuring the various printer drivers I will need. I was wondering whether anyone else has gone through this and has found or modified some drivers.

Currently I am running SpeedoGdos v. 5.0c, although I am expecting a copy of NVDI 4 from Toad shortly. I am using a driver called LJ_MF.SYS which seems to only give me a maximum of 300 dpi. Also, it leaves a small half circle (sorta like a little smile) in the upper lefthand corner of each printed page. Has anyone found a way to upgrade this to 600 dpi and to get rid of the extraneous character? Has anyone made a driver for the 5L using the NVDI printer configuration utility?

In Calamus, I seem to have a collection of HP LaserJet 4 drivers, the most recent being HPLJIVMV.CDT which seems to print alright at 600 dpi, but sometimes it prints text with the letters as fuzzy dots in the top half of the page only (this is for an all-text document). Could some Calamus user out there with an HP 5L point me in the right direction for the right driver to use? Or has anyone used PRINTGEN to make a Calamus driver for the 5L?

Lastly, is there any way that I can print out from LDW Power, a spreadsheet program, without having to re-boot and load the old GDOS and a separate ASSIGN.SYS file. This is a real drag and it sure would be nice to be able to print out the charts and graphs from LDW with Speedo or NVDI.

Thanks in advance to any and all who can help me out.

>(And I'm talking mostly about commerial software, which has basically
>the same disclaimer on it. You freeware & shareware guys don't bug me
>on this issue... :)

I suppose you can look at this from a few perspectives. Your point of
view is no less valid than mine.

>If I walk into a car dealer, & he offers to sell me a new car with no
>warrenty at all, I think the guy would be laughed out of work.

On the other hand, if you were a good mechanic you might prefer the no
warranty option - you'd get the car at a knockdown price. I dunno
about the US but here in the UK, if you buy a car privately you have
no comeback on the seller, even if they blatently lie to you.

You could bring in a law where the buyer does have some comeback on
the seller - but what if the seller has no idea how a car works? He'd
have to purchase some kind of insurance in case he ended up in court.
Equally, the seller may be perfectly at ease with all things
mechanical but be selling to someone who knows nothing - the seller
would be unable to make the buyer understand what it was he was trying
to explain - insurance needed again.

>Why is software so different? All those 'tiny print' software licences
>I've read - I just want to laugh, and while I don't advocate piracy, I
>sure do feel like taking programs for free that are offering to sell

>me a disk full of nothing.

I think the above covers non commercial stuff. To implement a proper warranty for commercial software could require a competent legal system to back it up, imagine the expense which would be involved to train enough lawyers and judges in all the different software and systems currently available - never mind how fast everything changes.

On the practical side, look at NASA - it's taken them years to get a resonably reliable system working. It's far from perfect because if it was, there'd be no need for all the backup systems they use. It would probably be quite easy to train any flight crew to fly a working shuttle, the skill comes from the crew being able to deal with a constant stream of failures during the course of a mission.

I can't really remember, but wasn't it a missing semi-colon in software which caused the loss of a voyager probe? Translate this into buggy word processor sales and compensation claims - it would only take one court case to find in favour of one buyer and all other claims would be upheld by default.

>I'm sure I've worded this badly, and ticked some folks off. But, if
>the author themselves (again, _commercial_ software, any platform)
>have no faith or backbone to support the actions of their product, why
>in blazes should I bother paying them?

If enough testing were done then you could have a proper warranty but either the price would go through the roof, or advances in software would stagnate, no doubt both. Imo, it's too high a price to pay.

>GM, Dodge, & Ford have thousands of recalls a year to upgrade defects.
>Howcome Microsoft, Corel, etc. can slap a higher version number on the
>fix, and charge for an 'upgrade'?

There you do have a very valid point. With every upgrade some bugs are fixed and naturally some new ones will exist. It leaves the customer wondering (rightly or wrongly) at times if this has not been done on purpose. A satisfactory solution would be for companies to release a free minor upgrade which only fixes the known bugs, and adds no new features.

True, car companies do have to recall cars to fix defects, but this is normally only on safety issues (at least in the UK). Here's a dilemma - who would be responsible for a software failure in a hospital life support machine?

From: gary@imco.demon.co.uk
Message-ID: <837984220_OASIS_@imco.demon.co.uk>
Source record: 141596

Hi,

I just tried setting up an internet connection with Mintnet. I used the TAF Mint - X windows - SLIP/PPP - Chimera - etc. package. I followed the setup instructions faithfully, got as far as setting up the MINIX partitions and unpacking all the files onto it. I set up the MINT.CNF file rebooted the system. Mint loaded along with it's device drivers and then bombed out when it came to executing xinit. I got a 'Server Error' followed by 11 bombs and some more cryptic messages. I fiddled about and got tsch to work as well as a few other things (but sadly not an editor). I've got hacked off with it now.

Somebody help me :-(

I'm using a 4Mb stfm with tos 1.2 and I've tried running Mint with and without HSmod07 installed. The hard disk partition I'm using for Minix is I:

What do I do now?????

Ta, Gaz.

I am sure I read somewhere that this is supposed to be a nono (one of those
RFC things) .. changing the Subject: field that is.

> Having Xrefs is great. Not having them is not a tragedy. I don't much
> care, and since it's virtually impossible to provide Xrefs on gated

that would depend on the gateway and news system at the other end , I dont
think it is impossible to do it . I am sure Net2Net was at least preserving
Xrefs although I doubt fido system is capable of using it without changes.

> few problems." Apparently, you relegate Boris (a PhD, IIRC) to the same
> group, since he's having problems compiling Kermit under /any/ available
> version of C, also.

Well I dont know exacly whether these problems are surmountable or not but I really see compiling source as only marginally harder than running install progs if you have the neccesary libs and includes , maybe a bit of carving to ber done to the Makefiles or c/h files sometimes. Being fair though mint is probably substantially harder than Linux but all the required stuff is available either in binary or with diffed sources so you dont even have to bother with that and then it IS like running an install prg.

> Perhaps you're correct. I should get off the Internet, stop gating
> email and news to Atarinet, stop writing software to do such, in fact,
> since I am so clueless, I should quit my job in Intel's network software
> lab and go sweep out stables instead.

not if they are paying you $90 per hour as a proof reader I wouldn't :-))

However the fact that you are doing above makes me think you are kidding us here about your problems with mint(net). I cannot beleive someone who is so experienced in matters can be having problems with mint from my point of view (and I have to say again on basis of above a much less computer literate POV to yourself) mint is not some boffin only thing that is beyond the level of ordinary plug-play users and I hold up myself as evidence of that !! I would say no harder to set up than say a Fidonet point system or BBS.

Lloyd Larson <lwlarson@cs.byu.edu> wrote:

: If you can't find an Atari drive to replace it with, you can replace the drive
: mechanism with an IBM compatible 720k mechanism. You may have to carve the
: plastic on the front of the drive to allow for a different eject button, etc.

Yes and no. Current PC drives no longer have finger-moveable jumpers, and
come set up for Drive B use, as in PC use.

The jumper is now a zero-ohm surface mount resistor on the other side of
the board. As delivered, that tiny little black lump is next to the
markings DS1. It needs to be moved, using tools appropriate for surface
mount repair work, so it is next to DS0, which is Drive A.

If you know how, do it. Or, either get your new drive from a place that
does repair work, and will move it for you, or from an Atari dealer, who
will already have it moved.

>What should I do to find out whether any mail is waiting on a POP3 account?

Use "telnet <hostname> 110" to call up your POP server. Log in with "USER
<username>" and "PASS <password>". The server should then tell you how many
messages are in your mailbox, and the total size in bytes. At this point
you could actually read your messages, but I don't remember the appropriate
commands. "QUIT" will log you off.

>per session, throughput sucks, and I have yet to finish an FTP or a News
>session without ICE bombing or locking up partway through.
>Might hsmoda07 fix my "Bad Packet" problem?

There are three ways of eliminating the problem with the current
versions:

- Reducing my speed between the Falcon and the modem to 57600 instead
of 115200.
- Installing HSMODA07.
- Using SLIP instead of PPP.

Of course you also need the latest ICE which will be released shortly.

A black and white mag that costs $48 for six issues is pretty steep isn't it?
We in the Mac/PC world pay around $20 for 12 issues with full color 200+ pages covering
from
digital video, multimedia, education, games, desktop publishing and the net.
Calamus SL is more catchup than leading edge.

I suppose ST users are use to pay more for less.

andrew@ajrose.demon.co.uk barked in COMP.SYS.ATARI.ST on 21 Jul 96:

a> 1 - Is it a reality yet?

I believe it is, but only in German.

a> 2 - System requirements?

Win95 or WinNT (I haven't tried it with Win3.x and Win32s, so I can't recommedn that), 8 megs RAM minimum (16 highly recommended), as many megs free on the HDD as you wish to dedicate to Atari software plus about 6 megs, VGA or better display. Sound card recommended but not required.

a> 3 - Performance expectations on, say, 75meg Pentium?

Acceptable. I have been using the demo on a 133 and it's quite nice.

a> 4 - Limitations (I'm currently using Magic2 on my STe, and would expect
a> complete compatability with the software I currently use - is this
a> realistic?)

So far, I have found nothing that wouldn't run on it - I don't have a modem on the office machine, however.

a> I remember something about a demo being available. I don't have a PC
a> (yet) so can't try this out, but if anyone has, any reactions?

That's what I'm using. It expires 1 August, so if you want to try it, hurry! It's good enough that I plan to buy MagiC for my Mega STe.

a> And finally: If I were to buy a 75 MHz Pentium notebook with 8 mB Ram
a> and a 540 meg HD, and added MagiC-PC to it, am I looking at a flexible
a> system to run both PC and Atari software in a portable?

Yes, but 8 megs of RAM for Win95 is not going to be a good performer.

a> BTW, the STe STAYS!!!!!

Aw, gee, you wouldn't consider giving it to me? <G>

The kill file in POP3 does work, however the program as a whole seems
to be unstable compared to 0.42, is this my imagination ???

>
> b> All you need to do is create a text file named KILL in the spool\news

If you want to delete all trace of him, it would be better just to
put:

PETER SINCLAIR-DAY
sinclap2954

> b> You will still get the header so you will know if he has posted anything,
> b> but the body of the text will not be downloaded.
>

>
> b> I'm using the pop3 version of NOS and it works for me. :-)
>
>Likewise. My kill file is now 215 lines in length.

I'm not quiet that paranoid... and pop3 is too unstable... I'll stick
to my off-line purge program.

1047. £20 Setup Fee Waived

Newsgroup: comp.sys.atari.st
Date: 1996-07-21 00:00:00 UTC
From: dhend@zetnet.co.uk
Message-ID: <838036360_OASIS_@zetnet.co.uk>
Source record: 141527

First and last time I'm going to announce it in c.s.a.s,

Zetnet have agreed to waive the £20- setup fee for folks joining from other ISPs.

That makes them £7.50 a month, no setup and SLIP 0345 "lo-call" account.

Call 01595 696667 for more.

Yours etc.

David.

1048. Graphics cards - are they worth it?

Newsgroup: comp.sys.atari.st
Date: 1996-07-21 00:00:00 UTC
From: Dean Squires <dsquires@cancom.net>
Message-ID: <31F22455.1B32@cancom.net>
Source record: 141528

I was looking through Homa systems House home page

www2.magmacom.com/~nima/

and came across reference to the Nova Graphics card.
It says that it uses the Mach64 chipset, my question is then do you have to buy a SVGA monitor as well, or is my old color monitor good enough. I have a MSTe4.
If I can still use my monitor, what is the quality like when using such a small sceen size.

1049. Phillips CM833 MkII RGB Pinouts

Newsgroup: comp.sys.atari.st

Hi,

I have just purchased a Phillips CM833 MkII colour monitor from a chap
using an Amiga for use with a device that requires an RGB monitor.

I'm posting here as I'm guessing that there must be other Amiga/ST users
that have this monitor.

Can anyone lay their hands on the pinout schematic for the monitor
and email the details to me before I warm the soldering iron !!

It would be most appreciated.

1052. MagicPC - any info available?

Newsgroup: comp.sys.atari.st
Date: 1996-07-21 00:00:00 UTC
From: andrew@ajrose.demon.co.uk
Message-ID: <85141425_000013_OASIS_NEWS@ajrose.demon.co.uk>
Source record: 141532

There was a flurry of postings recently about the possibility of MagiC-PC becoming an imminent reality AFAIR.

At the time this was of little relevence to me, and I can't remember much about it, so can anyone fill me in on the details, such as:

1 - Is it a reality yet?

2 - System requirements?

3 - Performance expectations on, say, 75meg Pentium?

4 - Limitations (I'm currently using Magic2 on my STe, and would expect complete compatability with the software I currently use - is this realistic?)

I remember something about a demo being available. I don't have a PC (yet) so can't try this out, but if anyone has, any reactions?

And finally: If I were to buy a 75 MHz Pentium notebook with 8 mB Ram and a 540 meg HD, and added MagiC-PC to it, am I looking at a flexible system to run both PC and Atari software in a portable?

Lotsa questions - I'd love answers before spending too much cash!

Andrew

BTW, the STe STAYS!!!!!

1054. Atari ST for sale

Newsgroup: comp.sys.atari.st
Date: 1996-07-21 00:00:00 UTC
From: marks@cxo.mts.dec.com
Message-ID: <4sts7h$fgm@nntpd2.cxo.dec.com>
Source record: 141534

I have the following ATARI ST hardware and software for sale.
The computer worked when I shipped it to my Dad last year, but it didn't
run properly when he received it. He tried troubleshooting it,
but couldn't get it to run reliably. At this point I suspect the
system board, but he lives in Wisconsin, and I'm in Colorado. So I can't
diagnose it, but it sounds like a problem on the system board, since
it displays bombs when booting.

I'll sell everything below for $100 plus shipping, or individually as shown.

520ST (old style) with additional 512K memory kit $30 + shipping
Complete with mouse and user guides.
Currently does not run reliably, but could be something
as simple as re-seating chips, or maybe the power
supply is on the fritz.

ATARI SC1224 color monitor $80 + shipping
Includes original packing

(2) DSDD floppy disk drives w/ power supplies $25 ea. + ship.

ATARI ST software $20 + shipping
- spreadsheet (includes user guide)
- database program (includes user guide)
- PASCAL programming language (includes user guide)
- a bunch of miscellaneous software on floppies

I was at the newstand the other day and MacFormat was available in Cedar Falls, IA. I noticed it has grown with content and advertising. Lots of mailorder glossy add pages displaying the Mac and Newton in its glory. Last time I looked at STF which was a year ago, was more of a newsletter than a mag. With the Mac market increasing in the UK and MF growing, adding staff maybe needed..

>
> But barring Sinclap (wasn't that an STD at some point? Just curious),
> which mags are still out there? I know there's the disk/infomag

> any other glossies or newsprints around?

As far as I am aware whats available on this side of the Atlantic is ST Informer, ST Report(a more diverse product) and Current Notes. Not much left of course but I thought that would change considering the praises of the new ST clones. Anyone purchase one? By the way Apple will be shipping their new $3000 200 mhz Performa 6400 with integrated suround sound and subwoofer..

I have built the ISA adapter from Torsten LANG and now I have a nice ET4000
card in my MegaST4. Believe me, it is very pleasant to work on a 15" monitor
in 1024x768-256colors!!! It is a new life for my computer.
I don't think that your old monitor will have the required specs, you will
have to buy a SVGA monitor (the input bandwidth must be rather high [>80Mhz])

The idea behind this restriction is that you won't ever have an article which references another article with a different subject, because this could raise tricky threading issues. So the news-posting software should throw away the references if the user changes the subject line when following-up. Not allowing subject changes at all is a highly Usenet-unfriendly limitation.

There is still ST Informer, Current Notes, hundreds of BBS's, loads of User Groups, and our eight bit brethren with wide shoulders who went through this crap in 1988.

ST Format apparantly made a business decision. YOU can afford to make a decision in this matter without relying on the bottom line.

p>
p> The kill file in POP3 does work, however the program as a whole seems
p> to be unstable compared to 0.42, is this my imagination ???

I would say so, yes. Stability is not a problem on my MSTe, 4 megs, TOS 2.06, HSmodem .06, and ICD drivers. I use Modem2 at 115200 bps also.

>> A better one would be:
>>
>> From: **PETER SINCLAIR-DAY**
>> From: **sinclap2954**

I don't want to miss any posts from legitimate Atari users. However, in his honor, I added a feature to UUCP-ST (the program that's gating Internet to Fido-style messages here): the KillFrom command in the config will kill his posts even if they slip through my NOS killfile (which is possible, as I also have a "keep" line for all *atari* newsgroups). In spite of things I have seen quoted by others (he thinks he's getting through the kill file(s)), his posts never make it to me, or to any of the systems who get their nes through me.

p> I'm not quiet that paranoid... and pop3 is too unstable... I'll stick
p> to my off-line purge program.

Then you're not paranoid enough. <G> But an offline purge works, if it's all you can get working.

>>
>Sorry, but it is a problem of the CAB.OVL. The "MINTCAB.OVL" with MintNet and
>CAB works without any JPEG problems !

Unfortunately this is not true for me. I use cab.ovl for mintnet, but I can't load any jpeg (yes cabjpeg.ovl is in the cab-folder), cab simply skips them (for e.g. http://www.uni-stuttgart.de/RUSuser/picinfo/index.html, the headlines and the summary-pictures are not showed, but they are in the wwwcache-folder, GemView is able to show them)

BTW: Is 1.77 still the newest cab-for-mintnet.ovl Version ?

If you have set up your STARTUP.NOS file correctly you shoud be OK. I also found nothing in the way of instructions when I first downloaded POP3.NOS. In order to access the mail on your ISP's server you have to give the command 'pop kick'. It is possible to set this up from OASIS using a function key. If you can't get going mail me a copy of your STARTUP.NOS file and I'll try to help

without wanting to toot my own horn too much :), there's still CURRENT NOTES magazine, which has been going from strength to strength under its new ownership; the current issue (May/June) is 56 pages long and packed with info. It's the perfect way to innoculate yourselves against the spoutings of all-talk/know-nothings like SinClap. It's also a testament to the strengths of Calamus SL as a design medium, as the magazine is laid out with it. You can buy copies from Denesh Bhabuta through his shareware service, who gets shipped a quantity of them; we also offer a subscription service, with Europe rates being $48 US for one year (six issues). Inquiries may be sent out to:

CURRENT NOTES
46 SCOTIA AVENUE
SCARBOROUGH, ONTARIO
CANADA M1L 4E6

make out all money orders to CURRENT NOTES.

and check out our web page: http://www.io.org/~hcarson/cnpage.htm

Dan Dreibelbis, alt.info.everything editor, news, sometimes reviewer, CURRENT NOTES magazine.

I think this is a problem with 'Demon' :-(

I have just moved from Demon to Zetnet and have had no problems since :-)

I think Demon is just too busy :-(

Zetnet is £7.50 per month inc VAT, no extras to pay :-)

0345 pop so local rates anywhere in the UK :-)

If you transfer from anouther ISP they waive the £20 set up fee. all you
have to do is send them an email :-)

Zetnet 01595-696667 tell them Roy Goring sent you :-)

> a "key" file to unlock some of the more pwerful functions.

I have one of the latest commercial copies, V6.6 (got it in the last week of trading, unbeknown at the time). It has a registration mechanism built in unlike previous versions. There was also a demo disk for version 6.5 which I presume will become the shareware offering, getting the full version on registration, a guess not known fact.
>
> And in any case, would you rather see it upgraded under a shareware

Hello:

I have noticed that with some software packages, they supply you with
a custom Icon you can use to install on your desktop.
My question is.. How do you import these into the newdesk.rsc file.
I have tried ICDRAW.prg with no success. Is there another way??
All replies are greatly appreciated.

Why don't you try using RUFTRADE? It's a text translator. I don't know what version it's up to, but I thought it was quite good. It has a computer orientated dictionary so it should cope. I remember it being listed among a `Top Fifty' at HENSA. Worth a try?

Ali.

Which version of HDDRIVER do you use? I don't know of any version that
doesn't recognize JAZ drives. These drives are handled like any other
SCSI drive.
If possible, send me a detailed report by email. Use the current demo
version of HDDRIVER 5.2 for your tests.

Denebian) wrote:

>There is still ST Informer, Current Notes, hundreds of BBS's, loads of User

I have never seen either of the above magazines,and to be honest I
wouldn't know how to get one. I do not have a local BBS, and there are
no user groups in my area,
The last figures I heard where that only ten percent of ATARI
owners are on the Internet, I at least have that, but what about the
rest, they do not have accesss or probably havent even heard of your
above list, they will be wondering what next?

>Groups, and our eight bit brethren with wide shoulders who went through this
>crap in 1988.

I would hardley call it "crap", everyone has to agree that it is a
blow to the ATARI Community, however we will survive, thousands of
ATARI owners are not going to wake up monday morning and sell there
ST, :), but a hell of a lot of smaller pd libraries will fold, a lot
of firms will jump overboard, especially in countries that relied on
ST Format for there advertising,
>
>ST Format apparantly made a business decision. YOU can afford to make a
>decision in this matter without relying on the bottom line.

I doubt very much that ST Format made the decision, and anyone who
goes around blaming the ST Formay staff would have to have there head
in the sand, (not saying thats what you meant<G>)

ST PLUS :
Month 7, Issue 7, packed with news and reviews, this is a dedicated monthly production and can therefore be more up to date with news than most other publications, has other areas of interest in its content, but the largest part dedicated to ATARI,

MAGGIE:
This publication has been going years, originally had bad press but was taken over a couple of years ago by CHi and is now one of the most respected on the scene, the best read, with top names contributing, released around four times a year, issue 20 released this month,

STOSSER:
Three years and 26 issues (27th in progress), originally a STOS coders diskzine but expanded to cover a whole range of ATARI subjects, but largest content is for STOS

ATARIPHILE:
Bi monthly and currently at issue 2, this is the most polished and certainly the most impressive first issue I ever laid eyes on, you wont find any humour or silly stuff in here, this is for serious ATARI users and should be read by everyone, good enough in my opinion to take the place of ATARI World,

There are many more, do visit my web page for a comprehensive list that includes screen shots and information from the diskmag authors themselves,

** ALERT ** ALERT ** Remember! when it involves a diskmagazine, DO NOT PAY, diskmagazines or any publication found on floppy disk should be FREE, Shareware, Licenceware or anyother ware that askes for money is a rip off, stay away, all diskmagazines should be FREE of charge,

Cheers.............!ynoT

AJ Wells <ajwells@ix.netcom.com> writes:

>Looking for a Megafile HD for my 1040ST... drop a note if you have one

As an ex-Megafile owner, may I recommend another approach? The old MF's are slow, noisy and very small by todays standards. For a little more than the cost of a MF drive ($60-75), you could get a Link 1, Link 2 or even the Link 96 which is new. The Link is a ACSI-to-SCSI adaptor, very stable, and can be had for $50-100 depending on used/new/etc.

With a Link and related software you can use SCSI 1 & 2 hard drives and a small SCSI drive is dirt cheap these days. And, hehe, a "small" SCSI drive is something in the 60-150 meg range, rather than the MF's puny 20/40 meg.

There are also other SCSI adaptors such as the ICD AD-SCSI and others. Any of them can become the front end for a hard drrive that runs rings around the MF at a very reasonable price. Not to mention CD-ROM, use of EZ-drives and others - the whole range of new access you gain with a SCSI set-up on your 1040. Try it, it'll feel like a new machine! (grin)

Hello:
I have been experiencing a problem with my falcon lately. Quite often
when i run a software program, (it seems to happen on several programs) at some
point i will go to load a file, When the file selector comes up, I will select a
file, and then i get two bombs and then am kicked back to the desktop. If i try
to reload the program, the system freezes and i am forced to reboot the system.
This seems to be a random problem.
Any suggestions? any help would be greatly appreciated.

> Is that the VOFA project, or is it the ET4000.TOS project ?

It is the ET4000.TOS project which is much more simple than the VOFA project.
There is also a small hack to redirect the screen output thru the ET4000 card
after reset so you can see what is happening. I didn't like very much Torsten's
PCB board drawings so I made an electrical drawing of his card and a new PCB
with thicker traces and pads.
It is very well supported by NVDI ET4000 version 3.02.

1092. Internet-games?

Newsgroup: comp.sys.atari.st
Date: 1996-07-22 00:00:00 UTC
From: jkauppin@muikku.jmp.fi
Message-ID: <4svu6t$ad1@teeri.jmp.fi>
Source record: 141377
Cross-posted to: comp.sys.amiga.games,sfnet.atk.atari,comp.sys.atari.st,comp.sys.ibm.pc.games.action,comp.sys.ibm.pc.games.flight-sim,comp.sys.ibm.pc.games.misc,comp.sys.ibm.pc.games.strategic,sfnet.atk.amiga

I'm looking for information about Internet-gaming resources.
Not game sites, though if you have something especially great to
recommend, please do so.

More of interest are primarily Internet-games.
With this I mean for example the following:
- games played on/over IRC
- games like Bolo, XPilot, Nettrek
- multiplayer software being run on special server,
like Air Warrior, Warbirds
- new multiplayer games like Sniper
- everything else

This information is needed for my coming article on Internet-gaming
in a Finnish computer-magazine, but I'll be more than happy
to compile all information to one file and post it to newsgroups.

Request being mailed to multiple newsgroups. No spam.

If you have something to tell me, please send e-mail (preferred method:
send both e-mail and public message) with at least a short
description of each game/service and it's telnet/www/ftp-address.

Thanks already,

jok

s > A black and white mag that costs $48 for six issues is pretty
s > steep isn't it? We in the Mac/PC world pay around $20 for 12
s > issues with full color 200+ pages covering from digital video,
s > multimedia, education, games, desktop publishing and the net.

that's for the EUROPEAN subscription rates, Mr. Janitor, which also covers mail rates to the UK and Europe - US subscription rates are $25US for one year. We're an independant magazine doing practically everything in-house except for the actual printing, not being cranked out by a sydnicate. Also take into consideration that we run comparitively few ads in our magazine compared with your boasting of two hundred page Mac/PC magazines, many of which have a good chunk dedicated to ads. However, we do pack it full of good editorial comment and dead-on reviews. We even did a couple of stories by Dave Barkin where he reviewed MagicMac, and gave advice on what Macs and Powerbooks would be a good choice to run it on - you can be sure we will do the same for the new versions of GEMulator and MagiCPC when we get our review copies (blatant request to ASH and Darek Mihocka :)).

s > Calamus SL is more catchup than leading edge.

I really beg to differ on that - but seeing as you confess that you have had little-to-no experience with a real Atari, your opinion on that is worthless. And I have better things to do than to get into a pissing contest with a skunk :)

Try telling that to MGI Software, who's now handling the Calamus line - they've expanded in the past six months on the strength of their new Windows-based version of Calamus, which has been flying off the shelves because it's proving to be the killer app PC users have been waiting for in the DTP wars. In fact, they've had to expand their premises TWICE during that time because of the demand and for giving their proper customer support. Oh, yeah, and I should add that they're planning at least one more major upgrade of SL for the Atari users - they're one company who remembers where their roots lie, and remembers their original customers.

s > I suppose ST users are use to pay more for less.

On the contrary, we do get what we pay for - excellent stable software and operating systems that doesn't require tons of RAM and

hard drive space to install, unlike your precious Macs. But then, I'm talking with Mr. Ignorant here, the laughing-stock of this and other conferences where you make yourself look like an idiot due to your overblown and just plain wrong observations and insulting flames about how all non-Mac owners are the great unwashed, while bragging about your system as if it were your manhood. If you really WERE a salesman for the Mac, Apple probably would've fired you years ago - they don't train chimps for the job.

Please note that I have nothing against the Mac- it's an excellent system that is unfortunately being strangled by the boneheads in upper management at Apple (so what else is new?).My problem is with guys who act rude, show absolute ignorance, and send flaming e-mail to their detractors in which they insult their dead relatives - and who hide behind their clueless system administrators who don't know the meaning of "nettiquette" and "net-abuse".

Remember, we survived Roger Sheppard (another infamous anti-Atari net abuser who wound up putting his foot in his mouth once too often - wonder where he went?). We can easily survive YOU.

1094. OFFICIAL : ST FORMAT Closure

Newsgroup: comp.sys.atari.st
Date: 1996-07-22 00:00:00 UTC
From: frank@support.tachyon.co.uk
Message-ID: <AE196499966830EA6@support.tachyon.co.uk>
Source record: 141379

It is with great sadness that I can finally officially confirm the rumours that
have been drifting about online for the past week or so. Future Publishing has
ceased publication of ST FORMAT magazine. Issue 86, dated September 1996, will be
the final issue on sale.

If you have unanswered subscription problems, you should contact Future
Publishing's Subs Dept., either via email to subs@futurenet.co.uk or by calling
01225-822511. If you have any queries about other matters related to the
magazine, you should contact Nick Peers (npeers@futurenet.co.uk) by calling
01225-442244. Alternatively, you can mail me at frank@support.tachyon.co.uk or
Frank.Charlton@dial.pipex.com.

We're all very sad to see STF close, especially so close to the Atari Shows in
September. Although STF will not be officially in attendance, you should find one
or two us at the Birmingham show, and possibly the London one. Don't forget to
stop by and say hello :)

I'm sure I speak for all of the STF writers and contributors past and present
when I say we've had masses of fun producing the magazine. Never have I seen a
market with such a level of closeness and friendship as I have with fellow ST and
Falcon users. While some of the team will no doubt drift away, Andy and I
certainly intend to stay active in the Atari market. Ad.Lib BBS is still here,
and I will be contributing work to the excellent AtariPhile disk/web magazine.
Other projects are on the go too, but it's not my place to say anything about
that :) Someone will doubtless fill you all in on what's happening soon, so don't
pester me with emails :)

Rather than see years worth of STF work go to waste, I've compiled a website -
A3, the Atari Article Archive. Eventually, this will contain every piece of

work
by most of STF's writers, as long as we hold the copyright. An early
version is
active now, and you can drop into http://www.netkonect.net/tachyon/A3 to
take a
look.

Sorry again to let you all stew among the rumours, but none of us were in a
position to make any kind of statement until today. I'm posting this
message
across related Atari Internet newsgroups, NeST, and the CIX conferencing
system.
You have my permission to reproduce this message across any other BBS echo
or
local areas, as you see fit. This message may not be reproduced in part or
whole
by any publications though - purely via the BBS and Internet news networks.
If
anyone wants to use it for any other purpose, contact me. The sole
exception to
this rule is AtariPhile, who may use this if they require.

I'll be back in this conference soon to chat and answer questions, but in
the
meantime - take care, and enjoy the final issue of STF.

Frank Charlton, STF Technical Editor and Writer, 1992-1996.

RETR <number> to show a message, and DELE <number> to delete it, are
the commands you're after. Messages will be held on the server until
you give the DELE command; you can have them sent multiple times if
you wish.

RFC 1939 has the gory details.

Tony was right about it, now it's really offcial ;(

Frank, you and all the guys have made the most outstanding computer magazine ever published...even account for all the other platforms!

Before I really got into on-lining, I depended on STF for informative articles and PD software. Oh what the hey...it was also funny! The captions were the best part. Because of the mag, I now see not all computer people are geeky like the ones in Micro$oft :)

The store in my area stopped carring it a short while ago snce I was the only one buying it :) But now the whole world will be deprived. I knew the ST would come to this with the disapperence of the old Current Notes, Computer Garden who was once the major Atari dealer in the area, and the SAAUG BBS. But the fall of STF is the final touch to the whole thing.

Good luck Frank and anyone else who worked on STF. Hope you can come up with something this good in the Atari field.

BTW, the best STF's were the ones with Paula Richards as the editor :)

l> IE, what software we will need, hardware etc.

Hi there,
Obviously you'll need a CD-writer, for example the Philips CDD2000 (like I have) or Yamaha CDR102 or CDR100.
You'll also need the software CDRecorder from Bernd Lohrum, which comes in two different shapes: one Audio only version and one Audio/Data version.
If you want to produce data CD's, you'll need a large partition on a HD for the program to put an image file of the whole CD before the burning (the image file is created by the program since the TOS slows the data transfer down a lot when searching into sub-folders.
Best regards,

Claes

This is the TT030 32MHz machine w/8 megs of RAM (4 are FASTRAM!).
Mouse, keyboard, and internal HD incl. (not monitor, but any VGA will
work) - all for $450.

Software incl. - PageStream, LDW Power, Word Perfect, Silhoette, Geneva
(multi-tasking), UIS III, NeoDesk, and tons more!!

Even though they OPENED THE WAREHOUSES of these things, you still can't
find too many for sale used. It is a good and fast machine, and it can
handle GIFs etc. very well with "Speed of Light" software (256 colors
etc.).

Leave mail or call 904-562-3332.

Al Huyghe (a50178w8@awnet.com) wrote:
: I have noticed that with some software packages, they supply you with
: a custom Icon you can use to install on your desktop.

Look for a program called Icon Manager. This will let you build a custom icon resource file that you can use to replace the ones that come with the basic TOS. I'm running a TT with TOS 3.06 and was able to gather icons for various programs, and demos of desktop replacements to build a largish .RSC that replaced all the conventional Atari icons. Oddly enough, the only ones I could not import into my new resource file were the old Atari desktop icons (go figure), but now I have a custom icon for just about every program, storage device and other desktop resident on my machine.

: Hi
: I'm using Notator 3.21/unitor-n with 3 Roland sound mudules and a 4 track
: cassett recorder(sympte).Every time I stop the sequencer I get a "midi
: offline" error message on my sound modules.The Roland manual says that the
: midi cables aren't connected properly.

This is due to a MIDI message called active sensing. If a module stops receiving it then it is meant to turn all notes off. Notataor sends 2 of these messages when you press stop just to make sure all notes are turned off. It is these messages that your Roland synth picks up and complains about.

: They have all been checked and work
: fine.Whenever I start my 4 track(sympte) I get a short explosion of sound
: and the overflow box at the bottom of the main page shows a speckled beam.
: Is there anyone out there that can shed some light on my problem.Your help
: will be greatly appreciated.Thanks....Ron L

I guess it sends a load of data at once giving exact positioning info, and Notator sees this data and just panics. Only a guess. You could try recording that data and that would then tell you exactly what it was sending.

From: dzander@solaria.sol.net
Message-ID: <4sv776$10a@solaria.sol.net>
Source record: 141401

Hi, I cannot upload from my AtariST to my UNIX host using AnsiTerm.
I can download with any z,y,x-modem but I cannot get it to upload
in any one, not even xmodem. Can someone help?
This is what I do:
UNIX> rz
activate your upload command now
#@@@@@@@@@@@@@@@@@@@@@@@@

<it prints out a whole lot of characters and if I remember correctly>
<it also beeps my terminal>
<then I activate Upload in the menu bar with Zmodem highlighted>
<then the xyz program runs and just says that my receiver is not ready
to receive and it says TIME OUT>

I just cannot get anything uploaded to my host! Can anyone help?
I also tried:
UNIX> sleep 30 ; rz &
because I thought it was running ahead of me and was timing out before
I could select from the menu bar and activate xyz.prg. Should I *not*
put this in the background?
UNIX> sleep 30 ; rz

Any help appreciated. Thanks.

>--chris

My problem is bad packets too! I have installed HSMODEM7, to no avail. Still the same thing. With Oasis2 I can send mail, but have not yet suceeded in getting any news at all. I checked the sockets and was connected to NNTP and seemed to be recieving stuff (and my modem lights were flickering) but nothing came through.

And I STILL can't exit Oasis2 properly. The thing locks up and the mouse vanishes as soon as I click on QUIT.

Any ideas, anyone?

Source record: 141403
Cross-posted to: comp.editors,comp.sys.atari.st,de.comp.sys.st,fido.ger.atari,maus.sys.atari.software

I have uploaded the binary of Vim 4.2 for Atari MiNT to:

ftp://ftp.oce.nl/pub/misc/vim/atari/vim-4.2mb.tgz

The mirrors should have it soon too.

The gtar-zipped archive contains the binary and the online
documentation. For the sources and other stuff get the original Unix
distribution (vim-4.2.tar.gz).

If there are Atari specific problems with this, contact me.

Happy Vimming!

Tschuess

See the ad at Toad www.toad.net .
They have Mac and PC forms of the Atari emulator and the specs are online.
They provide the software in English and German.

The web page will answer your questions, and give you a point of contact for purchase.

> catchup than leading edge. I suppose ST users are use to pay more for
> less.

Though you did not note it, the $48 subscription fee is for overseas subscriptions - Current Notes magazine is published in Canada. We find that magazine coverage in the MAC/PC publishing industry is repetitive and pandering. There are some excellent publications however, and Current Notes rivals them.

We're extremely proud of our production values and strive to produce the best, most informative magazine for TOS/GEM/Geneva/MagiC/GEMulator users. We're also pleased to count many MAC and PC users among our loyal subscribers. Our U.S. rates are $26 US per year (6 issues). Our Canadian 1 year rate is $35 Cdn.

Producing a magazine for the current marketplace is more a matter of proprietary interest than profit hunger. Higher publishing costs dictated by lower run volumes are the budget items which tend to preset our subscription rates and our advertising rates. Although our subscription rates are higher per page, our content is not ad or picture heavy - Current Notes provides a lot more bang for the buck than publications in any other milieu.

Calamus SL is the software which we use to produce, set and publish Current Notes. From time to time we also use Calamus 95 and Calamus NT (both, obviously, on PCs/Workstations). Both SL and its PC/DEC Alpha

counterparts outperform Quark, Pagemaker, et al, by a wide margin. We are also dabbling with DAs Layout running under MagiCMac. In any situation, the Atari/TOS/GEM-originated software RIPs, converts, prints, renders, displays, scrolls, and retrieves data faster than Quark, etc., by an alarming margin.

Current Notes does not care about the Tramiel family.
Current Notes does not care about Atari Corporation.

Current Notes DOES care about Atari/TOS/GEM/Geneva/MagiC/GEMulator users.

We're having a great time producing a magazine which is constantly improving. We're delighted to work with a wide variety of top-notch contributors, all of whom regularly produce a exciting variety of valuable work.

RE:DESKTOP ICONS
a> I have noticed that with some software packages, they supply you
a> with a custom Icon you can use to install on your desktop. My
a> question is.. How do you import these into the newdesk.rsc file.

You don't modify the newdesk.rsc file (I've never heard of one
actually). Load a rsc file into icondraw. Choose an icon Load your
DESKICON or DESKICN.RSC file into icondraw. Use the GET and PUT
commands in the menus to replace existing icons. You can also use
RSCXPAND.PRG to increase the number of available slots in your
deskicon.rsc file. Read the excellent instructions which are supplied
with icondraw.

1126. HP LaserJet 5L Drivers?

Newsgroup: comp.sys.atari.st
Date: 1996-07-22 00:00:00 UTC
From: SSweet@mettav.demon.co.uk
Message-ID: <16509_SSweet@mettav.demon.co.uk>
Source record: 141461

FROM: SSweet@mettav.demon.co.uk
SUBJ: HP LaserJet 5L Drivers?

f> Having recently purchased an HP LaserJet 5L printer,

f> Currently I am running SpeedoGdos v. 5.0c, although I am expecting a
f> copy of NVDI 4 from Toad shortly. I am using a driver called
f> LJ_MF.SYS which seems to only give me a maximum of 300 dpi. Also, it
f> leaves a small half circle (sorta like a little smile) in the upper
f> lefthand corner of each printed page.

Looks like the driver is trying to switch the LJ to a mode that is not
supported, that used to happen a lot on the 8 bitters when you tried to
switch a printer to epson compat mode.

f> Has anyone found a way to
f> upgrade this to 600 dpi and to get rid of the extraneous character?
f> Has anyone made a driver for the 5L using the NVDI printer
f> configuration utility?

I use my LJ 5L with NVDI 4.11 and get 600 DPI with no modification to the
driver, also i use Papyrus drivers at 600 DPI no prob's.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

Ciao Ludovico,

LZ> I am planning to replace the Falcon internal 2.5' IDE hard
LZ> disk with a IDE 3.5' HD. I have already found the 2.5-3.5
LZ> connector (in a Amiga repair service). I am wondering: I will
LZ> have to use again an IDE mechanism (max 540 MB) or I can go
LZ> for a E-IDE mechanism? Is there someone who can suggest me
LZ> some already tested hard disk I can go for?

You can use either IDE or EIDE - no problems at all.
Some HD's can't be booted from however: Don't use Western Digital because I've never been able to boot from them. Quantum seems to work very well. Some Seagate HD's can't be booted from. Most Conner HD's seem to work fine. If you're concidering a specific HD, you can send a mail to me and I'll tell you if it's among the ones I've tested.
If you use another driver software than AHDI/HDX, for example HDDriver or SCSI-tools/HuSHI, you'll also be able to have two IDE/EIDE drives if you need more space...

Best regards,

Claes

1132. LAN+MAC???

Newsgroup: comp.sys.atari.st
Date: 1996-07-22 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_bf4a2c4a_Claes.Holmerup@p5.dada.ct.se>
Source record: 141467

Hello everyone,

Sometimes I need to exchange data between my Falcon and a Mac.
The thing I would need a little help with is how to connect the computers with each other. The LAN-port and the Mac's serial port seems to be the same connector, so would it work somehow to connect and with some software (which software?) be able to share the HD's or at least send and recieve files between the computers?
By the way, can I use my Zip-drive to exchange data as well? I know it works between the Falcon and a PC (if you don't use partitions bigger than 32MB on the Zip), but does it work the same way with a Mac?
Thanks in advance for all the help I can get.

Best regards,

Claes

I've been trying to get this up for the past 6+ weeks, and now it's
finally there for all those out there to read. Enjoy it. BTW,
the Battlesphere Playtester's Page should get updated sometime early
next week. And by the end of the next month you will most likely see
previews of Breakout 2000 and Phase Zero(even though it was
cancelled).

> the pond scum found at sewage treatement plants).

Richy Rich, what comes around goes around. You made an issue of my parents in
not such a good way. I countered and must of hurt your feelings. Too bad.. I
never seen such a baby as yourself. Did you always cry to your ma ma when
little kids made fun of you? I suspect thats what my sysadmin thinks of you.

What bothers me, however, is that his sysadmin has stated that, since he as to work
> "60-80 hours per week keeping the network up," that he doesn't have time
> to be bothered with net.abuse complaints. As a network technician, I
> can only extract a few possible causes for /his/ work overload: (1) U

> net.abuse attacks by the library janitor and is hiding behind sinclap
> (there's a pitiful picture for you); or (4) he's just not competent to
> handle his job.

My sysadmin has no grounds for actions. He obvious stated that my content in
no way is considered net abuse - what ever that is suppose to be. What is the
issue is that you think you can censor thought and words that are not to your
liking because you do not know how to handle it, because YOU ARE A BABY! Must
of been a Ma mA boy..
My sysadmin has followed my posts and did have a problem with one and I admitt
I did go over board.

> Sad that American higher education has come to this.

Espicialy a baby such as yourself. You obviously have not been prepared to
deal with life in the real world. Time to discard that security blanket that
your mother allowed you to suck on and grow up!

GREETINGS..

Having read all the stuff here, I've decided to wait until I get a 28800bps modem before I start fiddling again... especially as the 14400bps mode I'm using works fine ATM. and the 19200bps baud rate of the comms port, gives no noticeable speed increases with normal use over the 14400bps of the mode.

If/When I get a new modem then I will sort the problem out... and probably get a new TOS version at the same time :)

Yes, you can connect botzh computers with a normal Mac serial cable. On the Falcon side you need HSMODEM, a set of programs that make the port REALLY work. Then you need a terminal program on both sides to transfer the files.

If you have MagicMac running, you could even share the drives using Midicom.

Gustavo Comezana (comezana@math.psu.edu) wrote:
: Does anybody have any comments/experiences/opinions on this
: accelerator board? How difficult is the installation? How well does it
: perform? Are there incompatibilities I should be aware of? I have an
: Atari Falcon in its original case, with a 14Mb memory expansion
: already installed; will things get too crowded in there? Thanks in
: advance.

I have a BlowUP FX installed so I can relate my experiences:

* One quick note, VGA, SVGA, or Multiscan monitors are almost essential to get the best performance out of the FX system. Since the RGB (SC1224/SC1435 monitors) video is tied to the system clock, there is a 32mhz limitation in RGB modes for CPU and system/BUS. I believe that the FPU and DSP can run at 48mhz, even in RGB. The point here being that if you install the FX, you're probably going to want a Multiscan monitor.

Difficulty of Installation:

Installation definitely requires a skilled technician, in that some of the solder work is quite delicate and requires the proper tools. It is worthwhile to allow an expert do the work. The installation tips call for keeping wires as close to the board as possible, and keeping them as short as possible; this turns out to be very critical to proper operation of the FX acceleration. My wiring is actually tacked down to the motherboard with tiny drops of SuperGlue.

Also, it is essential that you don't assume that malfunctions are due to improper installation. Check for software conflicts and inappropriate configuration first. I had several hardware and software problems that I "blamed" on the FX board. In reality, the FX was only causing one problem, and all of the rest had been caused by me.

For me, the problem turned out to be DMA noise. I was testing software from a SCSI drive when accelerated, which turned out to be something of a mistake. The system would crash when loading, corrupt my SCSI drive, etc, all because of DMA noise that was mucking up the SCSI system. I assumed that the FX was flaky or that it was improperly installed so I had all kinds of fixes done, and even re-installed several times. All along, the failures were due to DMA noise.

DMA Noise appeared in the form of crackling audio (when Cubase Audio or Logic Audio was loaded), corrupted SCSI Drive read/write, and corrupted Floppy read/write. When I contacted the designer/author of FX with these symptoms, he sent me a solution. My message was as follows:

> I am still having three problems and would appreciate your advice:
>
> 1. SCSI corruption at 40/40mhz
> 2. Floppy corruption at 36/36 or 40/40mhz
> 3. Crackling at 36/36 or 40/40mhz in Logic Audio (DMA or DSP
> noise), even when not playing music.

You should install the 74F04 again, that should stabilize the DMA system.
If errors still occur, you can add the following:

Insert a 470 Ohms trimmer in the DMA-clock, ie. the wire to R221top or
straight to the DMA/chip (with FPU) as follows:

```
from 74F04 >------RRRRRR-------> To ground (or open, try it)
^
|------------> To R221top/DMA-chip
```

If you turn the tap to ground, the errors start disappearing and
eventually are gone. To much ground will result in crashes. The optimum
position is just before that point :-)

It is important that I mention this fix may not be recommended for all
systems, and may not be the answer to all of your problems. I can say
that it definitely worked for me.

I should also mention that the designer/author of the FX that I contacted,
George Acher, was extremely responsive, knowledgeable, and patient. He
always responded in a timely manner with a helpful attitude, and
intelligent solutions. He should be commended for his support (that is,
go and buy an FX :))

Performance:

I personally have an Atari Falcon030 with a 16meg Wizztronics ram board
(holds a 72-pin SIMM). I am not currently using the Fastram option, but
some prelim testing with it showed a clear speed increase on file
read/writes and screen operations.

Acceleration is quite good. I generally run the machine at 36/36mhz
with the DSP and FPU accelerated. At this speed, my machine performs
slightly slower than a TT, but with the added processing power of these
accelerated co-processors, it is very impressive. I am also able to run
the machine at 40/40mhz for certain applications (I'm not all that
confident yet) such as Phoenix II object renderer and MPEGfever mpeg
encoder/decoder. For these programs, I have been able to run the machine
for 12 hours or more processing a task with no crashes or glitches. I
have yet to experience a crash under these programs while running at this
speed, and I frequently run the machine on these overnight processing
runs. At 40/40mhz, speed is faster than a TT (Fastram not included) and
again, with accelerated DSP, FPU, and system BUS, this is very apparent.

Also of note is that acceleration speeds up the BUS significantly. My hard disk experiences a 33% data transfer rate increase, that is: 2meg/sec->3meg/sec. This is really very important. MPEG playback, FLI playback, and other disk intensive operations are significantly enhanced.

Stalker 3 (Telecommunications) even works better! Before, when performing an upload or download at high baud rates (port at 38.4k, modem 14.4) occasional errors would appear. Now with the system accelerated, these have disappeared completely!!!

Also, BlowUP screen expansion, virtual screen, and processor accelerating screen saver are very nice. There are a wide variety of options that are available (if you have the right kind of monitor) but even a regular VGA can accomodate a nice virtual screen and a few additional graphics modes.

Incompatibilities:

Thus far, the only incompatibilies that I have noticed involve NVDI 3. In that some function of the FX brings out a flaw in TOS, it is necessary to use a patch program or NVDI. I have an older version of NVDI at the moment, and it is incompatible with several programs that I run. If I slow the system down I can run with Warp 9 and things operate correctly. Thus far, I can only get the system to run cleanly at 40/40mhz with NVDI installed. This may not be a universal truth, but appears to be so on my system (until I figure a way around it, of course).

Space Considerations:

This is definitely a matter of concern. I currently have my system in the original 1040ST style case, without the shielding. As mentioned above, I also have the Wizztronics SIMM board. I also installed a fan in the left side of the case to blow under the FX at the CPU.

The better alternative is obviously to install your system in a larger case such as the Wizztronics Rack case, C-Lab MK-X case, or Desktopper. This will insure better ventilation for the components that will be running warmer than normal, and allow for shielding as well (for the cases that are metal or have another form of shielding). I suppose that I would be possible to cut the Falcon shielding so that the FX has room, but I personally wouldn't want to do anything that might increase heat retention.

Of course the other advantages to a larger case include the ability to use additional drive mechanisms. I have a Wizztronics Rack case awaiting final installation. This permits a 3.5inch (faster and larger) IDE Drive, other internal drive types (like a Panasonic Powerdrive 650meg Magneto-Optical/Quad-Speed CD-Rom), and even an internal SCSI drive. Also, further upgrades and additions such as the FX PS/2 Ram board (for additional 72pin SIMM), Expose Digitizer, Falcon Speed, etc... can be accomodated with a larger case.

So... Adding the BlowUP FX is definitely an adventure. Follow the instructions, be patient, and think. If you've exhausted your resources, contact other FX users here in the newsgroups (such as myself) or even the

FX designer.

As with any hardware modification, there is the possibility that something may get damaged, or that things will not work properly right away. Be aware of this fact, and you won't be as disappointed or frustrated. If however, you really need some speed and you have the means, the FX is a cost effective and versatile expansion for the Falcon. It can take some time and effort to make it behave, but it does provide a lot of function for not a lot of money. I am certainly very, very pleased with my FX.

Other accelerators to look into:

Wizztronics Hawke
Titan Designs Nemesis
Afterburner040

Reportedly, Nemesis and Afterburner can be used together -very interesting ;)

Try to turn off any program that you have in the AUTO folder, if you have any.
Also turn off all ACCs. It might be things like that rather than the actual
program itself.

Hello again people,

You may of been wondering why the information on the Baby
Turtle Virus still isn't here!
Well due to copyright reasons and the such I can not give you
the information, but for all those still interested the
information and many other facinating facts can all be found
in the book, 'The Invisible Turtles' (I suppose TIT for short)
the author is around here sometimes so I don't want to offend
him, and I thought it would be a good chance for everyone to
buy the book.

(This wasn't a publicity stunt or anything honest)

Ade.

P.S. (Pinch of Salt) which is what any of the above and any of the
previous articles should be taken with.... Please note though I don't
believe any of this salt will kill the Turtles unless the Author can
tell me differently !

(It might be in the book so don't forget to buy it!)
The Invisible Turtles price 29.95
probably not available from any good book shops.

> to ASH and Darek Mihocka :)).

My mistake for the error in subscription rate. Still, $25 is alot for a six issue subscription and 56 pages per issue. I suppose that the few ads is due to the miniscule Atari scene and not much is developed for it as in the past. I have a few old issues of the original Current Notes. Nicely done considering the resources and Atari scene.

Yes, Mac/PC magazines have hell alot more ads due to the nature of the platform. Ads are useful to inform the consumer of the products and services that exist in the other platforms.

Sounds like sour grapes. I take it that Calmus is not as good despite the praise of the Atari Jihads. Considering the sorry state of the ST scene, the Jihads will praise what exists considering the small choices available.

Shades of WordPerfect here. WordPerfect is on their third keepers now. Flying off the shelves.. Thats funny, I haven't seen Calmus on the best seller list in it's category. It's easy to expand when you start from such small premises in the beginning. Yes, Calmus maybe selling but not the claim that you are stating. I supose when you are running a two person operation, you have bottomed out and can only go up.

Atari roots...I suspect many of the Atari Calmus users have upgraded to Windows to begin with. Also this new version is vapor.

I see, the industry has expanded and you are afraid of change. Considering the market dynamics today, PC/Mac components are second nature and commodity. I don't thing that harddrives are manufactured less than a gig today. Memory is a commodity as well. Unless ST users are hardup towards additional resources which are standard on the Mac and Wintel world.

Every platform has apps which run nicely on low memory and storage. ST users think that their platform is unique because of it. My take is because the ST is still on 80's apps which is mostly PD and not any real world apps that MAc/Wintel people take for granted such as family apps in the area of Encarta and Groiler. Atari Jihads think that their OS and apps is are more stable compared to others. This asertion is perputrated by Atari Jihads in their fantasy land.

Is the Atari Falcon still $1399 for a 4/80 config? That kind of money buys functional Powermacs and Pentium systems. I MEAN systems with CDROM to run the cool stuff. I suspect in the Atari world, cdrom's are to be drooled over considering that feature is not supported..

>

Those boneheads at Apple(maybe not today) managed to grow the firm past $10 billion annualy, allocate appropriate resources for R&D and still come out with cool stuff.

My main detractor initiated my response by making unflattering comments about my mom. I never sent anyone a flaming email. You need to get your facts straight.

As for your difinition of nettiquette and net-abuse, any sane sysadmin would consider this a debate.

In article <4t0gv7$6f3@news1.io.org>, hcarson@io.org (Howard Carson) writes:

> Though you did not note it, the $48 subscription fee is for overseas
> subscriptions - Current Notes magazine is published in Canada. We find
> that magazine coverage in the MAC/PC publishing industry is repetitive
> and pandering. There are some excellent publications however, and
> Current Notes rivals them.

I noted earlier of the mistake in the subscription price.

I do take exception with your asertion that Mac/PC publishing is repitive and pandering. And i doubt if Current Notes rivals them. You are sure of yourself cause of the arrogrance of the statements you have stated. MacWorld is one publication that does not pander. MacWorld is on the cutting edge when it comes to its content as well as its outspokeness on issues that have put Apple negatively in the limelight.

The past issues and style of Current Notes which is most likely similar to the existing ones is nice hobbyist rag but in no way competes with the ones such as MacWorld that have moved into other features such as multimedia, digital video and internet/browser content. Current Notes is nice if you still like the past.

>
> We're extremely proud of our production values and strive to produce
> the best, most informative magazine for TOS/GEM/Geneva/MagiC/GEMulator
> users. We're also pleased to count many MAC and PC users among our
> loyal subscribers. Our U.S. rates are $26 US per year (6 issues). Our
> Canadian 1 year rate is $35 Cdn.

I would be proud of a six issue annual subscription that raked in $26. You should broaden your audience to include Mac/PC content. Have a hobbyist flavor. I would be the first to subscribe but in no way give up my subscription to macWorld and my free subscription to MacWeek.

>
> Producing a magazine for the current marketplace is more a matter of

> preset our subscription rates and our advertising rates. Although our
> subscription rates are higher per page, our content is not ad or
> picture heavy - Current Notes provides a lot more bang for the buck
> than publications in any other milieu.

I disagree. I like add glossed pubs like MacWorld. Keeps me informed of whats available. Advertising determines subscription price. Does Current Notes cover current analysis and issues current to the internet, multimedia, digital

video and education to name a few. Or is Current Notes is for ones to publish
their programs written in basic?
>
> Calamus SL is the software which we use to produce, set and publish

> Quark, etc., by an alarming margin.

Interesting..Never heard of these claims on how well Calamus does against their
competitors. Sounds like Calamus real benefit is a lower price and
implementing features that the others really had at a higher cost.
>
> Current Notes does not care about the Tramiel family.

I don't thing the Atari cummunity does either.

Announcing Peter's page of Atari Sound and Midi programs and resources.

Midi and Sound

Links to various Midi utilities, algorithmic music, sound editing and
creation. I have searched around for the most useful, interesting
programs and resources and this page is the result. No pictures, just
the facts :)

Please note that the page is aimed at ST and not Falcon , mainly because
I dont have a Falcon.
Any comments and further leads would be appreciated..

I am (still!) an Atari user because I use Cubase to arrange Christian songs. I recently got a copy of the SpiritWare Bible Concordance with the King James version of the Bible and I find it very VERY useful.

I would like to get hold of one or more of the other versions of the Bible that SpiritWare used to sell and it seems now that the only way to do this is to buy them 2nd hand from someone who has them but no longer uses them due to change of platform or some other reason.

So, if anyone has a copy of NIV of NASB or the Greek NT and would like to sell the on, please get in touch with me by email.

Regards,

John.

Oops, forgot to say!

Vim stands for Vi IMproved. Vi is the VIsual editor known from Unix
systems. Vim has many more features than Vi (e.g., multiple windows,
integrated online-help,etc.).

For details refer to the Vim pages:

http://www.math.fu-berlin.de/~guckes/vim

Why bother with X11R5, just use CAB under GEM for WWW browsing. Unless you
want it for something else of course. I think you may find that X11 works
better if you start your connection after X has loaded. I think I had
the same problem when I initialised the connection then started X, it just
would not work. But I don't use X anymore, since I have no need for it.
I use MiNTNet with CAB under GEM and it works very well!

> Chances are you are using version 0.7.7 BIN IT, use 0.7.8 or 0.7.6 :-)

I've had similar problems using Antmail on the Falcon:

I've tried using .6 .7 and .8 and _all_ three have had the same problem -
namely that when you try and retieve a group of messages, they all hung on
the delivery of the last message (usually with about 40 bytes to go).

Unfortunately, with my pop3 server (mail.netlink.co.uk), the server doesn't
seem to like resetting your mailbox after a failed session - I've had to
email the support to get things cleared up.

Whether or not this is to do with a rogue message in the mailbox (after all,
I should imagine the first thing we all do is send a test post to ourselves,
probably from within Antmail) I do not know.

What I do know is that none of the messages in the mailbox are of any
importance as no-one yet has my new e-mail address and they are just
tests sent by various means. So I'll probably ask for them to be deleted
so I can start afresh.

Anyway - here's hoping things work eventually!

Regards,
Andrew

Doesn't stop some of us mad suckers grappling with the thing. Not that I am
doing so at the moment. Think of it this way, there are nnn million _users_
online, but few of them are able to explain how the machines they are using
actually work. If you have the time and the inclination try them all; NOS,
Oasis, StIK, Mintnet, hell even last years version of Winsloth.

If you think the chaff/nuggets ratio is too high, figuring out other ways to
connect could be the answer. It is certainly to be encouraged.

It is not looking good for ANY of these games. But I thought that
screenshots and a preview report would be beneficial here so th remaining
users could still get some intelligent information. But, if no one want me
to spend my time doing this... I won't. Really I do have other things I
could do to make money.

Thanks for the information. One point: if I'm using Ease as a desktop replacement, does Magic being in German constitute a problem? Presumeably error reports would be a little confusing, but as far as I'm concerned a crash is a crash is a crash - most of the time the error reports are of no help to me anyway. What else would be affected?

>session without ICE bombing or locking up partway through.

This problem was reported within a few days of the release of v2.0. I sent test files to David as I had exactly the same problem. I sent a message about a week ago asking if he had found the answer yet. No reply to date so I guess its a bigger problem than was first estimated. Given that this newsgroup has gone very quiet about v2.05 I assume that users have given up and gone back to v1.35.
I would like to know what the projected date of a re-released reliable v2.0x is. On the surface it really looks good but at present (on my set up anyway)it simply doesn't work !!

I am using CAB v1.3. I have no idea what WWW131.ZIP is. As I understand it,
CAB v1.3 is the newest.

I notice that some JPEGs will not display. Others will show in greyscale
but not colour. Most, however, do work OK. So it's not just you.

I am using CAB on a PPP connection with MiNTNet.

From: Spencer@mettav.demon.co.uk
Message-ID: <16535_Spencer@mettav.demon.co.uk>
Source record: 141457

I've a bit of a quandary that needs some help.

What it is I am interested in buying a removeable harddisk for use on both my TT, Falcon and PC, the qquestion is which one?

The Syquest seems to be faster, easier to use (treat it like a harddisk), they have a better name, etc.

The Zip seems cheaper and to have more backing from others.

Anyone have any ideas or suggestions to make?

I allready own an Insight Floptical so don't want to make such a mistake again. My current favourite is the SyJet, but I am willing to be persuade

Spencer

: Has anyone else noticed that CAB still seems to get stuck on some jpegs?
: This is CAB from WWW131.ZIP (it's better than previous versions but still
: seems to hang).

Sure does. Hitting escape aborts the holdup and normally CAB will then go onto the next file to load, although it has retried some JPEGS three times on me...

: Also, what about putting support for JPEGD into the jpeg overlay? So the
: decoding of jpegs will be a lot faster on a Falcon. Please. :-)

That would be a good highdeer :), but I think that JPEG decoding is pretty quick anyway with CAB_JPEG.OVL. Of more interest to me would be seeing quicker GIF image dithering.

To boot from some WD drives you need a boot floppy. Such a floppy can be
created
with SCSITOOL or the tools coming with HDDRIVER. The programm on the
floppy
initialized the drive before the first read access.

1202. NOS handles dynamic ip w. ICMP ?

Newsgroup: comp.sys.atari.st
Date: 1996-07-23 00:00:00 UTC
From: fabrice.gamberini@art.alcatel.fr
Message-ID: <19960723071417.aaaa005IK@babyblue.cs.yale.edu>
Source record: 141483

hello,

i suspect this problem has been already addressed a million times,
but since i'm stuck...

i have (at home) a MegaSt4, 28.8 modem, hsmod06 etc... and an
account on an ISP using PPP with dynamic IP address. I tried
using NOS (0.42 then POP3) but neither would catch the
" PPP link from (xxx.xxx.xxx.xxx) to (yyy.yyy.yyy.yyy) "
message and deduce my assigned address... so i had to
install mint/ mintnet and use pppd+chat, which works about
flawlessly except that it *freezes* from time to time.
but since i have no pop3 client (yet), retrieving my mail is
sort of tedious (thru telnet).

so i'd like to know if NOS can use ICMP (like pppd)
to retrieve the remote and local hosts' addresses.

tia,

fab.

: I have tried ICDRAW.prg with no success. Is there another way??

Yes there is another way. It is _very_ long winded however. What I do is load the .RSC file with icons into GEM-View 3.16, rasterize them, save them as a GIF or whatever and load them into any art package with a zoom. I then draw the icon on a piece of paper, load ICDRAW and draw the icon in by hand. If that isn't long-winded then NOTHING is! :)

Prism Paint has a zoom that is good to use like this, as is APEX media. It means you can see exactly where each colour pixel goes...

Sorry not to reply to the original post.

I network a TT030 and MegaSTE here via the LAN port. The same method would work for STs cia serial RS232 port. I use MiNTNet, and it works very well.

:>
:>
:>Hi,
:>
:>I am planning to replace the Falcon internal 2.5' IDE hard disk with
:>a IDE 3.5' HD. I have already found the 2.5-3.5 connector (in a Amiga
:>repair service). I am wondering: I will have to use again an IDE
:>mechanism (max 540 MB) or I can go for a E-IDE mechanism? Is there
:>someone who can suggest me some already tested hard disk I can go
:>for?
:>
:>Thank you,
:>
:>Lodovico Zanier
:>(Rome, Italy)

These work fine with the Falcon as (E)IDE drives using ICD Pro Utilities:

1. Micropolis 4110A - 1.0 gb
2. Seagate ST3283A - 240 mb
3. Seagate ST5850A - 850 mb

None of these drives are currently produced, but the Seagate 5000 series continues. Try the ST51270A - 1.27 gb. Also their 2.1 gb drive is nice, and I'd be surprised if it did not work as well as the others.

Cheers,
Vacuo

I'm a little confused here. Does this mean Atari is planning on
releasing these titles, or are you just showing shots of what might have been?
And my guess is that Rebellion isn't anywhere near finished with
Skyhammer and haven't playtested it because it's not going to be released.

1210. Software Discounts

Hello Everyone!

As you may already know, Mountain Software has moved the majority of our development efforts to Windows on the PC. Because of this, we have reduced prices on our entire Atari ST product line. The new prices are as follows:

Easy Base (1.0)..... $10
Easy Go (2.0)..... $10
Easy Money (1.2)..... $10
Learn my Numbers (1.0).... $10
Manualizer (2.0)..... $10
Mountain Reader II (2.9).. $35
Mountain View (1.6)..... $10
Movies at Night (1.2b).... $10
Pen Pal (1.2)..... $10
The Recipe Box (5.1)..... $35

If you would like more information on any of these products, please visit our web page at http://www.pacifier.com/~awatson or e-mail Anthony Watson at awatson@pacifier.com. All prices include shipping in the US/Canada, elsewhere add $5 shipping. Payment must be via check or money order in US FUNDS only.

Thanks,

Anthony Watson
awatson@pacifier.com

>Should comp.binaries.atari.8bit be created?
>Should comp.binaries.atari.8bit be moderated?
>Should comp.binaries.atari.st be created?
>Should comp.binaries.atari.st be moderated?

Personally, all I want is somewhere where ST/Falcon stuff can be posted -
unmoderated if possible (IIRC the person who started this off said that
part of the problem with the old system was that it was hassle to get
stuff posted and there are additional difficulties if something happens to
the moderator).

My 2 pence worth (I'm Engish :-))

>I thought this program was to do with reclaiming fragged memory on 68000
>machines %^{|

I thought FOLDRxxx.PRG was to allocate more memory to disk buffers to get round the 40 folder bug. There were other programs - the POOLFIX3/4... ones that fixed a problem where if a bit of memory was split in two, it would later recombine wrongly - it is IIRC the same part of memory that FOLDERxxx is expanding. This bit of memory is used to store information about files which are "open".

If you have a hard disk and early versions of TOS (at a guess most/all of 1.xx) then use folderxxx (or an alternative - for instance the one built-in to ICD-software). The defragging(memory) problem is much more wierd - *all* of the POOLFIX programs have bugs in (aparently) - POOLFIX1/2 certainly have as the author released version 3. I think someone else fixed that (or maybe he just addded XBRA compliance), but aparently *this* version is also bugged. Someone a while ago recommended using version 3.
In short - aaaarrgghh!!

> >> Is MagiC 4 not fully compatible with NVDI 3.01?

>for the emulator, but is it worth it?!

I presume you know that you need to be running some form of Unix on your PC. Personally I use Linux on my P120/16MB. It runs at a pretty decent speed - I think faster than my ST, but I haven't used it much yet. It should run fine as long as you have at least 8MB of memory. STonX now runs under SVGAlib as well as X-windows I think - this will help to reduce the memory requirements.

You can compile two Atari's - a 4MB or a 14MB version. The 4MB version is recommended for PCs with less than 16/20MBs.

Good Luck (although it is pretty easy to compile - just read the docs - they are very straightforward).

1215. PCW Locoscript -> ST

Newsgroup: comp.sys.atari.st
Date: 1996-07-23 00:00:00 UTC
From: guy@swampdog.demon.co.uk
Message-ID: <838227814_OASIS_@swampdog.demon.co.uk>
Source record: 141496

Hi folks,

I need an ST program to convert the Amstrad PCW512 Locoscript word processor files. RTF format would be nice but plain ascii would do as none of the files are overly large. I don't want to go to the trouble of finding somewhere which can transfer the PCW disks to ST disks if I can't do anything with them afterward.

Thanks to anybody who can help!

This is a limitation imposed by the newsreader.
You can either change newsreaders (if possible).
You could also specify a file to load at edit time &
just type in the name of an alternate .sig file manually.

You might do better if you tell us which newsreader you are using.
rn, trn, nn, tin...

I agree totally, But what about all the people who have spent as
long as I can remember knocking STF and calling it, never ever
forgetting one little mistake and never mentioning the good, surely
even they must concede that its a bad thing that STF has died?

>Before I really got into on-lining, I depended on STF for informative
>articles and PD software. Oh what the hey...it was also funny! The
>captions were the best part. Because of the mag, I now see not all
>computer people are geeky like the ones in Micro$oft :)

Yes again I agree, some people called it childish, well I had many
programs reviewed, hmmm about 8 or 10 actually, all had funny or
sarcastic comments, I didn't mind at all, would have been a bore if
everything had to be serious,

>The store in my area stopped carring it a short while ago snce I was the
>only one buying it :) But now the whole world will be deprived. I knew

Strange that my local big store stopped stocking it, but about two
months ago it started again, I remember it is not that long ago that I
posted something in this group telling everyone it was back in the
J.menzie stores?, a little short lived it seems,:(

>the ST would come to this with the disapperence of the old Current Notes,
>Computer Garden who was once the major Atari dealer in the area, and the
>SAAUG BBS. But the fall of STF is the final touch to the whole thing.

Well I disagree about final,
There is a new subscription only 60 page glossy magazine being
started by the people on cix, it will of course be available to all
atarians, but so far all the signs make it look pretty impressive, it
is a definate goer and will be called "THEY THINK ITS ALL OVER" and
have the abvious sub title ?? :), 3ukp an issue I belive and need a
break even readership of 500 only due to the fact that all
contributers are working for free etc,
I have no idea why they havent informed the actual Internet community
yet, but expect to hear more about this soon as it is a goer :)

That is all I know about it.....

>Good luck Frank and anyone else who worked on STF. Hope you can come up
>with something this good in the Atari field.

Yes Frank,Andy and Nick, try and keep involved lads and am looking
forward to meeting at least two of you in Birmingham on the 28th of
September for the ATARI shows :)

>BTW, the best STF's were the ones with Paula Richards as the editor :)

Well I thought Karen was pretty good,
I thought ninety nine percent of all ST Formats contents where good,

>Eric Noss
>a.k.a
>Mr. Maddog

Eric!!! did you get the STe stuff, the first time I emailed to your
second address it all bounced, but on a second attempt they never
bounced, but as you dident respond then?, well did you get them ?

1220. M_Player v 1.30 released

Newsgroup: comp.sys.atari.st
Date: 1996-07-23 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <960723Z175130.839dave@mbha.demon.co.uk>
Source record: 141501

What's M_Player?

It's a multimedia player for the Atari Falcon and TT. It runs in 256 (mono display) and 32768 colour modes. It needs a Crazy Dots or Nova card for the TT.

It plays .AVI (with sound!), .MOV (with sound!) and .FLI files.

If I had a pound for every time someone has said it couldn't be done... but Guillaume Tello has written a program to do it. And it is very good.

Uploaded today to ftp.cnam.fr, ftp.uni-kl.de, 42BBS (01256-895106), Chameleon BBS (01454-881095) and the Tavern BBS (0181-445-6514). Look for MPLAYR13.ZIP.

Also available by UUEncoded email, drop me a line and I will send you a copy.

It's shareware so don't forget to register!

Yes of course,
As far as I know, Torsten's project only runs on MegaSTf with no modification
and on STf machines with a small adapter board. I don't think it will run
on machines other than those.
In a MegaSTE you have the VME bus so have a look on VME to ISA adapters
(unfortunately I don't know if there are some other than commercial)
It should not be difficult to adapt the MEGA4000 project to VME specs but only
Torsten can tell it.

You could try setting everything up except the time zone using
ice_net.prg. Then manually edit that option in the ice.net file.
That's how I got round it.

Best wishes

Neil

>>> a lot faster then Mintnet and a lot easier to use for Mail , Ftp
>>what nonsense !!!! mintnet is MUCH faster than Oasis135 (and also supported)
>>NOS which forms the backbone of Oasis v1 has not been updated for years.
> Since when has Mint been faster then a Gem program ? Nos042 and NosPop

Mint and GEM are not comparibles so I don't know what you mean here , equally
they are not even mutually exclusive either I have run mint WITH GEM ???

If you refer to some raw benchmark between ROM GEM and GEM.SYS then that is
not relevant to what I said or what was being discussed .. quite apart from
the fact that such raw benchmarks (AES redraws etc etc) do not take into
real world advanatages of multitasking which is especially relevant in a
network environment. You tell me how you get on with NOS042 with reading
news online (impossible) , whilst running 2 ftp sessions , a Browser and
irc client THEN come back to me and discuss matters further ..

> have you ever heard of those for starters ? As for Mint being

yes of course I have

> supported the only new thing in Mint is Mintnet 090 ! Not very
> impressive.

but more impressive that the only new thing about nos is someone compiled it
with -m68030 option about a year ago !!!

plus of course you ignore the fact that mint can utilise literally hundreds
of constantly evolving unix applications and tools whilst nos can not use
ANY external applications whatsoever. In fact just 2 or 3 messages back I
saw a announce that someone has kindly compiled and uploaded vim somehwere
oh dear I beleive nos has no such application i.e no means at all to edit files online ..

>>platforms<nos> about "lost" mail ,news etc as being self evident as reason
>>against the case for mail being "easier".
> Disregard the Pc version of Nos and let's talk about the Atari version
> and I believe the only people complaining of lost mail were primarily
> using a Demon account . Oasis can't take the shit if the Techs at
> Demon can't configure a Unix system properly !

yes it can , demons system IS configured correctly , the problem from atari
NOS is that it is not being updated to take into account changes in hardware
technology. you can say it is Demons fault all you like but it will not help

just like you cannot say it is XXX games softwarehouse's fault for not porting
there games to the ST that killed that market.

>>as for ftp well I dont think that nos's ftp supports 1/100ths of the options
>>available from ncftp . Certainly not regex,hotlists,auto login and saving of
>>default directorys amoungst other pretty essential features which save lots
>>of frustration if you have dialup net access. Furthermore I wouldn't advise
>>trying to run more than 1 ftp session with nos in whatever flavour (pc or atari)again no
problems with mintnet/ncftp.
> Use the set-up keys in Oasis for all your Auto logons . I haven't had
> any problems going to as many sites as I wanted in a row ! You seem to
> be getting the Pc version and the Gem version confused !

not at all . In a row or simultaneously I wonder ?? And you have not I see
put any discussion forward re other features and as far as auto-login is
concerned then you miss the point I am not talking about just setting urls
to frequently used ftp sites limited to no of free F Key slots I am talking
unlimited and built in function which is saved out on every access including
last directory visited.

>>or not bother with them at all ... there a mere cosmetic IMO most of the time
>>if you are only after information , if he is bothered about that then chimera
>>is available for mintnet.
> Chimera is the last piece of garbage I would recommend to anyone . I
> was at the TAF convention in Toronto anticipating finally having a
> Web browser for the Atari line . To say I wasn't amused is the
> understatement of the year . Think about it Xwindows , Mint and then
> Chimera all on a 1040 st ! That's the difference Oasis runs on all

of course not but who is using that sort of equipment these days !! For
a start 4 meg only cost about 20UKP which probably JUST about makes that
system useable but not exactly fun. However I see no way to use any WWW
from NOS shell .. there are more useable forms of those (lynx for example) for
Mintnet that run just fine on an ST.

> Atari's something that can't be said for Mint . The one program that

Yes but as it is completely without any extendeability i.eeas a self contained
shell you are limited by that denomination. I dont think this thread started
anywhere near this point .. but someone eposting that NOS (or perhaps Oasis)
was somehow faster than mintnet but then if you are using either of those I can
forgive you for not being able to follow a thread <G>, not which would fit on
a particularly machine configuration !! Of course I accept your point if you have a 1 meg
ST you are not going to get very much benefits out of mintnet
more than likely you should stick with NOS but my opinion is that you are
limiting yourself on BOTH counts . What I dont accept however is that you have
changed the paramters of discussion from which is best choice without
qualification to one of which best fits on xyzee hardware config.

> came out with potential was Duftp but where's the new version . Keep
> one thing in mind once Stick comes out with a PPP the game is over
> because this is the only program that gives all Atarians a chance to

> finally use their system for the Internet .

yes "as soon as" .. meanwhile I shall continue to use the system that delivers
those promises (albiet Linux68k now but previously MiNT) I think :-)

>atarians, but so far all the signs make it look pretty impressive, it
>is a definate goer and will be called "THEY THINK ITS ALL OVER" and
>have the abvious sub title ?? :), 3ukp an issue I belive and need a
>break even readership of 500 only due to the fact that all
>contributers are working for free etc,

As I am the publisher of the new Atari magazine, I had better say a few
words before things get a bit distorted :-)

Yes, there will be a new 60 page Atari magazine coming out soon, it will
have a glossy cover, but ordinary inside pages. It should be priced around
the 3 UKP area, but that is for UK readers. We will have to charge a bit
more for readers elsewhere because of the extra postage.

There is still a lot to be decided, and unfortunately I cannot say much
more for now, however I will be making an official announcement in the very
near future :-)

> I have no idea why they havent informed the actual Internet community
>yet, but expect to hear more about this soon as it is a goer :)

The reason for not announcing it on the Internet was because we needed to
gain backing and support from the UK-based Atarians, mainly for financial
reasons. Now that we are definitely in a go situation, we will be able to
make official announcements soon over the Internet.

There's no conspiracy or anything like that, we just had to keep things
simple for the first few weeks. And I promise to keep all readers of this
area fully informed of how things progress in the next few weeks.

But this magazine is not vapourware, it is real, it is happening, and it
will need your support!

Best wishes

Mike Kerslake

No, we can just get by without a new $2000 or more system every year
or two. Our systems suit our needs.

>market dynamics today, PC/Mac components are second nature and commodity. I
>don't thing that harddrives are manufactured less than a gig today. Memory is
>a commodity as well. Unless ST users are hardup towards additional resources
>which are standard on the Mac and Wintel world.

On an ST, one is hard pressed to WASTE 4Megs of RAM. On a Mac/PC,
the OS will waste that much by itself. An ST can live happily on
Mac/PC 'table scraps'. We needn't subsidize the lifestyles of some
Redmond Robber Barons.

Some of us have better things to spend our money on, and are
suitably served by our current hardware (and software).

Some of us have been in this state for quite a long time. We were
here long before PC's were capable of bringing us here and long
before 99.9% of the population could afford to be brought here
by Macintosh.

>
>Every platform has apps which run nicely on low memory and storage. ST users
>think that their platform is unique because of it. My take is because the ST

This is known as MS-DOS. It has nowhere near the functionality of
GEM. Admittedly, the clones have GEM, but noone ever seemed to
catch on.

The Mac/PC market is polarized between pathetically underpowered
shareware or system apps and mega-monolithic monster apps that
do much more than many users would ever need. In the Mac/PC realm,
the WordPerfects have pushed out all the WordWriters and
Pagestreams.

>is still on 80's apps which is mostly PD and not any real world apps that

Well, what do you do with your Mac (besides games) that you cannot do
on an ST?

>MAc/Wintel people take for granted such as family apps in the area of Encarta
>and Groiler. Atari Jihads think that their OS and apps is are more stable

This multimedia tripe are not apps, they are toys.

>compared to others. This asertion is perputrated by Atari Jihads in their
>fantasy land.

Well, the primary problem is that Mac/PC attempt to deliver an enhanced
feature set and oftentimes cannot deliver. Most people don't attempt
to take advantage of them. Save for the few 'toy' programs, most users
dont push their systems past the functionality one would find on an ST.

When you do start to treat a Mac/PC as you should: as something that
should have superior capabilities, all hell breaks loose. This is when
the famed Mac/PC stability issues come in and all the linux & NT advocates

have a field day with Win16/MacOS 'stability'.

This is good for you the reader? You like a mag full of adverts?
Surely you have mastered the art of reading sentences and not just
computer names and prices by now? Or is flicking through the ad pages
of MacFormat your equivalent of a teenage boy flicking through
Playboy?

>Last time I looked
>at STF which was a year ago, was more of a newsletter than a mag. With the Mac
>market increasing in the UK and MF growing, adding staff maybe needed..

True, the other mag Atari Review/World however was much better but
just like STF they got screwed by other people...

>As far as I am aware whats available on this side of the Atlantic is ST
>Informer, ST Report(a more diverse product)

I can imagine that you and Ralph would make a lovely couple, you're
just made for eachother.

>and Current Notes. Not much left of
>course but I thought that would change considering the praises of the new ST
>clones. Anyone purchase one? By the way Apple will be shipping their new
>$3000 200 mhz Performa 6400 with integrated suround sound and subwoofer..

I can assure you that running Papyrus (under MagicMAC) emulation on this new
machine against whatever your Mac WP equivalent is (native) would show
you what a beast the MacOS really is, if you see a bunch of Atari
programs running with MagicMac and the Mac equivalents then you would
see how pathetic we see your postings. I don't hate MAcs or anything,
I have a Newton and am seriously considering buying a Powermac but
hearing how you are so desperate to convince yourself that your Mac
was a good purchase and with the added fear that I might begin to end
up as ignorant as you makes me think twice.
You are doing your cause no good whatsoever, I don't think that you
have ever actually made a point in your life, you just make one sided
observations, which although being amusing to me, make your life look
decidedly sad. If your Mac is so good then go do something useful with
it instead of provoking people who have the sense to have machines
that do what they want, many people here just want to play the odd
game, word process and collect their email. The machines that they

have do exactly this and they have all the software that they need already, why on earth would they consider spending $3000 on hardware only to have to buy more software to do exactly what they wanted before, wordprocessing is no more useful in 16.7 million colours or with surround sound, 200mhz means nothing if you just want to bash a few keys especially as I expect your machine uses up as much of it's processing power just reading the keyboard as my ST has overall. Finally could you just explain to me why you have to continually dig at other machines, the similarities between the Atari and Mac OSs are very clear (except that one is fast and compact and one is so huge it needs to be loaded from a hard disk), why would someone who is so satisfied with their machine crawl around other groups reading posting just to take the piss, do you ahve a motive or is just that you are a very sad and lonely person? I really would like to know.

Your friend-Paul.

Thanks for the information :)
Must I have Midicom to be able to share the HD's? It's a little annoying to have to use the midi-port since I use midi equipment rather frequently (just about every day).
Is there any other way of sharing HD's between a Falcon and a Mac?
Otherwise It's ok just to send/recieve between LAN and Serial, even though it'll probably be a little slower.

Best regards,

Claes

A bit sensitive aren't we? I only wanted to know if they were coming
out. I've been waiting for Skyhammer since first seeing screen shots in Die
Hard Game Fan (back before they turned into total smegheads) so I was kind of
hoping it had a chance to be released. And since you mentioned previews of
the others... It's a bummer.
And I only mentioned the playtesting bit because the 'review' seemed
rather harsh on that point, but I figure if you know the game isn't going to
be released there probably isn't any reason to test it, tweak it, or improve
it at all.
But if you have to take offense, I can't stop you.

Hi again to all interested in the BTV and I.T.'s

This may of be of interest to some of you.
Due to the increasing rise of I.T's and BTV a course
on how to deal with these problems is now available.
The type of course is Special High Intensity Training, so all
information can be gained in the shortest amount of time.
A special introductory price of £125.00 for the full course
will be charged on the return of your application at the
beggining of the course.

Please note this isn't another cheap way to make money out of
you it's one of those things that we think is benificiall to
you all.
(The mumbling frogs will remind you of this once they've read
this message!)

The application form for the course will be posted tommorow.
Also course tutors, but you can probably guess already who's
trying to make money out of you! ooops! I mean helping you in
your moment of need!

Ade.

I appreciate it Mark. I'm sure many others like looking through your
preview pages as well. If the Jaguar shareware movement becomes anything,
then your pages will be great. Either way, they are an enjoyable time kill.

Thanks,
Rob

You have been infected by mumbling frogs. These creatures talk to their victim whilst asleep, making subliminal suggestions. After a period of time, the victim becomes convinced that the invisible turtles are out to get him.

This is a very subtle ploy, for in fact they _are_ out to get him, except that having publicly displayed an apparent psychosis, the victim is no longer believed at all, leaving the invisible turtles free to complete their hideous work.

Strange I was just about to post to ask the same thing.
I've heard aboout the CM8833 MkII but mine just seems to be
called a CM8833. Does this differ from the MkII?

If anyone has the pinouts for the RGB port could they mail them
to me as well.

Not when you consider the editorial content of the Atari mono mac
compared to many Mac mags... you will find that many of the mac mags
are just padding out.

>We in the Mac/PC world pay around $20 for 12 issues with full color 200+ pages covering
from
>digital video, multimedia, education, games, desktop publishing and the net.
>Calamus SL is more catchup than leading edge.
yeah, and compare the market share.. if you wanna play games such as
yours.. I'll go on and say.. look at the number of PC mags out there
compared to mac ones.. and look at the number of pages in these PC
ones compared to mac ones.

Don't get me wrong Peter, but I own a Mac too.. but please keep your
advocacy stuff to the advocay groups only.

Hi, the installation is very easy if you need only more ram.
By using the accelerator part of this board you have
10 wires to solder. For some people with the "solder-licence"
a work of one hour only. Follow striktly Blowup's manual!

>perform? Are there incompatibilities I should be aware of? I have an

I can't found some incompatibility. papillon, papyrus, texel, apex, neon
most of all demos and games are work very well.

>Atari Falcon in its original case, with a 14Mb memory expansion
>already installed; will things get too crowded in there? Thanks in

The FX-Board found his place on the internal expansions port.
So you have 14 Meg allready, i'm nor shure, i think you fx-ram will
used as EMS-Ram only. (I don't have a machine with 14 meg)

Ask Georg Archer..

The Perform of the modified falcon is very nice.
CAB needs half the time to show some pictures on screen..

regards, robert

Hi Gustavo,
I don't think that you have Linux68k.
I use Emacs 18.59 for MiNT. It may work as well under plain TOS, but I
really don't know.

Hi all..!

Has there been any NEW games released on the Atari ST/STe since SubSTation?
I remember Substation, Obsession and STarDust were the last ones I've
seen released? Is anyone even making games for the Atari anymore??

Just starting to get frusterated not seeing any s/w being released for
the Atari.. :-/

Got a Datel Express Mk2, but it seems to dislike running on my STe! Anyone know of this? Is it an insurmountable problem?

I have some strange format disks that I treied to copy, but it too 6 hours (yes, you read that correctly!) to copy and it still didn't do the trick!

Please reply by email if poss.

Thanx...

The keyboard and the mouse are both rooted through the one cable from
the keyboard you could first try opening the keyboard and the main
case and looking for broken joints in the connections of the socket to
the mother boards if you can't see any then seeing i guesss your in
the us send it to Toad computers and they will probably be able to fix
it for you.

>
pin 1 has a little yellow arrow pointing at it on the mother board to
connect the drive, lay it flat circuit board down on the floppy disk
drive and connect the cable straight across, looking from the fanside
of the falcon (the front) the cable should be coming out of the
right side of the connector and it should be connected so the cable
is coming out of the bottom of the connector. This is valid for my
falcon 030 and my toshiba ide drive but everything should be
standered. If you are unsure get somebody experienced to do if you
fry your new expensive drive you only have yourself to blame
hope this helps

1272. M_player

Newsgroup: comp.sys.atari.st
Date: 1996-07-24 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <960724Z225052.965dave@mbha.demon.co.uk>
Source record: 141342

Greetings

Further to my last post (just yesterday) about M_PLAYER, I should make the point that it's a multimedia player specifically for the Atari TT+graphic_card and Falcon.

It runs in 32768 colour mode, but if you've got a NOVA or Crazy Dots card, it also runs in 256 colour mode (the True colors files are then turned into mono).

M_Player plays FLC files too and FLI/FLC CRAM8/RLE8 are not mono even in 256 color mode.

Sorry for any misunderstanding caused by my original post... I don't think I would make a very good tecchie!

>
>If I had a pound for every time someone has said it couldn't be done... but
>Guillaume Tello has written a program to do it. And it is very good.

I just tried this, and it's completely awesome! Playing files with sound
sync. enabled causes some skipped frames, but turn off the sound and
watch the movies fly!

I'm gonna send off my registration fee right away.

Suggestions:

(Falcon) Switch to True Color resolution automatically, so I don't have
to manually switch resolutions to run the program.

Have an option for looping, so the movie keeps replaying until, say, a mouse
button is pressed.

Everyone: Get this program and REGISTER! Maybe more codecs will be
supported if the author gets enough support.

WAY TO GO Guillaume!!

> Gustavo
>
The only problem I currently have is that the EMS driver which breaks the 14 meg barrier hasn't been finished yet. This is very distressing to me, especially since I really wanted to go to 20 megs. To me, the RAM expansion is essentially useless without full implementation, I already had 14 megs, now I have 12.

Another problem I had was flaky performance at 36 and 40 MHz. Since then I have moved the case fan to the end of the FX near the center of the machine and now 36/36 mode seems pretty stable. I just need to get a smaller fan with a higher cfm and should be stable at 36. 40 I don't know about. I've gotten it to run, but rarely for long. The FX at 36/36 in 640X480X16 video seems as fast as a TT with FastRAM to me. Unlike many others, I don't seem to have problems related to NVDI (I use 3.01). My machine also runs just fine with TOS 4.04, maybe even better than with Magic 4, you just need to turn the Blitter off.

I'm not impressed with the BlowUp video performance in 800X608X256 color, though. I can't seem to get above 35 kHz horizontal and 60 Hz vertical. This is a result of the 33-34 MHz pixel clock limit in 256 color mode, which someone may be able to explain better. It seems to be a limit of the Falcon video chip, I guess you can only overdrive it so much.

The FX is definitely a Best Buy for those who need marginal speed increase with backwards compatibility, video enhancement, and an upgrade beyond 4 megs. It's even a better deal if you can install it yourself (I did a better job than Toad (of course, I've already installed a Speed Res and had the Falcon Ray put the FX in to work from). If you already have video enhancement, 14 megs, and have to pay for installation, it's not such a great deal.

I must agree that Georg is very straight-forward and helpful, I just wish he could get the EMS working.

Good luck,

Dan

I am not sure why you can only use four lines. Why not use the same method
that got you those four lines to add some more?

Most Unix systems will have an editor of some sort, you could use that.
Or just echo some text into the file.

I use MiNTNet to network a TT030 and a MegaSTE via the LAN port. It seems
to work fine at all speeds upto 115k2, and theoretically higher. But the TT030
LAN port won't go any higher. I cannot imagine where you heard that MiNTNet
is limited to 28k8.

There needs to be none: this is Usenet.

Ali was whining about post content. In this domain, the technology
exists to filter out anything that one might find 'distressing'.
Ali should learn how to use it if he finds content here so
'distressing'.

...and if all else fails: if you don't like it, don't read it.

What's your evidence for this? The majority of Oasis users are Demon customers, so it's pretty obvious that proportionally more Demon customers would report problems. In terms of bugs, Oasis' track record is far from shining.

PS> in no way competes with the ones such as MacWorld that have
PS> moved into other features such as multimedia, digital video
PS> and internet/browser content. Current Notes is nice if you
PS> still like the past.

Peter, I believe you are being quite unfair here. About the only similarity between the old & new Current Notes is the name & Atari-computer coverage.

The old CN was a great Atari hobby magazine that got caught up in griping about the negatives of Atari Corp. over & over & over. While I liked the coverage of Atari computers, the bah-humbug editorial of nearly every article got to me, & I dropped my subscription.

The new Current Notes is quite different. It looks very different, has many new contributors, and has a new focus on 'new' issues, such as the Atari emulators, multimedia, and the internet. I have yet to see a negative (or much of any!) word about Atari Corp. - yet the reviews of products contain pros & cons of the products reviewed - it's not a rah-rah cheer fest! :)

Due to the much smaller market, I imagine they have some difficulty doing big bucks hardware reviews, etc. But in the last issue they reviewed several (7, I believe?) text editors. The info on internet has been very informative, for people using any platform. In past issues they discussed digital cameras, color correction, serious art programs, and so forth.

I think you do a great dis-service to the staff of the new Current Notes, to speak ill of them - while not even looking at their magazine! I have subscribed to both the old & new versions, and I assure you, they are very dissimilar. IMHO, you are in error.

Whatever your opinion, and whatever it is based on - I for one think the staff of Current Notes does an excellent job of covering new issues & products pertaining to Atari computers and modern issues - most certainly not the past!

>
>What it is I am interested in buying a removeable harddisk for use on both my
>TT, Falcon and PC, the qquestion is which one?

Any of them will work as far as cross platforms stuff goes... Obviusly
you need a SCSI equipped PC but cards can be bought for around 40 UKP
apparently and the extra load off of your processor is more than worth
it.

>The Syquest seems to be faster, easier to use (treat it like a harddisk),
>they have a better name, etc.

Faster yes, easier to uuse-NO! The Zip is treated just like a floppy,
no speed up/down or levers, just an eject button and it's ready
almost as fast as a floppy (~0.5seconds).

>The Zip seems cheaper and to have more backing from others.

Very cheap EZ's are about but as you may know the EZ135 is no longer
being made after september and the EZ230 may also not quite make it
due to too high production costs. The Zip is slower, has no power
switch, needs termination power (ie another device in the SCSI
chain/power from the joystick port if you use the Link or similar
adaptors, it is however smaller, more robust like a floppy, has a good
future as it is being pushed as the floppy replacement. I opted for
the Zip and have no complaints whatsoever, if you want to carry your
data between locations often then get the Zip but if they are close
together and you're not woried about discontinuation get the EZ,
dropping an EZ cart is like dropping a hard disk, dropping a Zip is
like dropping a floppy.

>Anyone have any ideas or suggestions to make?

See above :)

>I allready own an Insight Floptical so don't want to make such a mistake
>again. My current favourite is the SyJet, but I am willing to be persuade

Go with our guts, they are both great machines but also are very
different, see which one suits you then go for it.

I wouldn't deny that Calamus is popular in its small niche. Popularity
does not make it good, though.

It's VERY difficult to learn to use, compared to most other capable
DTP software I've used, and (perhaps more importantly) its support for
industry standards such as PostScript is laughable.

> welcome to the 90s, SinClap - ever hear of Apex Media, Expose,
>TruePaint, Cubase Audio Falcon, CoNnect, Papyrus?
Let's be realistic: CoNect and Apex Media are great. CAF is OK s/w let
down by shite h/w. Papyrus is OK, but lacking in some important features
(not even a word count FFS). TruePaint is junk. I will not comment on
Expose as I haven't used it.

>article that suggested 8 megabytes for a PC if you're running a word
>processor, and 16 megabytes if you want to run Windows '95! Excuse
>me? 8 Megs for a WORD PROCESSOR?
As memory prices drop, this is becoming less relevant. But 10MB just to
run Netscape is pushing it a bit!

I put the information that I used to upgrade my Atari 520ST to a 4Meg machine using 4 1Meg x 8 SIMMs. You can see the info at

www.netusa1.net/~jahronch/welcome.html

I decided that www was the best place for this, as I can keep it up to date, in case anyone finds any problems with the current documentation.

Please realize that I used this to upgrade my system. I was successful, although a bit afraid that I would plunder my machine. It took a bit longer than 45 minutes, as the documentation states. More like a couple of hours.

Enjoy your new hardware enhancement adventure.

Instead of simply pointing out what was wrong, I thought it might be
novel to show what it should be :)

http://www.atari.com

The first statement between < and > is the actual link to go to,
anything after > and before the next wil be highlighted, so what
could look as good would be,

To the ATARI pages.

The word "ATARI" would be highlighted and anyone clicking on it would
be sent to the ATARI pages,

Hope that helps :)

Cheers.............!ynoT

From: Rod@ivecoft.demon.co.uk
Message-ID: <838297515.5853.0@ivecoft.demon.co.uk>
Source record: 141168

I have read the posting about the Oasis 2.05 troubles and can sympathise. I have been a beta tester for 1.35 and now 2.05 and have the same problems.

machine setup:-
1040 STe with 4M ram
MagiC 4 Ease NVDI 4

Packet size error messages.
Having spoken to Phil Yeadon I editied the ice.net file (using ice) to ensure that the packet size was "correct". Sorry I cant remember what it should be and I'm writing this from work. If you want you can write to me and I'll tell you.

Spinning time zone selector
Yep. It does it for me also. Phil & Dave have been informed.

No post/newgroups/ftp/finger. Failure to logoff
Yep. This one STILL causes me problems. Its APITA. Can I suggest that you monitor the logon process. When you dial in and Ice goes through the logon routine, check the Dialer window. There will be a line that tells you at what speed you are connected to your provider.
Everytime I have troubles like this I have connected at 9600 bps. When (on the rare occasion) i get connected at 14400 I have no trouble at all. Phil has suggested that its "the bug" with the Atari serial port and that a few people have used HSMODEM7 to clear it. I have yet to get this so I cant comment. However..... Dave is currently writing a prog that will set up the serial port before ICE takes over control. Watch this space..

good luck

Try (in Nos) "hop check steil.wintermute.co.uk". Originally this
revealed a circular traceroute for me. I emailed the postmaster at
wintermute and this was eventually fixed. My emails still fail to
reach their destination though!

In any case I would persist in hassling wintermute's postmaster. I've
been doing so for ages - if enough of us do it, something might get
done. I don't think this one is down to demon.

>this problem. Is there a solution or workaround?

hmm ... I dunno, I better go look!

fde_trnsfr() in the code section below returns true on success and
false on failure so it must be failing. The most likely cause of this
will be simply that there is not enough disk space available in the
destination. To confirm this create a file called SETUP.LOG in the
same folder as SETUP.PRG and run it again. The log() functions below
write plain text into SETUP.LOG if the presence of that file is
detected. Looking at this file after, you will then see exactly where
it failed - check the free space on the "failed path".

```
log("copy() - built %s & %s, to window ...\n",src,dst);
pug_obstr(wd,wdi,F1SRC,"%s",src);
pug_obstr(wd,wdi,F1DST,"%s",dst);
fd_clear();
log("copy() - fde_trnsfr() ...\n");
r = fde_trnsfr(FD_CMD_COPY,src,dst,true,
FD_TMDT_SRC,FD_ATTR_SRC,FD_OVER_ALL
)
;
log("copy() - fde_trnsfr() done\n");
if (!r) {
log("copy() - operation failed\n");
form_alert(1,"[3][Copy Error][Fatal]");
break;
}
```

Another much less possible cause is that fde_transfr() is trying to
overwrite a file with read-only attributes.

It may be possible, though I doubt it, that the path tree is so deep
the filename is getting truncated and consequently being made illegal.
Again, the SETUP.LOG contents should make this apparent.

It is possible to perform the actions performed by SETUP.PRG by hand.
See the relevent batchfile (SETUP.UK, SETUP.FR, SETUP.DE for english,
french, german respectively). The documentation explains the "relative
path" concept used by the batchfiles.

I have a MagiCMac web page up at http://users.aol.com/zan660/mhome.htm

I will be glad to put up your software and or a paragraph describing it on my web page, check it out! At the moment I have two files up! If you want your software up on the web email me! Where's the catch? The catch is.....the application must work under MagiCMac! zan660@aol.com

Likewise, I would be interested as well. However, I think I read somewhere that the maker is currently testing a 60MHz version of this board and will make an announcement concerning it when tests indicate if it is stable.

Oh, and by the way, it is for the Falcon030 and is a VERY small, slim pc board (something like the Wizztronics 16 Mbyte RAM upgrade plugin board, if you've seen that).

>There's also David Munsie's Asteroidia, shareware, but pretty good.

I released Island Strike on this months ST Format cover disk, Apart from that, I also recently made VidIgrid 1 and v2, a complete rip off of the jagcd Vidgrid game, mine has obvious limitations as it works on 1meg FM as apposed to JAGCD :), but it does have Video clips that are randomly cut up, and when you move each part, it is still plaing as a seperate video, get VidIgrid 2 for best results, NOT shareware as stated by STF but Freeware,
I am currently working on a game to be released at the upcoming ATARI shows, its a one meg FM game, but enhanced sound if run on a STe, it also runs on the Falcon and work is under way to greatly enhance it for that machine, (this is slightly hindered by the fact I dont own a Falcon, but I have friends <smile>)

Visit my web page for info on the only 2 player pacman clone that allows split screen massive play area fast action fingy:), H.E.R.O. freeware release and many other game titles, most of which have either appeared on cover disks or been reviewed in magazines,

Including the above titles and many other none game releases I have well over 50 releases to my name :), but to answer your original question, YES people are still making games, I for one am making games for the ATARI as long as people still play them :)

BTW you mentioned Substation and Obsession (the latter being the best game seen on any atari..ever)
Well UDS the authors, now have a site on the internet and you can find out more about existing ATARI titles and what UDS are up to now http://www.uds.se

Cheers.............!ynoT

: I've just got hold of 1.3 of MG-FTP and tried it out.

: It looks really, really good and I just wondered if 1.3 was the latest
: version? Is it still being developed? And where can I get the latest
: versions?

: Thanks for any info,

: Gary.

Gary,
This is a good question...
The latest I can find is 1.03, and it doesn't
work with Geneva. I can't get any of the MG-FTP programs to
work in my desired set up...although they seem to work quite well
under plain TOS. I'm guessing that since the program is KeyWare,
one could register the software and have access to later versions.
I currently don't use MG-FTP because I've not registered it,
and I've not registered it because it doesn't work under Geneva. Perhaps
when I get some extra cash I'll register it just to see if there are
later versions that are Geneva friendly. Good luck in your search...

Brian

What's so modern about TOS? I have heard enough to comment on Calamus. Such as a screwed up cumbersome interface and lack of support for postscript.

> DMC's original North American office was small - but not their
> German ones, where the program originates. It's very popular in

Just one country? Interesting that Atari users would buy Macs to run magicmac considering that the Jihads have labeled the Mac as inferior despite standard 16 bit sound, 16 bit color, Quicktime, standard CDROM, wealth of CD apps, Netscape, cyberdog, opendoc, PowerPC and future.

I understand that there are 040 TT clones. With these available, why buy a Mac?

> still quite a few Ataris out there running Calamus, in Germany
> and elsewhere. And speaking of "vapourware" - how about that new
> version of CorelDraw for the Mac? :)

Ask Corel about it. Meanwhile Mac users have other choices like Claris Draw.

> valuable.

Welcome to 96, ever hear of Lightwave, Claris Home Page, Adobe Premiere, QuickTime VR, Adobe Photoshop, Adobe Persuasion, Strata Studio, Strata Media paint, Strata Video Shop, Macromedia Director, DigitaTrax, Midi Translator pro, Strata Vision 3d, Freehand, Web Animator, Web Arranger, Web Page construction kit, Webstar, Adobe Site Mill, Adobe PageMill and Internet Phone.

There is nothing wrong with 80's apps but I am ammused how jihads state how much superior the ST platform is because memory and HD space is considered swear words because 16 megs is considered standard.

> As for your assertion that every platform has apps that run in
> low memory and takes little system resources - I recently read an

> smaller when running in lower resolutions!)

So? Are you aware that PC's come standard with 8-16 MB? If you are running a memory hog of Office, 16 megs is needed. But have you seen what Office can do? However, on the mac side, ClarisWorks, WriteNow and Nisus are low memory apps considering the functionality in these apps and 8 megs will do.

The article that you referred to, what Wp was used?

However, Atari Jihads think that more memory is bad. In the real world it's progress. The jihads think the industry should stagnate and be like the ST platform were things remain the same from the 80's. 16 megs is commodity and standard like when 48k on the Atari 8 bits was considered high.
>

I don't live in Michigan and in no way connected to the militias. Nice try. Yea, I saw that militia flick on C-span about a gov't conspiracy to implant communication devices for monitoring and the invasion of foreign troops which have been going on for decades for training.

Is CDROM standard on St's? Have the developers writing CDROM apps specificaly
for the ST? I have not seen any listing of ST cd titles?

Atari was a pro with vaporware and wrote the book on how to scew people.

$1500 for an 030 in 1996? You can put together Pentium/powermacs for that
price and use 1996 apps.

> nobody's buying it.....I'd highly suggest putting down your
> cheerleader mags and read the Wall Street Journal for some sobering
> news.

The current management cleaned up the mess from the last one. Sculley's
policies are a question mark. Many argue that he should of Licensed the Mac OS
on his watch. And for Jobs...If he was left in charge, Apple would not exist
today. He is an arrogant bonehead.

Apple's current management is restoring the company's fortune by taking
decisive actions such as reducing the value of the slow moving Performa
inventory. Apple's Powermac line has been doing fine and it showed in the last
quarter results. Apple's management took decisive action to make the Powerbook
right. Would the Tramiels done so?

Apple lost $32 million on sales of $2.2 billion with a backlog of $500 million.
The asertion that there is no demand for Macs is absurd. These results are an
improvement over the previous one where Apple took a huge charge on Performa
inventory.

Rich is a pretty cool-headed guy is an understatement. He cries wolf on many instances like complaining to ones sysadmin who in turned basicaly told him to grow up and quit being a baby. I don't know anything about Roger's conduct or his alleged racist comment but in no way I have participated in this conduct.

Excuse me.. I am a bully? No sir, I am a realist. Yes I participate in Amiga groups because of being a user of the Amiga. Amiga and ST users have alot in common for making un true statements about other platforms and being simply arrogant. Nothing wrong with reality checks.

> Even if you were "debating", comp.sys.atari.st is NOT the place

> you limit your flamebait to.

He he he.. You should practise what you preach. Debates happen all the time in this area. The issue I see is that you and the Jihads do no like anything remotely negatively said about the ST but saying how bad the other platforms are.

>Can anyone let me know the procedure for creating a Falcon CD-ROM?
>
>IE, what software we will need, hardware etc.

You do not need a Falcon030 to write CD-ROM, I think an ST should theoretically be able to do it, but it may not be fast enough. We regularly write CDs using our TT030 and Falcon030.

Hardware:
Yamaha CDR100 4x speed CD Writer. This is the box that writes the CDs. You can also read CDs with it like a usual CD-ROM drive. There are many other CD-Writers available, but you should check that the driver supports them before purchasing one.

Software:
I think there are a couple of different CD-Writer software programs available. Soundpool sells one such program.

Once you have those two items, you can start writing CDs. The only other requirement is a big hard drive to fit all the data on ready to go to CD and as fast hard disc driver as possible (e.g. HDDriver).

Why should the Mac rags have 500 pages? 200+ pages is enough, unless you want to be like a Computer Shopper.

> As for the cover CD... tell me truthfully, do you ever look at the

Considering that Mac Addict has only published one issue so far. No, I have not used all and do not intends to do so. But there are a lot of valuable and useful goodies for all. As for the Demos, i do not need to instal on the HD just start the demo from the CD. Marathon III rocks!

steil.wintermute.co.uk definitely exists (as does stanley.wintermute.co.uk).
I don't think it's anything to do with Demon, and I doubt Wintermute would
be unable to deliver mail to one of their customers for two months without
noticing, so maybe it's a local configuration problem. Exactly what does
the error message say, and which machine does it come from?

congragulations on your upcoming nuptuals, Danny! Life's too
short to spend by oneself, so I'm glad that you've found your life's
mate.

Now if only I could find someone - well, if not, at least I've
still got the guitar and the Falcon! :)

again, since you have NEVER USED CALAMUS, and have NEVER USED a
MODERN TOS SYSTEM, you are in no position to pass judgement on how
well Calamus works, therefore your opinion is worthless in that
regard.

s > Shades of WordPerfect here. WordPerfect is on their third

s > you are stating. I supose when you are running a two person
s > operation, you have bottomed out and can only go up.

DMC's original North American office was small - but not their
German ones, where the program originates. It's very popular in
Europe, particularly Germany - in fact, one of the reasons MagicMac
was created by ASH was that Atari users could migrate to a Mac
system without having to eat their software investment in Calamus
(oh, and you should see Calamus SL running on a Mac LC575 under
MagicMac - runs like a scalded cat, much faster than Quark). They've
been way more than a two-man operation for years.

s > Atari roots...I suspect many of the Atari Calmus users have
s > upgraded to Windows to begin with. Also this new version is
s > vapor.

still quite a few Ataris out there running Calamus, in Germany
and elsewhere. And speaking of "vapourware" - how about that new
version of CorelDraw for the Mac? :)

s > perputrated by Atari Jihads in their fantasy land.

welcome to the 90s, SinClap - ever hear of Apex Media, Expose, TruePaint, Cubase Audio Falcon, CoNnect, Papyrus? These are SOME of the programs released in the last few years. There's still quite a few production houses in Europe which are still producing new software. And there's quite a bit of PD/Shareware still being produced out there, as well as upgrades to some of the more powerful programs available (I recently got the upgrade to the GEMview package, 3.16 - Dieter Fiebelkorn is great at maintaining and improving this little jewel). Besides, SO WHAT if we're still using 80s applications if the applications still do what we need to do? The computer, no matter what brand it is, when it comes down to it is still a tool - and if that tool proves to be useful, it is still valuable.

As for your assertion that every platform has apps that run in low memory and takes little system resources - I recently read an article that suggested 8 megabytes for a PC if you're running a word processor, and 16 megabytes if you want to run Windows '95! Excuse me? 8 Megs for a WORD PROCESSOR? The average person shouldn't need that much memory for a word processor! I'm currently using Edith Professional to prepare my articles for CURRENT NOTES as well as day-to-day stuff, and that can run nicely in a 2 megabyte enviroment (including the operating system in memory). And 16 meg for an operating system? Give me a break - on average, even with all my system enhancements like NVDI, Geneva, and Neodesk, my operating system requirements RAM-wise is less than a meg and a half! (Even smaller when running in lower resolutions!)

Atari Jihad? Much better than the Macintosh Militia, consisting of a party of one, Peter Sinclair-Day - and just as mistaken and crazy as its Michigan counterpart (not to mention using its same disinformation tactics). Better watch out for them black helicopters full of Russkie Soldiers with the UN, err, I mean Fuji symbol on the side of their helmets that are coming to take you away....

s > Is the Atari Falcon still $1399 for a 4/80 config? That kind
s > of money buys functional Powermacs and Pentium systems. I
s > MEAN systems with CDROM to run the cool stuff. I suspect in
s > the Atari world, cdrom's are to be drooled over considering
s > that feature is not supported..

Dan Dreibelbis, Atari CD-ROM user since 1994. If you can actually read rather than post your flame-bait, Atari users have been able to access CD-ROM for a fair bit of time. Roger Burrows developed EXTENDOS, a wonderful driver program for running a SCSI CD-ROM drive on your Atari (and, I must add, gives excellent support and comes up with constant updates to his programs) - other SCSI drivers for MiNT and MultiTOS have existed prior, though not as elegant and easy to configure as ExtenDOS. System Solutions has likewise developed an interface that allows IDE CD-ROMs to be

connected to the cartridge port. There's now around 40 different CD-ROMs that are Atari-specific (I just got hold of the new BIRD OF PREY CD-ROM of Falcon software from Toad Computers, and it's GREAT - the biggest collection yet), there are also drivers from HOMA and ABC Solutions that allow us to utilize titles like Groliers, Total Body, TIME Almanac, Video Movie Guide, and Funk and Wagnalls Encyclopedia. Add to that the thousands of graphics and text CD-ROMs and you have a wonderful base of information to work from! Oh, and did I mention that I also can play audio CDs on my Falcon while I work on it (thanks to Alexander Clauss' CD-PLAYER), and can choose my selections from the desktop? (Oh yeah, and should I mention that Atari pioneered the CD-ROM drive back in the 80s with the CDAR? Sure they did nothing with it, but it WAS a first...)

Falcon price? Dropping all the time - the lowest price I've seen so far for it has been $769.99 US for a 4 meg, no hard drive C-Lab Mk 1, from Computer Direct in Alberta. With the price of hard drives dropping, and the many used peripherals out there that the Falcon can use (like VGA monitors) one could arguably put together a nice functional system for around $1,000 - 1500 US.

s > Those boneheads at Apple(maybe not today) managed to grow the
s > firm past $10 billion annualy, allocate appropriate resources
s > for R&D and still come out with cool stuff.

I'm talking about the CURRENT boneheads (Jobs, Wozniak, and Sculley were not boneheads, to make it clear) who have posted the biggest losses in the company's history (what is it, around $396 million in the last quarter I heard from the last report), AND have a severely overstocked warehouse full of Macs they can't unload, AND have had problems with quality control on Mac Powerbooks, AND have told their shareholders that they'll be expecting operating losses through 1997 and not to hold their breath waiting for a dividend to be paid? ALL OF WHICH HAS BEEN REPORTED BY REPUTABLE MEDIA? Is this any way to run a company? Not to mention losing their market position severely in the last few years. And you accuse Atari users of living in fantasy land and coasting on past glories, you hypocrite? Get a grip. Apple DOES put out cool stuff, but if nobody's buying it.....I'd highly suggest putting down your cheerleader mags and read the Wall Street Journal for some sobering news.

s > My main detractor initiated my response by making unflattering
s > comments about my mom. I never sent anyone a flaming email.
s > You need to get your facts straight.

let's see, who do I trust, Rich, who's a pretty cool-headed guy, or SinClap, known troublemaker, disinformationist, and mud-slinging artist? Decisions, decisions.... Remember that Roger Sheppard got a warning from the government of New Zealand for net-abuse, one of which was sending me threatening e-mail. (If I also remember correctly, you were one of the few people <two?> who stood up for

Roger after he made his infamous racist comment that got him into
hot water, claiming free speech).

s > As for your difinition of nettiquette and net-abuse, any sane
s > sysadmin would consider this a debate.

coming from somebody who has proven himself certifiably INsane.
You're more the school bully who comes onto the playground and
pushes around people because you have some insecurity. You've been
displaying this behavior in these and the Amiga forums for the past
few years, and quite frankly people are getting tired of it.

Even if you were "debating", comp.sys.atari.st is NOT the place
to hold a debate - this area is for Atari users to trade ideas and
help each other out, NOT for idiots with chips on their shoulders
and no life to engage in dick-waving contests ("Hi, Dick!"). I
believe that there ARE .advocacy areas where you can debate and
flame to your hearts' content, which scores of people have requested
you limit your flamebait to.

> Remember, we survived Roger Sheppard (another infamous
> anti-Atari net abuser who wound up putting his foot in his
> mouth once too often - wonder where he went?). We can easily
> survive YOU.

s > Sounds like I pinched a raw nerve.

sounds like you don't have a leg to stand on.

And, so what? New Atari magazines will continue to be released too.

>issue is 112 pages plus a CD containing 650 megs of stuff. Price is $29.95 for
>12 issues annual with companion CD! I found it on the magazine section.
>interesting, I could not find Current Notes and ST Informer..
Peter, we all know that the Atari is a niche market... so why do you
keep wanting to remind us about it? We enjoy using our machines as
much as you enjoy ranting and raving in the Atari groups.. our
machines do everything we need them to do so why do you feel the need
to push us all into abandoning the platform?

Look, I own a Mac too and like using it.. I also love using my Falcon.
I do however believe that the Atari rags were much more fun to read
than any of the Mac ones. Most of the Mac ones are just padded out
with rubbish. Even for a niche market, the half size Atari mags are
quite a lot.. think about it.. compared to the Atari market size, the
Mac mags should be 500 pages per issue or thereabouts. ;-P

As for the cover CD... tell me truthfully, do you ever look at the
whole CD every month? Do you ever need all the software on there? Do
you really install all the 10Mb games demos every month? Most are not
even worth the media they are put on!!!

>> advocacy stuff to the advocay groups only.
>Advocacy, no sir..
I insist that you do take it to the advocacy group...

I would love to see the Underground come into something good.
Although I'm not sure how they would distribute stuff. I guess the easiest
way would just have everyone buy the JagServer. I'm not sure how much it
would cost for a small group to publish CD's.

1322. Seeking Redacteur Users

Newsgroup: comp.sys.atari.st
Date: 1996-07-25 00:00:00 UTC
From: Doug Finch <76337.1067@CompuServe.COM>
Message-ID: <4t7ohe$7gg$1@mhafn.production.compuserve.com>
Source record: 141283

Users of the word processing software Le Redacteur are
seeking others who know, or want to know, more about the powerful
French writing/editing program developed by Etilde (formerly Epigraf).
Looking to hear from experienced users and novices alike to exchange
tips and tricks, hear about how others are using Redacteur,
integrating it with other Atari ST-compatible software, etc. We
want to incorporate questions & answers, tips, information about
existing versions of the software, etc., into a working FAQ
(Frequently Asked Questions) file, and perhaps a newsletter or
periodic tip sheet distributed via Internet mailing list.

We're anxious to hear from French and other European users who might
have some professional experience with the program; Redacteur was the
accepted editing software in a number of French newspapers and
magazines when it was first released.

If you have comments, suggestions, a helpful hint, a unique (or
mundane) application for Redacteur, or just want to learn more about
the program, please e-mail Joseph Hogan at the following address:

smokin@libertel.montreal.qc.ca

Hope to hear from other Redacteur users soon. No input is too
trivial for our fledgling group. Thanks for your interest.

In response to the message and reply below, be advised that Santa Clara, California, where B&C Computervision is located, is 400 miles and an eight hour drive from Los Angles. Besides, B&C os not much of a store anymore. It's about the size of a large walk-in closet, and it's open only three or four days a week. All they have is old Atari stuff on the shelves. Most of its business is mail order. As we all know, there ain't much left of Atari. Save yourself the aggravation and get a Mac or PC with Windows.

I know of at least one in California, B&C Computers in Santa Clara. 1725 De La Cruz #7, 1-408-986-9960.

I believe STeve's is also located in California; but don't have the address handy.

Source record: 141292

hello,

i have MiNT + mintos (syslogd mainly) + mintnet on my megST4 w. 30meg HD..

i usually launch gem under mint, but i had the
same pb when using vconsd...

problem is, the console output (from syslogd i suppose) keeps
garbling the desk screen, starting from the bottom. :(

i.e. : "serial line 1 connected", when pppd gets
connected. :<

I'd really like to have those messages in a dedicated -
iconifiable - window, exactly like under X. is it possible ????
without using X off course-- i don't need that and BTW i have
no room left on my disk.

TIA

Yep..That is true.. A new rag has come out called 'Mac Addict'. The first issue is 112 pages plus a CD containing 650 megs of stuff. Price is $29.95 for 12 issues annual with companion CD! I found it on the magazine section. interesting, I could not find Current Notes and ST Informer..
All color with little advertising.

For mono icons in your DESKICON.RSC file, just use one of the PD programs
like Icon Juggler, or that PD resource editor (forget the name). If you
want to add icons to your colour DESKCICN.RSC file (which, BTW, has nothing
to do with MiNT) you would be best buying Zoom!, the icon editor. I think
Dr. Bob's Icon Draw (or similar name) also works well for this and is
shareware.

Isn't CAB FreeWare (I've never tried it)?
If so, I have both JPEGD interface code (by a person on the net, can't
recall his name at the moment) and _very_ fast GIF decode, and display
code (my own) somewhere around here... ;-)

I have fast ordered dither code for both colour and greyscales, but I've
never bothered extending the Floyd-Steinberg code to handle mapped colour,
even if it should be rather simple. Does CAB do colour F-S?

Actually, I recall sending some of that code to a person who claimed to
be in contact with the CAB developer a few months ago. I don't know why it
hasn't been included yet.

Message-ID: <dogmeatDv4u9C.Js@netcom.com>
Source record: 141187

All:

I am selling my Atari 1040ste. It was one of the last built, has
TOS 1.62, 4meg RAM and a new keyboard. It also comes with an old model
1224 4/16 color monitor.

The computer is in great shape and comes with all original books
and box. It also has all its components, i.e. mouse and TV hookup - both
never used.

The monitor also has its box, but neither the box or the monitor
are near mint like the computer. The monitor works fine except that the
sound goes out after about 30min - some kinda short, I guess.

Yours for $150/best offer. Will throw in a single sided disk
drive and some game software for free. Postage will cost you!

There is a POP3 client for MiNTNet, I can dig it out and email it
to you if you wish.

[..]
>For me at least, this problem no longer occurs but mail still fails to
>be delivered.

I got exactly the same result about five minutes ago, but that doesn't necessarily mean that mail's not going to get there. stanley.wintermute's primary mail exchanger is mailhost.wintermute.co.uk, so whether or not there's a direct route to stanley.wintermute should have nothing to do with it. All the routing loop implies to me is that they're not currently dialled up, so mote.wintermute doesn't know how to get there and bounces the packets to pipex-gw.wintermute. I would guess that mote.wintermute has a default route pointing to pipex-gw.wintermute, and a route to stanley.wintermute only exists when that user is connected. This is not an unreasonable state of affairs, and shouldn't affect email.

Basically, whether or not a valid route to stanley.wintermute.co.uk exists, I'd still need to see the actual error contained in the bounced mail to work out what was going wrong.

PRESS RELEASE
Atari Days
Announcing the 3rd Edition of the italian Atari Fair

TORINO - 16th july 1996
Emmesoft, the most important italian source for Atari products (located in Torino-ITALY), announces the third edition of the italian Fair for the Atari market, called Atari Days.
This Fair, which has been held for the very first time in December 1994, takes as example similar events periodically held in Germany, France, England, Sweden and USA; Atari Days is the right place to show and demonstrate all latest products and releases for Atari and Atari compatible computers.
The first two editions have had a good success, while this new edition will benefit of all suggestions from distributors and developers to improve Atari Days.

Atari Days - General Information

Where & when
Atari Days will be held in Torino (ITALIA) from Saturday 16th to Monday 18th November 1996; the most important innovation from the last edition is the number of opening days, three insted of two, to grant wider access to the people.
The selected site is the same of the previous edition: the central Hotel Holiday Inn (Via Assietta 3, in front of Porta Nuova's railstation).
The entrance will be ticket regulated (opening hours 10-18) while distributors and dealers pre-registered will get free entrance to the Fair.

First Edition of the Musical Contest
"MUSICA CON ATARI"
Since Atari computers are still strongly used in the musical field, during Atari Days there will be the Musical Contest "Musica con Atari", with over 3 millions Lit. (2.000 $) of prizes.
This Musical Contest is reserved to every musician (even outside Italy), hobbyst or professional.
"Musica con Atari" is sponsored by the most important companies in the Atari market. Between them are:

Charlie Lab
Steinberg
Emagic
C-LAB

Between the prizes awarded are a MIDI Digitar Midi-guitar, software Cubase Audio, Notator Logic sequencer.

For more detailed information and/or to receive the announcement of competition in English (the deadline to send the floppy disks with MIDIFile in General MIDI standard is 31th October 1996) please contact:
Manuela Esterni - phone +39 337 226379 fax +39 11 4374311
e-mail: atarimag@mbox.vol.it

The awarding of prizes of the musicians winners of "Musica con Atari" will be during Atari Days. N.B.: International winners are not obliged to be phisically present during the awarding of prizes.

Reserved AREAS FOR EXHIBITORS
In Atari Days people will find booths for demonstrations of new products and latest releases.
The major distributors and developers in the italian Atari market, together with distributors and international developers, the italian magazine "Atari Magazine" and the french magazine ST MAG will exhibit during the Fair.

Reserved AREAS FOR WORKSHOPS
During Atari Days ther will be Workshops about graphics, MIDI, Multimedia,MIDI etc...

What's new during Atari Days *
Falcon MK-X from C-LAB, the new rack mounted model, based upon licensed Falcon030 technology from Atari Corp.
Falcon Studio II, the all-new Falcon based digital audio workstation
Hades the new version from the Medusa family, with Motorola 68040 processor , 8 Mb RAM and 1.2 Gb Hd
Lithos scan: professional software for Agfa scanners with "direct to disk scanning"
Karaoke Voice Wizard: the latest release from Jurgen Schwietering (of Steinberg fame) of the most powerful Karaoke software for Atari
Notator Logic 2.5: the long awaited upgrade of one of the most famous MIDI sequencer in the world
Yamaha CD Audio Mastering : professional system for mastering Audio CD with Falcon e Cubase Audio
Afterburner, 68040 accelerator board for Falcon
MagiC 5: the latest release of the multitasking OS for Falcon
MagiC Mac e NVDI Mac: Atari emulator for Mac
Gemulator Gold e Laptop: Atari emulator for Windows 95 and for notebook PCs
Background Photos 2: the new all-italian professional textures CD ROM, volume 2

SNEAK PREVIEWS DURING Atari Days
Internet linking with Atari Magazine. Visitors will be able to "chat" with the most important developers from USA Germany, France and England
News on line ON-line newsreading, with the writers from "Atari Magazine", of the latest news for Atari
World Wide Web exploring, net-surfing of the Atari world on the WEB
Atari Club, meeting with the local Atari users' groups

Why should I attend/visit Atari Days ?
+It's the only one Fair of its kind in Italy!!

For more information:
Atari Days
Manuela Esterni Tel. +39 337 226379 FAX +39 11 4374311
e-mail: atarimag@mbox.vol.it

: Strange I was just about to post to ask the same thing.
: I've heard aboout the CM8833 MkII but mine just seems to be
: called a CM8833. Does this differ from the MkII?

Yes they do differ by quite a bit on the connector front. The Mk I has a SCART input, a TTL RGB input, as well as composite video and audio. The Mk II has a single 9 pin D (?) for all video and 2 phonos for stereo audio (may be wrong on this 'cos I have a Mk I)

: If anyone has the pinouts for the RGB port could they mail them
: to me as well.

The CM8833 (Mk I) has a standard SCART input which is used for analogue RGB. For pinouts of this, look in the back of a video manual of somewhere similar (I've got them somewhere if you can't find them). I seem to recall the TTL RGB input is on an 8 pin DIN or similar connector - the pinouts of this I don't know, although I guess they're in the manual so I could check. I guess you'll be wanting to use the SCART if you are connecting it to an ST as it has an analogue output.
Dave

Date: 1996-07-26 00:00:00 UTC
From: Ron Blizzard <rblizz@magiclink.com>
Message-ID: <31F8D8B4.1C60@magiclink.com>
Source record: 141195

Recently I had someone call our shop looking for a hard drive for an Atari ST. He also could use a floppy drive. I told him I would try to find out who sells Atari parts and supplies and pass the information along to him. Is there a Vendor list available somewhere on the net? Thanks for any information. I've been a long-time user of the Sinclair QL -- and I know some Atari ST users have QL emulators. Thanks. --Ron

Yo Rich, I'm surprise Intel isn't scared of you using a non-Intel non-IBM clone that isn't a Mac :)

As far as this upgrade goes, we programers call it a 'port'. Meaning a successful program on one platform is translated over to another platform.

Usually demand is a spark for porting, I imaged Calamus users going to DMC "Please make Calamus for the dreaded Windoze PC's we have to use at work, we can't still convince our supervisors to let us use our reliable Atari's." Of course with emulators out, you can use the ST flavor of Calamus on PC's and even Mac's.

"You hear that SinClap! Get MagicMac, use the GEM applications, and then b***h about them. At least you'll actually know what you're talking about."

Since I never used Calamus or even need to use one, I won't pass judgment. If you don't know what something is, don't talk about it. :)

>> And, so what? New Atari magazines will continue to be released too.
>Yes, but to make up for the ones that have ended publishing..
And what difference does that make if it serves its purpose of giving information to the readers? What is the point in having trillions of magazines all giving the reader the same information in that particular month??? with the same programs on the CDs as the other mags?

>Why should the Mac rags have 500 pages? 200+ pages is enough, unless you want
>to be like a Computer Shopper.
cos you were complaining about the size of Atari mags being 60 pages with not many adverts compaared to a Mac mag of 200+ pages with loads of adverts. I simply pointed out that if you want a fair comparison, then compare the size of the markets for each platform and then take the size of the mags in that context. So comparing the market share of the computers we are discussing, the Mac mags should have many many many more pages in proportion than the Atari mag, which it doesn't.. I don't think you read my comments... otherwise you would have not commented in the way above.

>Considering that Mac Addict has only published one issue so far. No, I have
>not used all and do not intends to do so. But there are a lot of valuable and
>useful goodies for all. As for the Demos, i do not need to instal on the HD
>just start the demo from the CD. Marathon III rocks!
Maybe it is like that in the States, but here in the UK, most DEmos need to be installed from the CD to the hard drive.

Doesn't seem that reliable under Magic4 either (I run it in single tasking mode like CAB which improves things a little).

>under plain TOS. I'm guessing that since the program is KeyWare,
>one could register the software and have access to later versions.
> I currently don't use MG-FTP because I've not registered it,
>and I've not registered it because it doesn't work under Geneva. Perhaps
>when I get some extra cash I'll register it just to see if there are
>later versions that are Geneva friendly. Good luck in your search...

Now this is a bit odd. You get the dialog come up saying about keyware but the docs don't mention it. They don't ask for any registration at all. I'm certainly not going to register it until it's a little more reliable (if it's shareware at all).

It certainly doesn't work with ftp.microsoft.com. (no directory is shown) and at other times it just seems to hang every so often and then come back to life.

I still think it has the potential to be a great ftp program if it's developed further. So how about it??

Gary.

Source record: 141202

Spencer, here in the states, the Syquest drives are being sold off with 1 cartridge at anywhere from $100 (CompUSA after $30 rebate) to $120 (just about everywhere else), so they are quite a bit less than the Zip drive, which has a $50 rebate, by the way, until some time next month. The EZ135 disks should be around for a while, but if I bought one, I would purchase several extras just to be safe.
With the Zip, you'll be slower, but you won't have any problem finding disks in the future, and it is more likely that you will be compatible with most other people.
If you need the speed, then the Syquest would be better. If you don't, then the Zip probably would be best. You could also go optical or even get a JTS drive. They are supposed to be pretty hot and will be installed in Compaq's new line of notebooks.

Scott

Spencer Davies <Spencer@mettav.demon.co.uk> wrote in article <16535_Spencer@mettav.demon.co.uk>...
> The Syquest seems to be faster, easier to use (treat it like a harddisk),

WDV> I have a Falcon that came without a hard drive. I am adding
WDV> an internal IDE to it but I can't find any documantation
WDV> stating where pin 1 is. Is it towards the front or back of
WDV> the computer?

Hi William,
It's towards the front of the Falcon. There should be a "1" printed on the PCB
in the vicinity of the IDE-connector.

Best regards,

Claes

1371. Daisy chaining internal scsi drives?

Newsgroup: comp.sys.atari.st
Date: 1996-07-26 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <4tb2aj$g2b@nntp5.u.washington.edu>
Source record: 141207

Anyone know if it's possible to daisy chain the internal scsi drive on a TT? I found a scsi drive really cheap, but it's got a ribbon connector and I've already got an internal scsi drive. How could I connect this to my system? I don't mind if the drive has to physically sit outside the TT, I just want to connect it somehow.

thanks
-kyle

>>This is CAB from WWW131.ZIP (it's better than previous versions but still
>>seems to hang).

I get this as well. Certain Jpegs just stop downloading. Escaping
stops it. Sometimes the Jpeg is displayed with some corruption,
usually just a bit at the bottom missing, others don't display at
all. It's as though STiK, or which ever part, is not excepting that
it has received the last packet, though I don't understand all this
stuff so I am probably talking rubbish.

>I am using CAB v1.3. I have no idea what WWW131.ZIP is. As I understand it,
>CAB v1.3 is the newest.

WWW131.ZIP is a pack containing the latest versions of CAB and STiK
along with installation utils and various other progs.

>I notice that some JPEGs will not display. Others will show in greyscale
>but not colour. Most, however, do work OK. So it's not just you.

It's me too.

Rich.

Thank you.

1374. Atari Musical Contest

Newsgroup: comp.sys.atari.st
Date: 1996-07-26 00:00:00 UTC
From: emmesoft@mbox.vol.it
Message-ID: <emmesoft-2607960952010001@to-b-15.intelnet.vol.it>
Source record: 141210

Musical Contest "Musica con Atari" - Announcement of competition

Art. 1 - Announcement of competition
Published and unpublished songs can partecipate at "Musica con Atari"; all songs must be sent not after the 31st October 1996 at:
Emmesoft Via San Donato 49 10144 TORINO (ITALY)
together with the registration fee of 33 (thirtythree) U.S. dollars for each song sent (a maximum of 2 songs are allowed for each Section). Money can be sent cash, via international post or bank transfer.
Registration fee can't be returned.
Art. 2
"Musica con Atari" Musical Contest is reserved to every musician (even outside Italy), hobbyst or professional. Competitors must be age 18 or over.
Art. 3
Competitors can partecipate with one or more song. Maximum duration allowed for each song is 6 minutes (for the "Classic Section" 15 minutes). While sending the song(s) musicians must include a little curriculum with their full address.
Art. 4
Sections available are:
Arrangment (songs not composed from the competitor, but rearranged in a creative way)
Original Compositions (original works composed by the competitor)
Classic (transcription of classical scores)
Transcriptions (famous songs faithful transcription)

All songs must be in MIDIFile format standard General Midi. Magnetic tapes or digital formats (DAT, CD ecc..) are excluded.
Art. 5
Jury is composed by 5 members. After the competitive examination of all the songs received according to the terms of art. 1 the jury will, at his unobjectionable decision, award the prizes given from the sponsors. The 4 winners of the Sections will receive the prizes during Atari Days.
Art. 6
All winners will be promptly informed to be able to be present at the awarding of the prizes. International winners are not obliged to be phisically present during the awarding of the prizes. All delivery and shipment costs to send prize to the address of international winners will be at winner's own expenses.
Art. 7
Jury's verdict is definitive and inappellable. While partecipating at the Musical Contest competitors of the prize will bind themselves to accept the final verdict without rising objections. This announcement of competition is in English and Italian and is composed by 9 (nine)

articles. For every controversy will be competent the Torino Court and the italian laws.
Art. 8
All floppy disks sent, at the end of the Musical Contest, will not be sent back.
Art. 9
Jury will examine all the songs received in the days 8th and 9th November 1996. During Atari Days the Atari press will be informed of the name of the winners.

Musical Contest "Musica con Atari" ENTRY FORM

Messrs. Emmesoft,
the undersigned _____
born in _____ date of birth _____
address _____
_____telephone number _____

encloses herewith a floppy disk containing the followings MIDIFile standard General Midi songs (please write songs' title and author):

_____
_____
_____

asking in this way to partecipate at the Musical Contest "Musica con Atari". The undersigned asks to compete with the above mentioned song(s) in the Section (please tick the preferred section; if You partecipate with more than one song please state the section even at the side of the titles You have already indicated):

_ Arrangment (songs not composed from the competitor, but rearranged in a creative way)
_ Original Compositions (original works composed by the competitor)
_ Classic (transcription of classical scores)
_ Transcriptions (famous songs faithful transcription)

All songs must be in MIDIFile format standard General Midi. Magnetic tapes or digital formats (DAT, CD ecc..) are excluded.

The undersigned encloses herewith:
1- floppy disk containing the indicatedMIDIFile standard General Midi song(s)
2- payment of 33 (thirtythree) US$ for each song sent. Payment can be either done at:

A-Postal Account 34999102 or
B-Bank Transfer: Banca S. Paolo di Torino - Ag. 3 TORINO account number 150224

to:
Emmesoft, Via San Donato 49 10144 TORINO (ITALY)

1375. Atari 1040STf

Newsgroup: comp.sys.atari.st
Date: 1996-07-26 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4tb9gl$pus@sally.dma.org>
Source record: 141211

Hello! I have an Atari 1040STf that I am willing to get rid of for anyone needing parts for theirs. It works perfectly fine, the lid doesn't go completely on due to me loosing the screws after taking it off. The floppy disk drive was once a 3.5" height high density converted into a 720k 3.5" height. It works, and the side of the ST was accomidated for the drive. If interested I am asking $20+shipping. It has only one meg of RAM and I may throw in some 720K floppies with some software, not sure though.

Rory McMahon wrote this to All about Keyboard Kabloooey?:
RM> When I boot my MegaSTE, I get no response from my keyboard or
RM> mouse....
RM> Any Ideas?

Hi Rory,
Do the programs load normally when you start?
If they do and you can't use keyboard or mouse, I'd suspect either the Keyboard CPU (located on the keyboard PCB) or a 6850-chip on the computer's PCB.

Best regards,

Claes

I recommend a program called Icon Edit available from
ftp.cnam.fr/pub/Atari. It allows complete editing of icons, plus imports
Windoze icons (*.ICO, *.IBI, *.IB3 formats). I downloaded a file of
1,000 Windoze icons and spent 2 days completely revamping my desktop
icons. :)

Good luck,
George

Message-ID: <31F8EE22.2B9@3rdplanet.com>
Source record: 141219

'Ello all.

I just got a Spectre GCR, and have hooked it to my 520ST. I have a couple of problems I was hopeing someone could help with. First off, the Ver. 3.0 diskette has a few grooves in the disk,
and for some reason will not run <G>. I have it running with version 2.65, but I would like a
newer version. Does anyone have the newest, or can you point me to where I can find it.

Second, I have tried several different copies of System 6X software, and I can't seem to get them
to work. I have it running with System 3.2/Finder 5.4, but I would like to run with 6.0.5. Any
ideas?

Any help would be appriciated.

Thanx,

Dustin

Hi !
Does anybody know how to connect Amiga Technologies M1438S multisync to my Falcon ? I tried to make an adaptor but the picture starts to tremble after a while :(
A short description of my adaptor (i have a Screenblaster so it is actually Amiga(DB23) to VGA adaptor):
I connected Red, Blue, Green, Red Gnd, Blue Gnd, Green Gnd, HSync and Vsync from VGA socket to the same in Amiga one. The remainig two Gnd from VGA to Sync Gnd in DB23.

Why doesn't it work ? If you have any ideas, please Email me !

John,

Thanks for the info. The implication in your post is that the upgrade
IS compatible with Cubase Audio Falcon.. is that correct?

If so, please estimate about the performance increase you get with the
upgrade over a stock Falcon with 14 megs, especially wavform drawing
after recording.

Thanks..

-Mark

From the picture of Nemesis that appeared in STF 84 (July 96) it
looks to be about 7cm long and 1.5cm wide comparing it with the pound
coin in the pic. The pic is roughly actual size.

On the board is an Oscillator and a small chip.
Assuming that fitting isn't too tricky I will be getting one.

I don't think Nemesis is available yet. You could email David Encill
at Titan Designs, 100345.2350@compuserve.com, for more info or check
out Titan Designs web pages at :
http://ourworld.compuserve.com/homepages/TITANWEB

1393. M_PLAYER version 1.32

Newsgroup: comp.sys.atari.st
Date: 1996-07-26 00:00:00 UTC
From: dave <dave@mbha.demon.co.uk>
Message-ID: <960726Z210852.537dave@mbha.demon.co.uk>
Source record: 141229

Greetings all,

I have just uploaded version 1.32 of M_PLAYER to the following sites.
Guillaume has added 2 new compression formats to this excellent product.

Try it - you'll like it!

--
dave

ftp sites:
ftp.cnam.fr /pub/Atari/incoming
ftp.uni-kl.de /pub/incoming/atari

Look for MPLYR132.ZIP, but since I haven't tried it myself, try lower case as
well...

BBS's:
42BBS (01256-895106)
Chameleon BBS (01454-881095)
Tavern BBS (0181-445-6514).

Look for MPLAYR13.ZIP.

1395. update of my www-pages

Newsgroup: comp.sys.atari.st
Date: 1996-07-26 00:00:00 UTC
From: johan.nordlander@engelska.umu.se
Message-ID: <johan.nordlander-2607961652500001@johan.eng.umu.se>
Source record: 141231

Hi,
I am right in the process of updating my Atari www-pages on

http://johan.eng.umu.se/PAGES/ATARI_STUFF.html

which include links, etc, to things Atari. Check it out and let me know what you think and especially if the TT download area works properly. I have tested it from my TT running STiK 1.08 and CAB, and this seems to work OK.

Greetings

>sofware (tin) is a pain in the a**

To read follow-ups with tin, press the tab key when the thread you want to read is highlighted; you will be at the first unread article. Press tab again and you are at the next. What can be easier than that. Most people who complain about tin have never spent the 10 minutes it takes to read the docs and learn to use it. The microsofters who complain often haven't figured out how to make the arrow keys on the keyboard work in their term software.

Sorry, i don't have solid infos but only personal experiences...
Anyway, i can reach 57600bps. Beyond this speed, i'm getting a lot of CRC errors. You only need the HSMiNT device driver (.XDD) and a small progy to put in the AUTO folder (RSVX). And there you go.

I got it! Thanks much for your help...now can I ask a further question?
How do you get it to work...I didn't have any AVI files handy (where is
a good FTP site to get those?) so I tried FLI and FLC files on it...they
were wickedly fast, as stated, but I only can get mono...I changed my
Falcon's video setting from 256 to "True Color" but it still only gave
mono...any ideas? Thanks in advance! :)

>> Chimera is the last piece of garbage I would recommend to anyone . I

I have to agree with you to some extent. I would not call it "garbage",
but CAB is generally much better, and for those who don't want X Window
System, CAB can run under GEM - much simpler, and it works in minimal
hardware setup.

>> was at the TAF convention in Toronto anticipating finally having a
>> Web browser for the Atari line . To say I wasn't amused is the
>> understatement of the year . Think about it Xwindows , Mint and then
>> Chimera all on a 1040 st ! That's the difference Oasis runs on all

Just don't use Chimera. Use CAB instead (yes, CAB does work under MiNTNet).
I tried Chimera, but found it a nuisance. Then I tried CAB, and it works
great.

As for Spider, why wait when you can use CAB under MiNTNet now?

I am not claiming that "MiNTNet is better than NOS/Oasis". It all depends on
what you want to use it for. MiNTNet can undoubtedly do much more than
NOS/Oasis, but it is slightly more tricky to setup and needs a slightly
better hardware setup. Personally, I would never use NOS/Oasis instead of
MiNTNet, but for some people who do not want a powerful system like MiNTNet,
NOS/Oasis is just fine.

I am only posting this because I can see that there is mis-information
about NOS and MiNTNet with people making silly claims for the sake of
"my internet access software is better than yours". Hopefully this will
clarify the advantages and disadvantages of MiNTNet.

I use MiNTNet to access the internet via a PPP dialup connection. To use it effectively, however, you will need a hard drive and more than 1MB RAM.

If you have such a setup, MiNTNet should do the job fine. You can "browse the web" graphically, ftp graphically, send mail graphically and do everything else imaginable, although mostly with text based programs, e.g. gopher, telnet, archie...

Apparently the CaTTamaran works very well, upgrades clock speed to 48MHz.

The Nemesis(sp?), however, is for the Falcon030. The benchmarks I saw
were not amazingly impressive, but it is _very_ cheap.

If you happen to have a newsreader restricting you to 4 lines, then you
will probably have to live with that. Having more than 4 lines is
discouraged by the netiquette guidelines anyway, so I think this
restriction is A Good Thing. See the Netiquette and alt.fan.warlord for
details 8-)

I have a 20MB Supra hard disk and I've been having some problems
with it lately. Every once in awhile, it will randomly delete or garble
a file. Also, my 1040ste with TOS 2.06 sometimes refuses to acknowledge
this drives existence when booting. ST Tools gives me indications of
deleted files still being in the FAT, but removed from the directory.
Does anybody out there with some hardware knowledge have any ideas
on how to prolong the life of this drive while I save money for a new
one? Also, does TOS 2.06 have any known problems/limitations with hard
drives?

thanx

I've just downloaded this. It's brilliant!

It's a cache handler for CAB and let's you examine the cache and copy files
from the cache ie. gifs, jpgs etc. to another directory (USING THEIR
ORIGINAL NAMES ie. fred.jpg and NOT 00000043.jpg). Excellent!

If you use CAB, you should definately get hold of this!

Gary.

Good try, but unfortuately, it's illegal to add the info to their credit
report.

Whenever I receive junk e-mail requests, I reply with an e-mail I wrote
that says "I will NEVER EVER EVER EVER. . . buy products from a company
that fills my mailbox with junk mail." (Given that there is about 45L
45K of NEVERs in there, I rarely receive a message back). ;')

Regardless, I hope SinClap is on every mailing list for TOS products under
the sun. :')

m> IBM clone that isn't a Mac :)

You'd be amazed at the number of engineers whith whom I work who have good things to say about Atari computers (both 8-bit and the TOS-based systems). Remember, engineers see the world as a huge toybox with lots of under-optimized toys to play with. They really don't care about brand name loyalty except when discussing stock options. ;^)

Certainly would reduce his volume, wouldn't it? Of course, if the Mac users hadn't thrown him out of comp.sys.mac.advocacy, he would at least have someplace other than alt.janitorial.geeks to communicate with his peers.

No, what am I saying? Most Mac users are relatively intelligent and have breeding.

From: fl@zap.io.org
Message-ID: <4tepdr$5n4@zap.io.org>
Source record: 141111

I'm having absolutely no luck getting LDW Power spreadsheet to print on my HP 5L Laserjet printer. I have SpeedoGdos 5.03, but I've been told that LDW won't recognize the vector format for those fonts or printer drivers and will only work with older versions of GDOS. I've tried installing the version of GDOS that comes with the program, but it seems that the TT has some incompatabilities with that program (I have a TT, TOS 3.06).

Has anyone gotten this program to print using a modern laser printer, and if so, what version of GDOS did you use?

Thanks in advance.

s > What's so modern about TOS? I have heard enough to comment
s > on Calamus. Such as a screwed up cumbersome interface and
s > lack of support for postscript.

so you've HEARD enough about Calamus, but NEVER USED it. I stand
by my statement - you are unqualified to make a judgement on
Calamus. It has also been pointed out to you on this forum the
changes that have been made with TOS up to TOS 4.03 - which you
continue to ignore.

s > Just one country? Interesting that Atari users would buy Macs
s > to run magicmac considering that the Jihads have labeled the
s > Mac as inferior despite standard 16 bit sound, 16 bit color,
s > Quicktime, standard CDROM, wealth of CD apps, Netscape,
s > cyberdog, opendoc, PowerPC and future.

Show me where I have ever said that Macs were inferior, or that
I have ever denigrated the Mac. I have high respect for the Mac,
having learned from it that it was possible to compute without
having to type in lines of gobbledegook to make the computer go. My
brother is a qualified Apple repairman, and has shown me quite a bit
regarding Macs. I also certainly do not want Apple to go away -
however, if the current boneheads don't get things going, Apple's
not going to HAVE a future, despite all the nice stuff.

I'd also like to see a post from me where I went into the Mac
computer groups and told the users there that they were all
boneheads and losers, and that my platform was better than their
"toys". Although I feel the Falcon is the computer for me, I
certainly show no disrespect for the choices of others - in fact,
these days I try to help out those who are trying to get their first
computer. Nor do I feel insecure about the events in my life or my
choice of computer to act like a bitter man with no life and an axe
to grind.

s > like Claris Draw.

but what about all those people who want to use CorelDraw for Mac, which is still, to use your own yardstick, "vapour", and don't like Claris Draw? Don't dance around the issue.

s > Strata Vision 3d, Freehand, Web Animator, Web Arranger, Web
s > Page construction kit, Webstar, Adobe Site Mill, Adobe
s > PageMill and Internet Phone.

waffling, I see. And bragging. I was merely pointing out your fallacy of saying that there are no new Atari programs out there and that none were being currently developed, and that we had to rely on "eighties applications" and "shareware". I didn't ask you for a list of your new toys.

s > There is nothing wrong with 80's apps but I am ammused how
s > jihads state how much superior the ST platform is because
s > memory and HD space is considered swear words because 16 megs
s > is considered standard.

Then why did you throw the idea of Atari eighties apps in our face like so much rotten tuna?

Atari users have been able to use powerful applications for years that are very much the equal of the other platforms without having to shell out for ridiculous amounts of hard drive space and RAM - in fact it's only been the last few years that the issue of extra RAM and hard drive space has come up in the case of colour DTP and hard disk recording. I could have chosen to remain with 4 megs in my machine, as that was all I really needed for my day-to-day use. I merely chose to go up to 14 meg because I though it would be

fun to have a more powerful machine, to make fuller use of multitasking, and to speed up Calamus SL (which, when processing and designing colour documents, makes a big difference in speed). Strangely enough, for the most part I haven't made the most use of all this extra RAM other than with Calamus - I still treat it like it was still my original 4-meg system. Well, for the next while anyway. :)

16 meg on other systems is considered standard because of bloated operating systems like Windows '95 that are sloppily written and coded with too much bogosity - as compared to the Falcon's system, which takes up about, say, 512K in memory. Intel system users would be much better off using something like Linux, which is better coded and runs like stink on a Pentium, and, I believe, doesn't require as much RAM as Windows '95 (please correct me if I'm wrong) - but Citizen Bill doesn't want the computing world to know that.

s > So? Are you aware that PC's come standard with 8-16 MB? If
s > you are running a memory hog of Office, 16 megs is needed.
s > But have you seen what Office can do? However, on the mac
s > side, ClarisWorks, WriteNow and Nisus are low memory apps
s > considering the functionality in these apps and 8 megs will do.

again - why would a word processor require 8 megabytes of memory when I can do an equal or better job on a word processor in two megabytes? Quit dancing and answer the question.

s > However, Atari Jihads think that more memory is bad. In the
s > real world it's progress. The jihads think the industry
s > should stagnate and be like the ST platform were things remain
s > the same from the 80's. 16 megs is commodity and standard
s > like when 48k on the Atari 8 bits was considered high.

show me where anyone that's said that, with quotes, dates, and names. Nor has the platform stagnated - why are there things like Falcons, TTs and TOS-upgrades, which appeared in the nineties?

s > I don't live in Michigan and in no way connected to the
s > militias. Nice try. Yea, I saw that militia flick on C-span
s > about a gov't conspiracy to implant communication devices for
s > monitoring and the invasion of foreign troops which have been
s > going on for decades for training

ever hear of sarcasm? I was simply comparing your tactics to the tactics of the Michigan Militia - including hate, paranoia, and a touch of craziness. I dislike the term "Atari Jihad", and request you stop using it.

> Dan Dreibelbis, Atari CD-ROM user since 1994. If you can
> actually read rather than post your flame-bait, Atari users
> have been able to access CD-ROM for a fair bit of time. Roger
> Burrows developed EXTENDOS, a wonderful driver program for

s > running a SCSI Is CDROM standard on St's? Have the
s > developers writing CDROM apps specificaly for the ST? I have
s > not seen any listing of ST cd titles?

why don't you take a look at what we've been discussing here -
or have your blinders been on too tight? CD-ROM is not standard, but
can be easily added via SCSI or the cartridge port. People are
writing drivers to utilize existing PC CD-ROMs for the last two
years. At least two ganes are out for the Falcon on CD-ROM -
Robinson's Requiem and Ishar III. But of course, being the guy you
are, you'll ignore all this and still pound out the same tired old
accusations.

s > The current management cleaned up the mess from the last one.

Correct to read "ARE CLEANING UP". They're not out of the woods
yet, Binky.

s > Rich is a pretty cool-headed guy is an understatement. He
s > cries wolf on many instances like complaining to ones sysadmin
s > who in turned basicaly told him to grow up and quit being a
s > baby.

Rich came on here to tell his side of the story after you posted
your last idiotic comment and has spelled out exactly what happened
between you and him and your sysop and him. Giving both your and his
histories, I'd rather prefer his side of the events. Calling him a
liar is not going to make things any easier on your side. What are
the other "many instances" where he has "cried wolf", with dates,
names, situations?

s > Excuse me.. I am a bully? No sir, I am a realist. Yes I
s > participate in Amiga groups because of being a user of the
s > Amiga. Amiga and ST users have alot in common for making un
s > true statements about other platforms and being simply
s > arrogant. Nothing wrong with reality checks.

you are a realist in the same way that Rush Limbaugh is a
realist - and you are both bullies AND arrogant. Despite your
professed hatred of him, the two of you are cut from the same cloth.
And who's making the untrue statements? I have corrected you on many
of these counts, and yet you, like Limbaugh when confronted by FAIR
of his gaffes and mistruths, have chosen to ignore them or dance
around them with unrelated platitudes, prefering to go on again and
again with your accusations of "Atari Jihads" who are "out to get
you" and your choice of computer.

You'd better hope that Al Franken doesn't write a book about YOU
someday :).

s > He he he.. You should practise what you preach. Debates
s > happen all the time in this area. The issue I see is that you
s > and the Jihads do no like anything remotely negatively said
s > about the ST but saying how bad the other platforms are.

but this is not a debate. Nor are debates allowed in this area.
Nor have you followed the standard rules for a debate, which assumes
respect for the opponent despite his beliefs. Nor has anyone asked
this to be a debate. I rather liken this to a UFO debunking, where
one takes what one claims is true and promptly rips it to shreds by
pointing out the flaws in logic and reality, as what I have done.
(No offence meant to any alien life forms reading this feed :))Your
arguments do not hold up to scrutiny, and when faced with the cold
hard facts, you dance around it and try to change the subject.

I do practice what I preach - And if you think what I'm saying
to YOU is rough, you should see how I handle bigots. Oh, yeah, you
have - that's why Roger's not here anymore :)

(special thanks to Morrissey of the Smiths for coming up with
such a wonderful song title - describes SinClap to a "T". Oh, yeah,
SinClap, if you don't know what the song's about, it's on the Smiths
album THE QUEEN IS DEAD - I suggest you have a listen)

>
```

If this is of any use: When I upgraded the scsi drive in my Profile II about 6 months ago, once the drives were daisy chained the ST immediately recognised both drives and renamed the partitions of the second drive automatically. This allowed very fast copying from the old 40 meg drive to the new 540 meg drive. Seems like plug'n'play is a concept that's been around on our Ataris for a while. If the old drive hadn't been pretty sick at the time I could've quite happily and easily used it as a back-up drive. So take the above advice and simply plug it in. So long as it has power and is daiasy-chained into the system everything should work just fine!

Good luck

Andrew

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

Mirrors to 'atari.archive.umich.edu'

(mirror to tsx-11.mit.edu- 'linux' section) (134.96.82.13)

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site

HOW TO GET FILES VIA FTP

Below follows a step-by-step guide on how to get hold of files via FTP.
Your specific version of the FTP program might differ slightly (it might
have extra functions and be more user friendly etc.) But the main procedure
is likely to be more or less the same.

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
======================================

What to type What it does
----
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
---
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
---

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
---
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
---

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
---
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

_____

[2] Preparing for file downloads
==========

cd /directory/ (i.e: cd/pub/atari/) [MOVE TO DESIRED DIRECTORY]
bin [SET TRANSFER MODE TO BINARY]
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:
---
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX

```
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
---------------------------------------

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

\_\_\_
```

```
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
########################################
226 Transfer complete.
ftp>
---------------------------------------
```

* you can also use a 'wildcard' to get hold of single files or a specified selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this file or not, you can use the command 'prompt'. FTP will then proceed to get all the files that match your wildcard without asking if you want them.

Example:

```
---------------------------------------
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
---------------------------------------
```

_____

[4] Ending your FTP session

```
---------------------------
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
```

Example:

```
---------------------------------------
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---------------------------------------
```

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:

```
---------------------------------------
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
```

---

* When doing a 'close' and re-entering a new FTP site you won't have to set
up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then
restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
=============================
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory

```
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
```

```
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/
_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/_/

TRANSFERRING FILES TO MS-DOS DISKS ON UNIX TERMINAL SYSTEMS
-----------------------------------------------------------
Part of this is dependant on you having the GNU msdos-utilities available
at your site. If you don't, ask your local system operator how to transfer
files to/from MSDOS disks (The Atari ST reads MSDOS formatted disks).

* If your terminal doesn't have a disk drive you can "remote login" to
another computer that does (and use it's disk drive):

rlogin {computer name} [REMOTE LOGIN TO ANOTHER MACHINE]
(i.e: rlogin hnoss)
(You can now access the disk just as if it was on your own terminal, except
for the disk drive being physically on that other machine).

mcopy {filename} a: [COPY FILE(S) TO DISK]
(i.e: mcopy autosort.zip a:)
(i.e: mcopy autosort.zip icone.lzh files.txt dcxtrct.zoo a:)
mdir [SHOW DISK DIRECTORY/FREE SPACE]
fdformat -l -d [FORMAT 720K DISK- MSDOS]
fdformat -d [FORMAT 1.44MB DISK- MSDOS]
mcopy a:{filename on disk} {copy filename} [COPY FILE FROM DISK TO UNIX]
(i.e: mcopy a:ftplist.txt ftplist.txt)
mcopy a:"*" . [COPY ALL FILES FROM DISK TO UNIX]
mdel a:{filename} [DELETE A FILE ON DISK]
(i.e: mdel a:ftplist.txt)
eject [EJECT DISKS FROM DRIVES WITH NO 'MANUAL EJECT BUTTON']

------------------------------ End of file -------------------------------
```

Re-distribution allowed as long as nothing is altered or omitted.

1432. TT030 soft/hardware pack

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC
From: stevend@io.org
Message-ID: <4tg533$f1n@news1.io.org>
Source record: 141118

The following package will be available from now to the end of the month.
Asking $1000.00 CAN no tax. Offers welcome. Please contact me by
private
E-mail here, or internet or phone.

Internet: stevend@io.org
Tel: 416 703 5936

Package include the following:

Machine: TT030 Motherboard revision "H" *
OS: TOS 3.06
RAM: 4MegST and 4MegTT RAM
Floppy: 1.4Meg
Hard dirves: 80Meg conner, 175Meg Quantum
CD-ROM: Toshiba 2x speed
Mini PC tower for CD-ROM and Hard drives.
FaxModem: GVC 14400bps V.42bis/MNP5 external.*
SCSI cable for tower.

Stereo Replay sound editor with midi cartridge and RCA audio input and
output.
ICD Pro hard disk driver and utilities. *
Cardfile4 V4.06 PIM form Gribnif. *
NeoDesk CLI V2.10 *
Neodesk4 V4.03 *
Straight Fax V2.2 *
Diamond Back 3 V3.51 *
Diamond Edge V1.0
Edhak V3.02 *
The Home Accountant *
Spelling Sentry V1.24 *
Lattice C V5.5 and V5.6 *
ExtenDos Pro V2.4 *
Music tutors: Keyboard Fingering and Keyboard Kapers
Hard Disk Toolkit Plus SCSI tape kit
PCBoard Designer. Used to design and build professional circuit boards.
Golden Image B/W hand-scanner with Touchup V2.5 *
Connect telecomm. program V2.4 *
Xboot boot manager V3.10 *
SARA for Grolier Encyclopedia V6 *
SARA 5 pack. CD access pack *
Fastpath *

Speed-o-lit picture viewer/editor V3.8 *
Profile 2 system info *
STOS game creator and compiler with the game maker's manual.
Atari Develpoers kit with FSMGDOS and docs
Masterplan Spreadsheet
GST Macro Assembler
Time Works desktop publishing
The Atari ST Book
The Third Atari ST book
Compute!s Atari ST Machine Language Programming guide
Learning C on the Atari ST
Compute!s ST Programmer's guide
Programmer's guide to GEM
Motorola 8-/16-/32bit Processor user's manual MC68000, MC68008, MC68010,
MC68HC00
Motorola Programmers reference manual MC6800, MC68020, MC68030,
MC688851,
MC68881/882
Atari magazines
and much more.

Complete package must go by the end of the month.
* Latest version.

I have had the same problem. I notice the console window of Gemini desktop is a solution - when you run Gemini, all this sort of output goes into the console window. Unfortunately, this is little use if you do not want to use Gemini. BTW, Thing's console window does not appear to have the same effect.

So, if you find a solution, let me know too.

It would help if you mentioned what newsreader you are using.

With UPoint light, you just choose Reply or Followup and the message you
are reading is automatically quoted.

In Tin, it works much the same way.

Otherwise, tell people what software you use and you might get more useful
information.

(snip snip snip)

Excellent! This will save on mailing and acquisition costs definitely!
Unfortunately I only have 2 or three issues left in my collection (they
went the way of my 800xl - disappeared under mysterious circumstances)
but this was one of the best, most focussed magazines ever. One thing
you might add is a link to the Antic disk archive at ftp.clark.net,
under /pub/atari/mag/antic/. Maybe you can even place a link to the
appropriate file in articles instead of giving the computer listing.
I just checked the archive and the files are under directories corres-
ponding to each issue, that is the disks are not just one zip'd blob
file each.

Oh, and can you post the permission letter to the newsgroup, and have
the info placed into the appropriate FAQs (especially newbie). That
may lessen the confusion later on and the charges of copywrite infringe-
ment from people who don't follow this thread.

Callum Lerwick <Callum.Lerwick@flight.org> writes:

>I just bought a Megafile 20, but it didn't come with an ACSI a.k.a DMA
>cable. So can anyone ship an extra one to me cheaply?

I have a working Megafile ASCI cable - and a dead Megafile. What's it worth to you? I normally ship UPS or Post Office COD. The cable is worth maybe $20? Plus the cost of shipping/COD - where are you? I'm in NYC.

1438. For Sale - Mega ST 2, Monitor

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC
From: sunspot@well.com
Message-ID: <4tg9bh$n1u@nh1.well.com>
Source record: 141124

For sale:

Mega ST2 computer, excellent working condition, upgraded to Rainbow TOS 1.4.

SC1224 monitor, marginal working condition (speaker removed, intermittent image intensity flicker which is probably due to a bad cable / contacts).

The Mega has an audio jack, so it can be connected to any standard computer multimedia speaker system for audio.

Well over 50 disks of software come with it, including:

Word Perfect
1st Word
Interlink
Quick STII
DC Desktop
Dungeon Master
Chaos Strikes Back
SimCity
Populous
Oids

Plus dozens and dozens of disks of PD and shareware software.

$250 for everything, and I'll throw in one large (100? disks) and one small (50?) floppy holder, as I don't need them anymore, plus about 35-40 blank floppies.

Please respond via E-Mail to sunspot@well.com. Thanks!

VGA-Connecting, a extract from the german DOITF030..

(It's a hard Way for me to translate all informations in
the correct way, anytime i can't found the right words for
the right place..) sorry..

Your F030-Videologic read the Signal M1 und M0 from
the Videoplug backside Falcon.

The F030 VGA logic registrated only tree Types of Monitors.

First SM124 Monochrome, SM1224 (or some R,G,B-Displays, last
all (S)VGA Screens. If you connect one of this Screen, have a
look to both control pins M0 and M1.
You Falcon is not propper enouth to smel what kind of display
is connected. You must tell him..

F030 Videoport Pinout:

Pin 1
Red-Signal
Pin 2
Green-Signal
Pin 3
Blue-Signal
Pin 4
Monochrome-Signal only for SM124 or also..
Pin 5
GND/Logic
Pin 6
GND/ Red-Shild
Pin 7
GND/ Green-Shild
Pin 8
GND/ Blue-Shild
Pin 9
Audio-IN 1Vss max.
Pin 10
GND/Audio
Pin 11
GND/Video /Shild

Pin 12
Composit (incl.Syncron)-Signal
Pin 13
Horizontal Syncron-Signal
Pin 14
Vertical Syncron-Signal
Pin 15
external Clock-In (Only ScreenBlaster / GenLock)
Pin 16
Even_Odd
Pin 17
+12V (10mA !
Pin 18
M1-Monitordetect V1!
Pin 19
M0-Monitordetect V2!

If you have connect all return pins to the right return pins
from your display you got the best display qualitiy.

Pin 9 and Audio GND is the right point for the internal
speaker of your new display (Only iy you have a speaker in there)

Normaly VGA-Pinout (Monitor)

Pin 1
Red-Signal
Pin 2
Green-Signal
Pin 3
Blue-Signal
Pin 4
GND at some VGA/SVGA/MultiSync-Monitor
Pin 5
Check (Falcon n/c)
Pin 6
GND/ Red-Return /Shild
Pin 7
GND/ Green-Return /Shild
Pin 8
GND/ Blue-Return /Shild
Pin 9
Audio-IN 1Vss (n/c if your display have no internal speaker)
Pin 10
GND/Logic
Pin 11
GND/Video /Shild
Pin 12
n/c
Pin 13
Horizontal Syncron-Signal

Pin 14
Vertical Sycron-Signal
Pin 15
n/c

You MUST have a look to Pin M1/M0 !
Make sure you have a vga-display and wire M0 / M1 to GND only
in the right Way!

Display: ID-Bit M1/M0 Frequenz Hor. / Vert.

ST-Mono (SM124) 0 0 71Hz 35Khz
VGA (someone) 1 0 60Hz 31Khz
RGB (SM1224) 0 1 50Hz 15Khz
Genlockmode 1 1 50Hz 15Khz

Urgent!
Do NOT wire M1 / M0 to +12 / +5 V or to any other signal pin!!!!
Only to G N D ...

OK, i hope you found the right way..

regards, robert

Got the August issue a few days ago. Tried looking for it, after not looking for it for awhile. As far as I knew, they had a little place in their classifieds, but there's no classifieds in this issue, neither is there something mentioning the Ataris at all. I threw out most of the older issues, but may have some others. I don't hold out much hope for them holding onto that part of the mag.

However, a little persuasion from a lot of users and others should get them to bring it back.

Cybercube has a web page at http://www.interlog.com/~cyrel/
but I'm afraid they're just clearing their inventory and leaving
the Atari scene.

The problem with the CaTTamaran, appears to be that it works
well with some TT motherboard revisions, and less well - or not
at all, on some others. Cybercube could help you determine how
compatible your machine is.

Your mileage will vary, but here is my CaTTamaran story, if you
are interested... Mine had to be installed by Cybercube; I
failed to install it myself. (I have a rev. B motherboard, no
daughterboard; and a GE-Soft TT-RAM board.) Once installed, my
CaTT worked just fine until I upgraded TT-RAM above 4 Mb. Larger
amounts of memory seem to bring on an interference problem that
causes crashes. With my current memory configuration, the 48
Mhz mode is stable only with the CPU cache turned off... rather
useless. Again, this is _my_ story. Other TT's motherboards and
memory boards would have different tolerances and might behave
differently.

In terms of actual speed-up, you get 5-25% in real-life
applications and on GEM operations. Programs with tight loops
that fit into the processor cache benefit the most.

I hope this helps...

Yves

phil4@phil4.demon.co.uk barked in COMP.SYS.ATARI.ST on 27 Jul 96:

>> That would be your modem, Phil. HSmoda06 works perfectly with all of
>> the 14400 and 28800 modems I have tried on my Mega STe, both using the
>> TOS 2.05 that was in it originally, and using the 2.06 that I have in it
>> now.
p>
p> Now that _is_ strange... because not only have I heard from other
p> people who say that TOS 2.05 is seriously flawed in the flow control
p> dept. but that HSMODEM 6 won't cure this.

I would have to say that they know not whereof they speak, then. HSmodem is
a replacement for the serial routines in TOS. If you are using the standard
AUX: port, simply putting the default copies of DRIVIN.PRG and MFP.PRG in
your AUTO folder will take care of the flow control problems. If you're
using Modem2, then you need SCC.PRG (and a special cable), and you have to
set up M1 emulation in HSmodem, but I routinely use Modem2 at 115200 bps.

>> The Modem.CPX, however, will /also/ cause those problems. Remove it.
p>
p> why does MODEM.CPX cause problems ??? surely this is just doing what
p> any software woul do to set the baud rate and flow control ???

It limits your port speed to 19200, and it defaults to XON/XOFF flow control.

: Thank you in advance for any responses,

You could try Deskpic 5. I have used this in 256 colour mode but it is very very slow decoding GIFs, and very very awkward to figure out how to save the correct palette into a GEM X-IMG image. Incidentally, the loading of X-IMG images is fast. GEM-View 3.16 dithering options do not seem to put 256 colour palettes in the same order as the desktop will use them, and you will normally get all the system colours messed up with your X-IMG image when you load it into Deskpic. This is despite having tried ALL the available options in GEM-View. A nicer answer is to buy MagiC 4 :). It happily uses MOST X-IMG images without losing its system colours!

Whats so modern about the MacOS? Been around since about 1984 hasn't
it?

>There is nothing wrong with 80's apps but I am ammused how jihads state how
>much superior the ST platform is because memory and HD space is considered
>swear words because 16 megs is considered standard.

Nope you have got it wrong. If the Mac or PC did something 16 times
better in 16 megs than my ST does in 1 meg then great but as it
happens you'll be lucky to get even a 50 6ncrease in performance
especially when most stuff is paged to Hard disk, don't get me wrong
Virtual Memory is a nice feature but it's just been completely abused.
I have no complaints about the machines, they are fabulous (Macs),
standards are great but so much more could have been done, if ASH had
written the MacOS and other Atari programmers had written the software
in the beginning then I assure you that the Mac would be the number
one platform no matter what Microsoft did. Programmers just become
lazy, instead of writing compact and fast code the say "sod it, by the
time we've written this the stupid gits will have bought another 8
megs and upgraded the processor" where is the incentive to the
programmers to work hard when people like you will defend their
efforts and go along with them?

>So? Are you aware that PC's come standard with 8-16 MB? If you are running a
>memory hog of Office, 16 megs is needed. But have you seen what Office can do?

Sure it does a lot of stuff, but I bet you that it could have been
done much more efficiently, it's like a car that does 1 foot to the
gallon and you saying "yeah but it goes 200mph!!!", when there is
another car that does 180mph at 30mpg, which one do you go for?

>However, Atari Jihads think that more memory is bad.

More memory is great, but it should be OPTIONAL and available to work
in. I don't want to HAVE to have loads of memory for anything, I have
4megs and nothing would think about taking that much, even my WP which
can produce a printout just as good is not better than a PC/Mac WP (due
to the use of Speedo Vector fonts) only takes 2 meg including the
dictionary, thats a nice 2 meg space for fonts and text. I will run in
1 meg, thats great, you don't actually seem to want to have small
apps. If you are happy with your computer then great but if I have

better things to spend my money on than a new computer and 8 megs of ram every month to do little more than I can do now then I think it's up to me.

>In the real world it's progress.

sing the car analogy again, you are saying that it's progress if one year a car does 30mpg, and the next year it does 20mpg but now has an electric sunroof and electric windows. I'm thinking not.

>The jihads think the industry should stagnate and be like the ST
>platform were things remain the same from the 80's.

God no! I have no problem with things changing for the *BETTER*, these days you just get more bells and whistles added to a program, people upgrade the software and hardware and use not a single new feature in the majority of cases. I have never in my life seen an advert for an upgrade stating "Now even faster" or "More features, less size" or anything like that, but I've seen many WPs with new features that amny people neiter need, nor know how to use.

>16 megs is commodity and standard like when 48k on the Atari 8 bits
>was considered high.

So progress is when a tiny amount of something is seen as valuable one year and then a few years on over 300 times that amount is seen as a bare minimum to do little more, in a less stable but far more pretty environment?

>> Dan Dreibelbis, Atari CD-ROM user since 1994. If you can

>> developed EXTENDOS, a wonderful driver program for running a SCSI
>
>
>Is CDROM standard on St's? Have the developers writing CDROM apps specificaly
>for the ST? I have not seen any listing of ST cd titles?

Very true, atari CD support is poor, there's plenty of software collections but the standard ST does not have either the power of the colour pallette to do FMV and the like, but I don't really see this a major failing point. If software will fit on a floppy then a CD is not a necessity as it has now become in other areas of computing.

>Atari was a pro with vaporware and wrote the book on how to scew people.
>>
> Falcon price? Dropping all the time - the lowest price I've seen

>> functional system for around $1,000 - 1500 US.
>

>$1500 for an 030 in 1996? You can put together Pentium/powermacs for that
>price and use 1996 apps.

This is very true, the price is awful and I wouldn't recommend a new
Atari to any buyer, the support for new users just isn't there, the
Atari range is meant to be pushed and you have to know a bit about
computing to get it performing as it should. But the advantages for a
Mac/PC for an existing Atari user are nothing compared to the just the
price never mind the rest. IMHO.

>The current management cleaned up the mess from the last one. Sculley's
>policies are a question mark. Many argue that he should of Licensed the Mac OS
>on his watch. And for Jobs...If he was left in charge, Apple would not exist
>today. He is an arrogant bonehead.

I don't think you can really say that about Jobs, if it wasn't for him
Apple wouldn't exist today anyway! It would never have existed, it was
his company it should have been up to him what he did.

>Apple's current management is restoring the company's fortune by taking
>decisive actions such as reducing the value of the slow moving Performa
>inventory. Apple's Powermac line has been doing fine and it showed in the last
>quarter results. Apple's management took decisive action to make the Powerbook
>right. Would the Tramiels done so?
>
>Apple lost $32 million on sales of $2.2 billion with a backlog of $500 million.
>The asertion that there is no demand for Macs is absurd. These results are an
>improvement over the previous one where Apple took a huge charge on Performa
>inventory.

There is a large deman with Apple being the largest computer vendor in
the world but selling $2.2bil of equipment and still making a loss of
$32 million is not something that I would be too proud of, especially
as this loss was offset by liquidation of assets such as stock in AOL
etc.

>> coming from somebody who has proven himself certifiably INsane.

>He he he.. You should practise what you preach. Debates happen all the time
>in this area. The issue I see is that you and the Jihads do no like anything
>remotely negatively said about the ST but saying how bad the other platforms
>are.

It probably isn't the place but it's not something that bothers myself
much. Your comments are just plain stupid, you accuse people of not
liking it when you say negative things about the ST, uh "Hello?" this
is an Atari newsgroup thats what to expect, if you were a perv and
posted rape stories to a rape help group would you expect a warm
welcome? I personally can accept it if you make a valid point, but you
continue to try and convince people to switch to a platform which
offers little extra to most people, they tell you to sod off and get a
life but you just come back and talk more crap. Accept that the people
here are happy with their machines, I guess that you are ahppy ith
yours great, I've never slagged off the machines like you do claiming
that they are useless and we are stupid for using 80's apps, newer
machines have advantages but they could e so much better, i just wish
that you would realise that.

1458. ANNOUNCE: Antic magazine on the Web

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC
From: savetz@northcoast.com
Message-ID: <savetz-2807960902500001@news.northcoast.com>
Source record: 141144
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,comp.sys.atari.st,comp.sys.atari.programmer

I am happy to announce the launch of the Digital Antic Project. Antic magazine was the premiere magazine devoted to 8-bit Atari computers. Antic, like the 8-bit Atari, has been forgotten by all but a small minority...

The Digital Antic Project is a small crusade to put all of the old issues of Antic (and eventually its sister magazine, STart) on the Internet. I have received permission from the publisher of Antic to make the material available on the Internet for free.

The site currently features the complete text of the first two issues, as well as cover art and memorable ads from the magazine. More material will be added as time permits -- faster if YOU volunteer to help by scanning, HTMLizing, or proofreading.

The site is at http://www.northcoast.com/savetz/antic/dap.html

Your comments, suggestions and help are welcome!

Current contents of the site include:

----- April 1982 - Vol.1 No. 1
Products in Depth - A survey of three word processors
Starting Line - Glossary for the novice
Systems Guide - Memory Map, part one
Pilot - Pilot your Atari
Tape Topics - Some help for cassette owners
In the Public Domain - Chicken
Forth Factory - Multi-tasking in Forth
Assembly Language - A keyboard mask
Editorial
Software Reviews
Useful Tricks - Assembler-editor cartridge
Looking at Books
Kids Korner
GTIA
What's in a Name? ANTIC and Atari
User Notes - how to tell if you have a GTIA chip

----- June 1982 - Vol.1 No. 2
Modems
Dialing For Data
Communications Software
Assembly Language - Move-it
Starting Line - Screen Editing

'Tari Talkers - Speech Synthesis Comparison
Tricks of the Trade - Game Program Techniques
Pilot Your Atari - Large Text
In the Public Domain - Death Star
Systems Guide - Memory Map
Pascal - A First Look
GTIA
Forth Factory
I/O Board
Inside Atari
When the Chips are Down
New Products
Looking At Books
Kids Korner

1459. Help w/broken Falcon Speed?

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <h5Hv-dQ.johnhechtman@delphi.com>
Source record: 141145

I have two Falcon Speed 286 emulator cards, one works - one doesn't. I'd like to get the broken one fixed, I know it's the card, as the 286 chip gets wicked hot and the system locks up - the good card runs cool.

I'm at a loss to find someone, anyone, anywhere, who can help me fix this card. The mfr was Sack in Germany, now defunct. The US distributor was Compo, also down for the count. Toad doesn't know the card, nor does Steve Cohen at Wizztronics - and I'm fresh out of Atari gurus!

I'd like to ffix the bad card as a backup, since the buggers are hard to find! I'll pay any reasonable cost incuding shipping, either inside the US or even to Germany. Can anyone put me in touch with the ex-Sack hardware folks? Or anyone who knows the card? Thanks in advance for your help!

Is it Antic that had a way to improve the 800's video??
If so, please add this to the sight.

1461. Please identify this game . . . I am very desperate!

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC

Message-ID: <31FBF65C.2CC9@rnet.com>
Source record: 141147
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

A few years back I bought an Atari 800 with a tape drive, disk drive, and some software. One of my favorite games that I got was an RPG game on disk. I don't remember its name, but I remember many elements it had. It had a first-person view and one-key commands. You would start out by rolling for your character and naming it. You would then go into a shop where you could buy weapons, etc. (including a gun) and put money there for safekeeping. After you leave the store, you start outside the dungeon where you can leave and retire your character. I think there was a mailbox there, too. Some of the things in the dungeon include a troll bridge that you could pass by either giving the trolls a large block of gold or by lighting a match and finding a hidden tunnel (you could fight them, but you would always lose), a room where the walls close that you stop with a metal bar (which gave you the message "HOLY STAR WARS!!!!!"), an arena where you can pick up gold by fighting enemies, a manual-making machine, a ruby so hot you needed gauntlets to pick it up, a giant underground spider web, and a really annoying menu that popped up when you were carrying too much weight (but you couldn't do anything, so it prematurely ended the game). It also had an included sheet of hints coded in something similar to the 1-A, 2-B, 3-C, etc. system. Can anyone help?

My WWW page has been updated! Finally! You must see it!

"You will find that many of the truths we hold dearly depend greatly on our own points of view."

Have you tried to use programs like Diamond Edge or Checkdisk3??
What did they tell you ?? I think you should backup your harddisk
and reformat it... its only 20MB so it shouldnt take so long...

1463. Stalker Help Please

Newsgroup: comp.sys.atari.st
Date: 1996-07-28 00:00:00 UTC
From: fl@zap.io.org
Message-ID: <4tepdq$5n2@zap.io.org>
Source record: 141149

All of a sudden, my copy of Stalker (latest version) is acting funny during Zmodem uploads. It seems to have an error every 1024 bytes, which, oddly enough, is the same size as the upload buffer I have set with HSMODA07. I've tried reinstalling my copy of Stalker from backups, reinstalling my old HSMODA06 programs... Nothing seems to work.

Other terminal programs seem to have no problem with uploading files (Starcall or Connect) so I'm pretty sure that the problem is in Stalker. Downloads are fine, it's just the uploading and this is a problem with several BBSs I've tried and with my ISP.

Have I inadvertently reconfigured the Zmodem protocol in Stalker by installing HSMODA07? I'm running a TT, TOS 3.06, with a 14.4 modem (which has never given me any problems). I'd be grateful for some help as this one has me stumped.

Regards,

Dick,

Some weeks ago I newgrouped alt.binaries.atari and alt.binaries.atari.d; both have shown up at various servers, but NOT at my service (which feeds through wolfe.net). Would it be possible to get you to newgroup the 2 groups? Perhaps wolfe.net will pay heed to a more "official" approved line...

Thanks!

phil4@phil4.demon.co.uk barked in COMP.SYS.ATARI.ST on 27 Jul 96:

>> It works at 115200 on Modem2, with NO other patches or flow control
>> programs. You need a "Y"-adapter cable to copy CD and DSR from Modem1,
>> and set SCC.PRG for M1EMU, but otherwise, nothing special.
p>
p> ahhhhh a "Y"-adapter cable... what's one of those ??? maybe this is
p> why it didn't work ! :)

Look at the pinout diagram for Modem2 that is in your Mega STe manual; you'll see that Carrier Detect and Data Set Ready have been left off of that port. Another brilliant Tramiel operation. %^(

The "special" cable simply plugs into both AUX: and Modem2, and connects the CD and DSR leads to the output along with all of the signals from Modem2.

Hmm, just looked at my own manual. The port I am plugged in to is Serial2 (according to the book; HSmodem says it's Modem2, I think) and the "missing" leads are Carrier Detect (CD), Clear to Send (CTS) and Ring Indicator (RI). My "Y" cable copies over CD and CTS from Modem1, and the M1emu mode of HSmodem makes it work.

> > survive YOU.

Roger was given a severe telling off from the Wellington City Council -
not the Government of NZ. (his address "@wcc.gov.nz" may have given you
that impression, however)

And he still acts like an armhole at times - posting some self-important
twaddle, and sometimes the obvious troll in the nz.* groups.

But, seeing as he now has to pay for his net time, unlike previously when
he used the "free for the public" net terminals provided by the
Wellington city council, his posts are fewer and farther between.

(The Wellington city council no longer have any "free for the public"
terminals some time ago - six months or so after we "evicted" RS from the
Atari newsgroups)

BTW: I'm an Aucklander, so my recollection of events in a city 650km away
from me (that's about 400 miles, for the metrically-challenged among you)
may be a little off.

1 comp.lang.basic.visual
comp.lang.basic.visual.misc

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.misc.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.announce. The
full report can also be found in alt.nocem.misc and alt.retromod.
Look for AR512 in the subject, or, if your reader supports it, use
this URL: news:ARMM-Report-512@redpoll.mrfs.oh.us

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated akr, biz, comp, misc, news, rec, or sci
(except for comp.binaries.apple2, comp.bugs.2bsd,
and rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

If you must post a binary to Usenet, please post it *only* to an
appropriate binaries newsgroup such as alt.binaries.misc, and do *not*
crosspost it to non-binaries groups. Then, if you like, post something
in the appropriate discussion group telling people where to find the
binary in the binaries group (a pointer to the binary). This will
permit news administrators and users to decide for themselves whether
to receive the binary files.

Please direct public feedback to news.admin.net-abuse.misc and private
feedback to red@redpoll.mrfs.oh.us. Thanks.

Best wishes,
Dick

The LAN/serial ports are _much_ faster than the MIDI port. MIDI operates at about 32k, while the LAN port on the Falcon is 115k2.
I use the LAN ports to connect a TT030 and MegaSTE here, and it works very well sharing the hard drives with MiNTNet and NFS. In fact, you should be able to run MiNTNet on your Falcon030 and some sort of PPP software on your Macintosh and ftp the files over (running an ftp server on the Falcon030) or if you can get NFS for the mac, you could share hard drives without having to use MagiCMac at all.

Hi

As the subject says I was wonering if somebody knew something about what=20
is happening with TempusWord?
The version I am using is 2.91 but CCD promised to have a verion 3.0 out=20
early 1996 so I=ABm still waiting.
Anything?

f> with HSMODA07. I've tried reinstalling my copy of Stalker from
f> backups, reinstalling my old HSMODA06 programs... Nothing seems to
f> work.

Large upload buffers are not usually a good idea; try reducing the buffer
size to 16 bytes (or 256 if that's the minimum in HSmodem; I think mine's set
at 16 though). I suspect that STalker's internal Zmodem protocols are fast
enough to flood the modem, while the other program(s) you have tried are not.

Also check to make sure you are using RTS/CTS ("hardware") flow control,
/not/ XON/XOFF - the latter is too slow for modern high-speed modems.

It's not totally clear just what's happening when you try to print,
but one thing I have noticed is that Oasis 1.35 greys out the print
option in the menu if the printer isn't *on line* when the program is
launched. You need to quit, make sure the printer is on line and then
start Oasis again.

>I have not tried Oasis 2 yet as I have been waiting for some of the
>bugs to be ironed out, and I am also a bit miffed that as a

Snap! You'd think that the least you'd get for the money was losing
that dratted message...

>Can anyone can offer any advice on this problem, or know of any other
>documentation that I should have, or whether Oasis 2 would help?

AFAIK the help file is all the documentation there is.

No difference. Stating that Mac rag market added a new publication and a ST user made a snob comment that it wasn't 500 pages. Atari rags such as ST Log were cool when I had my Atari 8 bit and thought of upgrading. I ended up with an Amiga. Computer mags have come along way by offering choices for all kinds of readers. Look at the mag section and look for yourself.

> cos you were complaining about the size of Atari mags being 60 pages

What I was complaining about is the cost. Does paper cost that much? Desktop publishing is commodity.

As for mac rag size, you need to add up the combined pages.

> Maybe it is like that in the States, but here in the UK, most DEmos
> need to be installed from the CD to the hard drive.

You need to install OpenDoc and Cybordog on the HD. As for game and many utilities that is not the case.

I have all the Antic and STart issues w/ Antic, and thought about doing this myself. Unfortunately, My friend with a nice flatbed scanner is off to CA visiting a girl he met on IRC. <g> I will be glad to help when he returns. I had thought about digitizing every page until I found out how long that would take, and also how much free HD space I have compared to how much this would take. Also, I need some very good OCR software to come into my possesion, one that does fonts, text placement, line drawing, etc etc.. The package included with his scanner needed alot of help when we tried to ocr the table of contents page of one antic mag.

I would love to see a digital version of every Antic mag online, and catalogued to boot! Both text versions and the actual digitized page, large enough to be readable of course. Any other suggestions? (so far we are dreaming unless someone can donate server space(digitized pages of info get large fast.)

Rick

Reread the first part of the thread, we got server space covered
already...oops.... :)

What image dimensions do you want for the covers and ads? also, if we
were to digitize every page for _reading_, what image dimensions do we
want? All my mags are almost pristine in condition, provided enough
time I could put them all online, but are there other altruistic
individuals with both a scanner and a large collection of Antics (and
Analog!)?

Anyone know of a program that takes a digitized magazine page and
automatically html-izes it? Now that would be cool.

Rick

a> aaaarrgghh!!

There's certainly a POOLFIX4 and a POOLFX92, but I don't think they have any
relevance to Magic 4 - they are TOS fixes and Magic isn't TOS...

>> >> Is MagiC 4 not fully compatible with NVDI 3.01?

>> versions of NVDI from v3.01 up to v4.0x to fix other errors which are
>> all fixed in v4.10 (it's not an upgrade to v4.1 in itself though).
a>
a> Where is this program - I have 3.01 and would certainly like to upgrade
a> to 3.02.

I explained that badly. There are bugs in all versions of NVDI from v3.01 to v4.10 which are fixed by PATCH_NV. The patch doesn't upgrade from one version to the other though. I've got NVDI v3.01 and v3.02 in both standard and Matgraph versions which I've patched. Each gave different reports of what was being fixed, which I documented somewhere but I can't locate that info atm.

The archive that I found it in was called NVDIGUID.LZH which contains NVDI 4 programming guidelines in english. I think I got it from the CIX conferencing system, but it must be available elsewhere too and PATCH_NV is distributable outside of this archive.

~~~~~~

NVDI 4.1 Programmer's Guide
==========================

05.03.96 (preliminary draft)

(c) 1995-96 by Wilfried Behne

Prologue

This preliminary documentation of NVDI 4 is divided into the parts

- Data Types and Structures
- NVDI Version
- List of VDI functions
- Drivers and Management
- Color Settings
- Writing Modes and Clipping
- Lines and unfilled Graphic Primitives
- Filled Graphic Primitives
- Markers
- Text Output with Bitmap and Vector Fonts
- Raster Operations
- Input functions
- Text Mode and VT52
- Printer specific functions
- Sample Bindings

No responsibility or liability is taken for errors or inaccuracies in this documentation.

Terms

This documentation is public domain, you can copy it freely and use it. Commercial distribution is forbidden.

NVDIGUID.LZH consists of the following files:

- NVDIGUID.TXT
- MAPPING\MAPLIKE4.MAP (SPDCHAR.MAP for Speedo 4.2)
- MAPPING\MAPPIN01.IMG (Mapping in NVDI 4.1, page 1 - 300 dpi)
- MAPPING\MAPPIN02.IMG (Mapping in NVDI 4.1, page 2 - 300 dpi)
~~~~~~

- MAPPING\MAPPIN03.IMG (Mapping in NVDI 4.1, page 3 - 300 dpi)
- MAPPING\MAPPIN04.IMG (Mapping in NVDI 4.1, page 4 - 300 dpi)
- MAPPING\MAPPIN05.IMG (Mapping in NVDI 4.1, page 5 - 300 dpi)
- MAPPING\MAPPIN06.IMG (Mapping in NVDI 4.1, page 6 - 300 dpi)
- PATCH\PATCH_NV.TTP (Fixes for NVDI 3.x)
- DRUCKEN.TC\... (Example for true color printing)

The archive may only be copied including these files. You are allowed to modify the files for your own demands, but you are not allowed to spread the modified files.

[cut 200+k of text <g>]
~~~~~~

And from PATCH_NV's README.TXT

~~~~~~
Patch_NV, Version 1.02
======================

Haftung
��������
Trotz sorgf�ltiger Entwicklung und umfangreicher Tests k�nnen wir keine Gew�hr �bernehmen, da� die Software Patch_NV.TTP unterbrechungs- und fehlerfrei l�uft. Die Haftung f�r unmittelbare Sch�den, Folgesch�den und Drittsch�den ist ausgeschlossen!

Beschreibung
����������
Patch_NV korrigiert kleinere Fehler in NVDI 3.00 bis 4.10.
(Patch_NV corrects smaller errors in NVDI 3.00 to 4.10).

Bedienung
��������
- Legen Sie eine Sicherheitskopie von NVDI.PRG an
(Make a backup copy of NVDI.PRG)
- Ziehen Sie NVDI.PRG auf PATCH_NV.TTP
(Drag NVDI.PRG onto PATCH_NV.TTP)

Weitergabe
����������
PATCH_NV darf frei kopiert und weitergegeben werden. PATCH_NV darf auch Programmen oder Programmpakten beiliegen, die NVDI und Vektorfonts unterst�tzen. In jedem Fall mu� PATCH_NV aber komplett und mit den folgenden Dateien weitergegeben werden:

- PATCH_NV.TTP
- README.TXT

Es ist nicht erlaubt, PATCH_NV.TTP oder die dazugeh�rende Datei README.TXT zu ver�ndern.
~~~~~~~~~~~
~~~~~~~~~~~

I can UUE this Patch-nv archive to you if you like, but I'm quite sure I'm about to be inundated with requests to do the same for others. Can someone give me an ftp site that's likely to actually be both accessible and updated before the end of the year and I'll try to upload it there (Hallvard?), unless someone can confirm a location where it already exists.

Regards, Harry Sideras - UK Association of Atari User Groups

r>
r> The big question is, will it be available through newsagents or is it
r> subscription-only?

Not a big question at all. Quite a little one... <g>

AIUI it will be subscription-only, but I'll let Mike expand on that because I don't have any involvement in it whatsoever.

From my own *personal* point of view, I'd like to say this:

There is no point putting pressure on the people to make this a newsstand magazine if the economics aren't there. Magazine distributors (WHS, Menzies etc) long ago decided it wasn't worth taking an ST mag (either STF or AW) and take up shelf-space when they had zillions of other titles that they could sell more of and were being pushed to take. Even Future/Pearsons, with all their muscle, couldn't override this. This is self-evident.

For any new title to go newsstand they'd have to plan to print copies just so that they could be pulped, because distribution will never ever target all the copies to exactly where they are going to be sold. To insist on this is pointless.

It's about time some realism hit Atari owners that in order to be supported then we'll have to give some commitment ourselves or be prepared not to be supported at all. Mike's obviously been prepared to go out on a limb himself and has gathered some familiar names about him AIUI who are genuinely committed to supporting the platform in all manner of ways.

If what I hear is right (and it may not be, so listen out for firm news) then the initial subscription is going to be 3-months only. If that's the case then it's not only churlish not to provide that initial commitment, it's also self-defeating. There aren't too many options out there, aside from ST Applications (subscription-only from the FaST Club) or Current Notes (subscription-only imported into the UK from Canada by Danny Bhabuta)

Personally, I'm just waiting for an address to send a cheque to. 9ukp for 3 issues (7.50 for the unwaged) is more manageable than any other mag for a few years.

I'd also urge any User Groups out there to take a straw poll among their members on who'd want to subscribe and get that info back to Mike. Spread the word among those who aren't online. I'd also suspect that firm non-UK distribution would be accepted - if in doubt, ask.

Can we all make a go of this one without back-biting please?

Regards, Harry Sideras - UK Association of Atari User Groups

: ST Format for there advertising,

I just purchased a cheap ST for sequencing music on, and hoped to get a copy of ST Format so I could find where the PD libraries are so I could get some useful utilities and so on. The local newsagents seem not to have been carrying ST Format for a while, so I wouldn't have been able to get a copy easily, even if it hadn't folded. Anyone know of any good PD libraries?

It's not really a CAD package as such. It is a ray tracing / rendering
/animation package, although there is a design studio along the lines
of CAD3D.

It was produced by Digital Arts, if memory serves correctly,

Hope this helps,

Steve.

Well in my opinion, and after dealing with PD Libraries for many
years, I think FloppyShop is by far the best, not only do they have an
extensive library but also a help line and a catalogue that contains
large detailed descriptions of every item, as a customer you also get
a free update to there catalogue, usually by post and on paper,
It really is a top quality service,
As a programmer I can also say that it is the only pdl I have used
that gaurantees a reply to every submission and every letter you send
to him and his vouchers for submissions ideas work great,

I have not dealt with every pdl, but quite a lot:)

Hi,

For sale in The Netherlands:

Falcon030, built in Lighthouse Tower, 200W Power supply built in,
(ready for a bare SCSI2 HD. One is actually built in, but I want to
keep that.)
65M Conner IDE 2.5" HD
BlowUP FX board, 40MHz, 4M FastRAM (so total of 8M RAM)

Original software:
Turbo C 2.0
Pure C 1.1
NVDI 3
N.AES
Lots of shareware. Complete MiNT setup, complete TeX (LaTeX2e) setup if
required.

Books:
`Het complete ATARI ST boek', Sybex (Dutch)
The Atari Compendium, 2-part version

Everything together HFl 2000,- (DM 1750, UKP 750, 1200 US$).
I'm prepared to negotiate about shipping costs.

Mail me for more information.

Regards,

I will be doing that. Unfortunatly, the Antic disks didn't start until 1984, but the magazine started in 1982. So there are about 18 issues of diskless code. :(

1498. Re: Latest AHDI/HINSTALL/SHDRIVER.RAW?

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: Aardvyrk@cris.com
Message-ID: <4tji6b$mi0@herald.concentric.net>
Source record: 141079
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

John Perez (jperez@Hawaii.Edu) wrote:

: I am a Falcon user, and am looking for the latest release of the
: Atari Hard Disk programs AHDI, HINSTALL, HDX, and the SHDRIVER.RAW file.
: I have actually run across an AHDI that it version 6.04 (I believe) but
: the latest SHDRIVER.RAW that I have seen is 6.00.

John,

The latest versions that I installed during my ongoing HD woes
(see previous message) are AHDI 6.061, HDX 5.04, and HINSTALL 5.00. There
may indeed be a later version of the latter two, but that's what I came up
with after a night of European FTP--something like Russian Roulette, but
not as painful.

I believe the only extras HINSTALL needs is to have whatever
driver you want to use copied in the same dir as SHDRIVER.RAW. From there
it's placed into the root dir as SHDRIVER.SYS. I don't purport to know
the inner workings, but this is what I've observered so far.

: My concern is that one of the versions of AHDI/SHDRIVER had a bug
: that would permit wiping out other partitions during direct-to-disk audio
: recording, and I don't know which version that is. I assumed that the
: latest revision is free from this problem.

I remember a small thread about a month or so where someone
complained of a HD bug, and the reply was something to the extent of "Get
AHDI 6.061." So later is usually better, and the more decimal places, the
more bugs you can assume were fixed. Unfortunately, Atari never got to
release the much publicized AHDI 6.06131415628002a Rev F.

: Any information or recommendations would be appreciated. I am
: currently able to use ICD Pro or HDDriver, but several programs that I use
: recommend Atari's drivers, so I would like to try those out.

I just broke down and ordered HDDriver from Chris at Computer Direct. I
need the larger partitions, and the aforementioned and ICD Pro both claim
to be fully AHDI compatible. According to Chris, there is a small bug
with the Atari SCSI bus and CAF with HDDriver as it stands now, but only
when recording long uninterrupted streams of audio, and only with some
machines (mostly early Falcs) and of those, a CAF patch solves 90% of
them.

I decided to go with HDDriver rather then ICD Pro because it seems that
the author is extremely aggressive with releasing updates. They both
looked like fine progs, but I had to choose one, and apparently HDDriver

can do large partitions as well.

: Also, I am assuming that HINSTALL uses SHDRIVER.RAW to create the
: boot drivers when it is executed, is this correct?

See above, about four paragraphs up. I can't answer for correctness,
though.

: Aloha,
Aw rite!

1499. MSDOS incompatibility with TOS 1.62 (STe)?

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <31fce9566c7340@sn.no>
Source record: 141080

Does TOS 1.62 have problems with MSDOS disks?

The reason I ask is because an STe with TOS 1.62 installed seemed to "mess up" MSDOS formatted disks so they couldn't be read on an Apple Mac.

I have an STe myself, but with TOS 2.06 installed and it seems to work just fine with MSDOS disks. I format the disks with "Hcopy" to be sure they'll become 100% MSDOS compatible, and that's just what I did with the 1.62 based machine as well. Strange....

I had brought with me some disks with Macintosh software on them (which I had downloaded from the Internet and saved on MSDOS formatted 720K disks). They seemed to work just fine on the Mac, but when I tried to transfer some files from the TOS 1.62 STe the Macintosh computer just couldn't read the disks, so it seemed that whenever a file was *written* to the disk, TOS would mess it up somehow. I even tried transferring some files from the working disks I had over to the 1.62 STe and back to a new disk (just to be sure that the file wasn't the problem), but no go- the Mac couldn't read the disk.

So, my question is: does TOS 1.62 have some quirks regarding MSDOS file formats? Can anything be done about this?

1505. Re: STF DEAD

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: sinclap2954@cobra.uni.edu
Message-ID: <1996Jul29.003934.1@cobra.uni.edu>
Source record: 141086

Rich barfed the following..

> I am deliberately quoting far too much here (sinclap's comments are included,
> therfor I have quoted too much <G>).

So you are in violation of your self imposed rule. What a hypocrate..

> At this point, Petey-boy is in clear conflict with the charter for this Big 8
> newsgroup; he insists of posting advocacy issues in a non-advocacy group. I
> suggest that every reader of the newsgroup send a complaint (quoting the
> exchange between Danny and sinclap) and noting sinclap's refusal to adhere
> to the charter, to root@uni.edu with a copy to the news.admin.net-abuse.misc
> newsgroup.

You wish I am in conflict with the charter. Richy you're kill file must not
been working to well. Richy is going to cry baby to the postmaster again. Why
not use another kill file if you are so annoyed? That way you do not have to
bare a lecture on the first amendment, it's virtue and important section of the
constitution. You are a constitutionalist or still a loyalist to the ex mother
country?

Rich's name deleted

I have 2 1040 STs, one of which has the RF output for a color TV
I have one working monochrome monitor, and one that doesn't work
I've got some business related software and some games I'll throw in
I've also got sn Epson FX-85 printer

Make me an offer!

I seem to have missed the original post, but I have around 20 misc Antics and STarts, (including the 1st issue of STart in great condition!) along with 1-3 each of misc other mags. (ANALOG/ST-Log, Atari Explorer, ST X-Press, Compute's Atari ST, ST Applications). I have no disks for any of them. I have one of those monochrome Migraph hand scanners /w OCR Jr. brand new from Toad, and a good knowledge of HTML. Soon as I get this hard drive working I can give you a hand. (need ACSI cable...)

>don't have any involvement in it whatsoever.

I believe Mike already explained in a previous post? :)

>From my own *personal* point of view, I'd like to say this:

>There is no point putting pressure on the people to make this a newsstand

But no one has?

>magazine if the economics aren't there. Magazine distributors (WHS, Menzies
>etc) long ago decided it wasn't worth taking an ST mag (either STF or AW) and
>take up shelf-space when they had zillions of other titles that they could
>sell more of and were being pushed to take. Even Future/Pearsons, with all
>their muscle, couldn't override this. This is self-evident.

Eeeerm ST Format is currently on sale in J.Menzies and quite a few
other outlets in my area Harry, considering I only live in a small
town, I can walk into town NOW and find STF in at least two shops
including Menzies ????

>For any new title to go newsstand they'd have to plan to print copies just so
>that they could be pulped, because distribution will never ever target all

Absoloutly correct Harry, it would be silly to even consider it , the
only chance of succes would be subscription and in my opinion damm
good advertising through not only the internet, but all pdl's and the
many current diskmagazines and user groups etc,

>the copies to exactly where they are going to be sold. To insist on this is
>pointless.

The guy only asked if it was going to be??? your being a bit harsh
on all of us, pre-empting what might be said ?
I totally agree with you mate, as I would think do all the ATARI
comunity,

>It's about time some realism hit Atari owners that in order to be supported
>then we'll have to give some commitment ourselves or be prepared not to be

As far as I know, this has already hit us, who exactly are you aiming
these comments at Harry ? I have not seen any postings in this
newsgroup even remotely suggesting otherwise,

>supported at all. Mike's obviously been prepared to go out on a limb himself
>and has gathered some familiar names about him AIUI who are genuinely
>committed to supporting the platform in all manner of ways.

Yes we know, and everyone is supporting him, no one is complaining
and we all want to help :)

>If what I hear is right (and it may not be, so listen out for firm news) then
>the initial subscription is going to be 3-months only. If that's the case

Yes thats what I hear :)

>then it's not only churlish not to provide that initial commitment, it's also
>self-defeating. There aren't too many options out there, aside from ST
>Applications (subscription-only from the FaST Club) or Current Notes
>(subscription-only imported into the UK from Canada by Danny Bhabuta)

"churlish" ?, who is being churlish, who is not supporting the idea,
who is not showing this initial commitment, I really do think you are
jumping the gun here a bit, I read every single posting to c.s.a.st
(sad I know<G>) and have not seen anyone not supportive?

>Personally, I'm just waiting for an address to send a cheque to. 9ukp for 3
>issues (7.50 for the unwaged) is more manageable than any other mag for a few
>years.

we are all awaiting that and we all want to subscribe,?

>I'd also urge any User Groups out there to take a straw poll among their
>members on who'd want to subscribe and get that info back to Mike. Spread
>the word among those who aren't online. I'd also suspect that firm non-UK
>distribution would be accepted - if in doubt, ask.

agreed, i already put forward to Mike the notion of contacting
diskzines and other none modem outlets to spread the word, you are
correct :)

>Can we all make a go of this one without back-biting please?

Hey Harry! <smile> either I missed some postings or you got out of
the wrong side of bed today mate ???

I agree with all your comments re: supporting this venture, i do not
however agree with your comments aimed at comp.sys.atari.st , no one
is being "churlish" , niether is there any signs of "back biting", you
seem to be complaining about something YOU think might happen, from
what I can see, it certainly has not in c.s.a.st

PS...Hi Harry, not falling out mate, just suprised at your comments

1512. OASIS 1.35 Printing problem

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: phil@goldings.demon.co.uk
Message-ID: <838744398_OASIS_@goldings.demon.co.uk>
Source record: 141093

I have been unable to get the Print function in OASIS 1.35 to work. The only documentation I have on OASIS is the built in help information. I have tried it without any accessories or CPXs loaded but this does not help. I do not have trouble with printing from the desktop or other programs that I use, eg. Everest, Marcel, Works, 1st Wordplus, Masterbrowse. I have a Falcon 030 with 4M of RAM and a 120 MB hard disc.

I have not tried Oasis 2 yet as I have been waiting for some of the bugs to be ironed out, and I am also a bit miffed that as a pre-registered user that I have not received notification of its release and I still have to suffer the registration message every time I start Oasis.

Can anyone can offer any advice on this problem, or know of any other documentation that I should have, or whether Oasis 2 would help?

Hi!

There is a conguration file /etc/syslogd.conf for the syslog daemon.

Just change /dev/console in that file to an other file name or remove
the lines containing /dev/console.

Example of my /etc/syslogd.conf:

*.err;kern.debug;auth.notice;user.none /dev/console

Message-ID: <96211.183348STIRRE31@MAINE.MAINE.EDU>
Source record: 141099

Well, I got my Falcon repaired at Wizztronics. Thanks for all of
the advice. They did a great job and everything seems to be
working. I have a questions about the microphone port on
the Falcon. What kind of connector do I need? Is there an
adapter to hook up, say, an Apple Plaintalk microphone to
the Falcon? Steve Cohen from Wizztronics said that I needed
a slightly smaller plug. Thanks for any advice and excuse
my ignorance (in my defense, the Falcon manual is not very helpful).

A quick and easy way to add plain text in columns is to use the <pre> tag
(indicating preformatted text). Use the <H> tags for headlines, and
inline graphics, and the pages can look just like the original pages
without much storage overhead.

From: bili6745@mach1.wlu.ca
Message-ID: <DvBJt6.8Ay@info.uucp>
Source record: 141102

I seem to be having problems with printing on my Falcon with NVDI 4.10 and AW installed. My set up did work for me at the end of the school year but seems to no longer work now. When I try to go to page set up the system freezes. When I try to print I get 3 bombs for about a second and then 4 bombs.

Does anyone have and idea why I could be having this problem?

If it helps, this is the setup of my auto folder and acc's:

auto acc's
Blow Boot BlowAcc
FDI_Init xcontrol
FPatch2
FXDrive
NVDI (4.10)
WDIALOG

Thanks in advance,
Keith.

Sounds like a bad 286 chip. If it's socketed, life is simple - just get a new
chip and slap it in there. If it's surface-mounted, life sux.

g> ideas on how to prolong the life of this drive while I save money for a
g> new one? Also, does TOS 2.06 have any known problems/limitations with
g> hard drives?

We started having a similar problem with an SH204 here recently. Some experimentation indicates that the problem is most likely in the power supply (we connected a spare PS from a Mega STe instead of the internal one and the problems disappeared). You might try that.

Also, since it's a Supra, I would suppose you have the usual Supra SCSI host adapter in the box. In that case, all you need (if the PS is still good but the mechanism is failing) is a new mechanism; you should be able to pick up a surplus SCSI-1 120 meg drive for something on the order of US$20.

Finally, there are no problems with TOS 2.06 and hard drives, other than the 40-folder limit. FOLDERxxx still works to fix that.

1525. Re: ANNOUNCE: Antic magazine on the Web

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: Eric Sokolowsky <esok@cs.byu.edu>
Message-ID: <31FD2977.2781@cs.byu.edu>
Source record: 141106
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,comp.sys.atari.st,comp.sys.atari.programmer

I would love to help out on this project. I would be willing to HTML-ize text (as long as it can be scanned in and converted to text with some OCR previously). I think that articles should be done in HTML format, with illustrations as scanned-in pictures. I could even crop images to place in illustrations. Too bad I don't have convenient access to a flatbed color scanner. :(However, I have most Antic and Analog magazines.

This is a really good idea! Way to go!

1526. Latest AHDI/HINSTALL/SHDRIVER.RAW?

Newsgroup: comp.sys.atari.st
Date: 1996-07-29 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <DvBnJz.55H@news.hawaii.edu>
Source record: 141107
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Summary:
Keywords:

Greetings,

I am a Falcon user, and am looking for the latest release of the
Atari Hard Disk programs AHDI, HINSTALL, HDX, and the SHDRIVER.RAW file.
I have actually run across an AHDI that it version 6.04 (I believe) but
the latest SHDRIVER.RAW that I have seen is 6.00.

My concern is that one of the versions of AHDI/SHDRIVER had a bug
that would permit wiping out other partitions during direct-to-disk audio
recording, and I don't know which version that is. I assumed that the
latest revision is free from this problem.

Any information or recommendations would be appreciated. I am
currently able to use ICD Pro or HDDriver, but several programs that I use
recommend Atari's drivers, so I would like to try those out.

Also, I am assuming that HINSTALL uses SHDRIVER.RAW to create the
boot drivers when it is executed, is this correct?

Aloha,

John Perez

From: hummus@pipeline.com
Message-ID: <4th8h2$ggi@news1.t1.usa.pipeline.com>
Source record: 141156

I'm looking to acquire a Mega STe with TOS 2.06 or a Falcon (I missed the Atari warehouse sale a couple months back) - I would prefer to get a hold of either one by way of a trade of some or all of my equipment listed below. If however there is a Falcon or Mega STe owner out there not interested in taking some/all of my stuff as part of a package deal, then I would purchase the Mega/Falcon straight up. Here's a rundown of my STuff:

Atari 1040STfm with TOS 1.2, upgraded to 2.5 meg RAM and has internal floppy
Atari SM124 mono monitor
Atari SC1224 color monitor
Atari mouse
Monitor Master
Mouse Master
Supra 14.4 FAX/modem
ZOOM 24/96 FAX/modem
Spectre GCR with Mac ROMs already installed
Seagate FA*ST ICD 85 MB Hard drive
Tons of software: utilities, telecom, games etc.

All components are in working order

Again, I'd most prefer to part with my equipment as part of a trade for a Falcon or Mega STe, but if you've got a Falcon or Mega for sale and don't want to buy any of my stuff, or alternatively if you'd like to buy some or all of my stuff but don't have a Falcon or Mega to sale, please send mail to

hummus@pipeline.com

Thanks...

>Thank you,
>Martin Quinones

If your Supra HD has a daisy chain SCSI out port, you should be able to. I have a Syquest EZ 135 which I really love. It's much quieter than any of my internal hard drives, pretty fast, rate HD rates it at like 1542 transfer rate @ 22 MS, but it seems faster than that to me. EXTREMLY QUIET! I use mine on any of the following computers with no problems.
Atari TT 030 SCSI port
Atari Mega ST4 with ICD Link I
486DX4/100 with 8 bit SCSI card.

The drive is very nice.. I just wrote a review of it last night for a comuter newsletter. I recommend it. Media cost is great, much cheaper than my Syquest 44 drive cartridges. Each cart runs about $19-22 depending upon the source for 135 megs.. That's about 14-18 cents per meg and it sure beats backups to floppies for my 540 meg SCSI drive on the Mega 4. 540 megs divided by 720k floppies to just to ??mm much time and trouble to mess with.

Hi all

Firstly thanks to Harry for spreading the word about the new Atari magazine. I'm sure he didn't mean to step on anyone's toes, it was just that so many people are quick to pull down Atari magazines.

Anyway, the good news is that I have just posted a NEW version of the press release. The OLD one had a couple of minor errors, so ignore it.

The new version has extra information which should answer most people's queries, he says hopefully!

Feel free to contact me if you want further info, but I won't be able to reply until after the weekend due to other commitments :-(

Very strange. I think somebody else has already said there are problems
somewhere between Demon and Wintermute. You might get a clearer picture of
what's happening if you trace the route to mailhost.wintermute.co.uk, which
is where all stanley.wintermute's mail should be going. In the meantime, I
would try bouncing your email off a completely unrelated host, e.g.
chas%stanley.wintermute.co.uk@ucbvax.berkeley.edu
or any machine on the Internet which relays mail and you know to be reliable
(I make no claims for ucbvax in either of these categories).

All you need is a 50 pin scsi out port to hook up the EZ135 to. You already have a host adapter and the EZ135 come with it's own power supply! I just added an EZ 135 to my scsi chain by cutting a hole in the back of my D&P hard drive case and replacing the 50 pin ribbon cable that connected the 2 hard drive mechanisms in the case to the host adapter with a longer one and added a 50 pin scsi out port to the end of it that fit through the hole I had made. Next step is to connect up the EZ 135 with the included 50 pin to 50 pin scsi cable, powerup and use whatever software that you like best to partition the drive, and away you go!

:

Hi Ronald,

Version 1.32 contains support for two more formats. To encourage you to register (it's a measly 7UKP - about 11USD I think), the shareware version displays mono, the registered version runs in full colour (it's very, very good).

Registrations worldwide can be done through me at the address in the .doc file. I recommend it - I registered mine last week and it is well worth the money.

Re: the annoying reg message in Oasis 1.35E

Whe it comes up, just hold down the Alternate key plus one other, and it will go away. In fact, holding down almost any two keys does the same :-)

I too registered for Oasis, but the distribution of Oasis 2 was shambolic. When I eventually got it, I had big problems, so continue to use Oasis 1.35. I have been told that the latest Oasis 2 release fixes most problems, so I will give it a try when I have the inclination/time.

>From what I have seen of tos is a cheap knock off of the Mac OS below system 7.
>There are no equivalents to opendoc, quicktime vr, powertalk, open transport,
>publish & subscribe,

IT's not really a cheap knock off of the MacOS, they were released at
pretty much the same time and by Apple's own admission MacOS was
copied from Xerox anyway so I don't think the theif should be calling
the other theif a theif (thats assuming that TOS was the copy)!

>> You are doing your cause no good whatsoever, I don't think that you

More speed *IS* a waste if it doesn't do more, which was my very point.

>If the rest of the world adopted the St strategy, we still would be
>playing Time Bandits. I believe you state this because the ST line will never
>catch up and has made you arrogant of the Intel inside industry.

I wouldn't ever expect it to catch up with the Mac never mind the PC.
What worries me is that the rest of the market refuses to adopt the
Atari's strengths. The Atari failed because Atari failed to move on
and just kept the same machine for far too long and filed to support
it properly, the actual machine is well designed and the Atari
comminuity makes some incredibly polished software. It's a real shame
that Atari never moved on as someting great could have been possible.
I am however confused about what you mean about me being arrogant to
an industry, can you expand on this?

>If you want to spend $3000 on 040 hardware that is your business.

Absolutely no chance! I have said before that I won't be bying another
Atari and wouldn't recommend anyone to do so because eventually they
will be useless when you need spares of new peripherals (OK ATM
thou'), the power of an 040 Tos machine I would imagine to be quite
incredible but they are made for a niche market, I don't think even
you would take the piss out of a top of the range SGI machine because
they don't sell many units, it doesn't mean theyre crap and the ratio
may not be great, the price and low fuel efficienc of many supercars
means that they sell in huge numbers but does not mean they are worse
than a Fiesta.

>We in the mac/pentium markets pay much less for power.

Yes, *POTENTIAL* power, a fast chip doesn't mean a fast machine, for
that you need tight and fast code and you mostly don't have that.

>PowerComputing on Aug.5 at
>MacWorld will bring out to the market a Mac OS box utilizing the PPC 603e

>The ST is considered compact because it hasn't advanced to a new level. There
>is still no equivalent of open doc, cybordog, quicktime vr, powertalk, open
>transport, quickdraw and much more. Nice thing is that the other platforms
>have it both ways such as high quality PD and awesome 90's apps.

Apart from Opendoc none of that really interests me much. Again the
Mac/PC apps are good, and when running on the higher spec machines
(costing much more than an ST) they are generally a fair bit better,
my point is that by following or adopting the Atari coders and their
style the could be an incredible amount better, far better than you
really could possibly imagine.

>I agree that the ST is fine for email just don't try using Netscape.

Netwho? Is that like CAB?

BTW Pete congratulations, your postings are becoming quite a bit
fairer than before, you're listening and giving fairly good answers.
It's good to know that we don't reply to your posts in vain anymore.

RG> : I stopped buying and reading CS a couple years ago because
RG> they said they : were going to drop the Atari column. Is it
RG> still there? Got the August issue a few days ago. Tried
RG> looking for it, after not looking for it for awhile. As far as
RG> I knew, they had a little place in their classifieds, but
RG> there's no classifieds in this issue, neither is there
RG> something mentioning the Ataris at all.

They got rid of all computer coverage other than pc-clone & token Mac coverage several years ago. They got rid of the classified section, oh, a bit over a year ago.

They stated once that they got a lot of mail from Atari owners when they dropped the 'orphan' computer sections years ago, but they didn't care, since Atari owners are a bunch of outspoken people who stuff mailboxes and don't allow a 'true' count of peo-ple's opinions...

RG> However, a little persuasion from a lot of users and others
RG> should get them to bring it back.

Don't bother. Computer Shopper took a bad turn when they sold out to a large magazine publishing company. It's nice to pick up a copy once or twice a year just to keep up on trends & ads, but the editorial slant of the magazine has left me cold.

1547. CoSTa 1.42 now available

Newsgroup: comp.sys.atari.st
Date: 1996-07-30 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <30671566_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 140976
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of CoSTa (1.42) is now available on ftp.cnam.fr in
pub/Atari/incoming/
The file is called costa142.zip

CoSTa logs calls made by NOS, CixComm, MiNTnet, CoNnect2, and ICE. It then
calculates the cost of each call and presents you with a running total of
your current internet phone bill usage.

This version has better support for STiKtime (by Guy Harrison). When used in
conjunction with STiKtime it is now possible for CoSTa to handle calls made
via STiK. Now you can see how much money you're spending on the web!

Gary.

Hi UK readers, I'm trying to get rid of a bunch of Atari mags (STF
1990-95, ST User 90-94, ST Review 92-94)
Not every issue is there, in total there must be approx 80 mags, and a
load of cover disks as well. I also have a MicroDeal VideoMaster, a
Cameron HandyScanner (mono hand scanner, boxed as new) and a Jaguar Joypad
(works on Falcon)
Falcon users - I have 4T-FX hard disk recording package, boxed, dongle etc.
No reasonable offer refused, email me if interested.
Bye for now,

Rich

We PC/Mac users have access to both quality and quantity. The latter is alien to you, right?

If it wasn't for those platforms, you would not have access to cheap HD's and memory.

1551. Atari TT For Sale

Newsgroup: comp.sys.atari.st
Date: 1996-07-30 00:00:00 UTC
From: troyc@valens.arris-i.com
Message-ID: <4tjs85$p0v@batph8.bnr.ca>
Source record: 141018

I have an Atari TT030 for Sale:
Motorolla 32MHz 68030 + coprocessor
8 Megs Ram Total (4/4)
720 Meg Quantum Harddrive
1.44 Meg Floppy
TOS 3.06
External DD drive
Great TT style Keyboard

Hard drive has both Atari software plus a full Linux Installation
(Linux ELF + X windows)

ST Users take note: This machine requires a VGA monitor.

$600 Firm, shipping included.

Misc for sale, prices DO NOT include shipping. Make offers, everything
must go because I don't want to lug it when I move:
Tandy 102 Laptop Computer $100
I actually saw a foreign journalist for the Olympics using
one of these on the News the other night! Includes power
cable, carrying case, modem cable, all manuals.
Atari SC1224 Monitor $50
Spectre GCR + disks $75 ($50 with purchase of TT)
PC Ditto II (hardware + disks) $30
Everex 2400 Baud Modem $15
Avatex 1200 Baud Modem $10
NEC Multisync II VGA Monitor $40
NOTE This monitor has sync problems when cold. That's why
it is so cheap. If you can fix monitors, then this is for you.
Very crisp picture when in sync. You have been warned.
Caveat Emptor. ***NOTE***

Hi fellow Atarians,

Following a suggestion, I posted a complaint about Peter Sinclair-Day.
This is the response I received... very interesting hmmm... ?

>> Subj: Peter Sinclair-Day. Net Abuse.
>>
>> System Administrator University of Northern Iowa.
>>
>> Dear sir,
>>
>> I would like to draw your attention to the following news item. It
>> regards an exchange between Denesh Bahbuta, former administrator of
>> the FTP site at HENSA, and Peter Sinclair-Day an employee at the
>> University of Iowa.
>
>Peter Sinclair-Day is *NOT* an employee at the University of *Northern*
>Iowa. He is a student here.
>
>- Ken

Apart from the fact that `Ken' apparently chose to ignore the main
thrust of the original mail, it's interesting to note that sinclap is
just a student. Nothing against students, I was one myself once, but it
does put a different slant on things when you realise you're not dealing
with a mature adult. (Please no jokes about cheese!)

Well I've done my bit for the `grand scheme'. I can only add that, `kill
files or no', if you ignore sinclap and don't respond to his prescence
he'll start to feel pretty stupid. In fact, that if he knows you don't
use a kill-file but still ignore him, you'll reinforce the message.
`Sending to Coventry' is a very effective method of dealing with social
pariahs.

Let's get back to the main business of the newsgroup!

Thanks for reading,

Ali.

> Playboy?

An observation. I prefer the format to some of the U.S. mac mags. MacFormat has screen shots of apps when they do a review, preview or a story on it. I admitt much of the Mac rags are flat, but hopefuly Mac Addict will change thinks. There is also many on line web rags that are pretty good. As for Playboy, its the articles such as the Jimmy Carter one way back when...)

> True, the other mag Atari Review/World however was much better but

The old Atari Explorer before the Trammy family fired the staff was decent. As usual a good publication went down the toilets.

If you say so. But there are no Mac equivalents in the ST platform to compare with. I am sure that the ST OS called TOS is smaller than the Mac OS. But the mac os has more functionality witch translates into 'does more, costs less'. From what I have seen of tos is a cheap knock off of the Mac OS below system 7. There are no equivalents to opendoc, quicktime vr, powertalk, open transport, publish & subscribe,

> You are doing your cause no good whatsoever, I don't think that you

Sounds like sour grapes. 'We ST'ers only have 8 mhz and anything more is a waste'. If the rest of the world adopted the St strategy, we still would be playing Time Bandits. I believe you state this because the ST line will never catch up and has made you arrogant of the Intel inside industry.

If you want to spend $3000 on 040 hardware that is your business. We in the mac/pentium markets pay much less for power. PowerComputing on Aug.5 at MacWorld will bring out to the market a Mac OS box utilizing the PPC 603e running 240 mhz for $2200! $1500 for the 180 mhz and $1800 for the 200 mhz one. Yes Virginia, the boxes will include 16 megs ram, 3 PCI slots, 8x CD-ROM, 1.2 gig HD.

> Finally could you just explain to me why you have to continually dig

> very sad and lonely person? I really would like to know.

The ST is considered compact because it hasn't advanced to a new level. There is still no equivalent of open doc, cybordog, quicktime vr, powertalk, open transport, quickdraw and much more. Nice thing is that the other platforms have it both ways such as high quality PD and awesome 90's apps.

I agree that the ST is fine for email just don't try using Netscape.

> -scott tirrell
> -stirre31@maine.maine.edu

Scott,

The connector in Falcon is called a 1/8" mini-jack or a telejack. In
metric system it's called 3.5mm.
I don't know about the Plaintalk microphone, but some newer
microphones included with Macintoshes have a longer jack, but still
1/8" in diameter. This makes it impossible to insert fully, and you
will not hear both channels, or possible none at all. What I know of
it is only Apple that uses this longer jack, and other microphones
should do fine, if you can't find an adaptor for it.

Hope it helps,

Tomas

I don't think these programs recommend AHDI as driver but only an AHDI
compatible driver. HDDRIVER is fully AHDI compatible, according to the
AHDI specifications (AHDI 3.00 release notes, these are the latest
ones.) So any software should work with such a driver. If it doesn't,
this software has a bug because it relies on non-documented features.

Concerning SCSI and CAF this is a hardware problem. I made some tests with CAF in order to find how it happens that with CAF the Falcon SCSI bus sometimes blocks when there is heavy hard disk activity. After identifying the problem I wrote a small program CAF_FIX that will configure HDDRIVER (not any other driver!) in a way that circumvents this bug. CAF_FIX comes with the current versions of HDDRIVER. (I guess the first one coming with CAF_FIX was HDDRIVER 5.0.)

s > You wish I am in conflict with the charter. Richy you're kill
s > file must not been working to well.

actually, he decided to drop the kill file for awhile after I
informed him about the things you were saying behind his back
regarding the e-mail flaming incident, and figured he had a right to
know and reply to your twisted account of what happened.

And yes, you ARE in conflict with the charter. Grow up.

s > Richy is going to cry baby to the postmaster again.

We all know who the baby really is in this. And remember,
Sinclap, that whiny little brats eventually get spanked when they've
gone too far.

s > Why not use another kill file if you are so annoyed? That way
s > you do not have to bare a lecture on the first amendment, it's
s > virtue and important section of the constitution. You are a
s > constitutionalist or still a loyalist to the ex mother country?

Ah, I knew that you were going to try that old chestnut again -
"I have free speech, I'm protected by the First Amendment, so too
bad!"

Well, guess what, Petey boy - I've dug up an interesting
document from the Electronic Frontier Foundation, a Supreme Court
decision on the infamous George Carlin broadcast, the FCC vs.
Pacifica case. And in their decision, the court found that the First
Amendment does not cover those who act as a public nuisance in a
broadcast forum (which the Usenet may be described as). As a matter

of fact, it turns out that Rich may actually have more rights in being protected from your spewings than you do in expressing yourself in your combative manner.

Since you have continually refused to modify your behavior to follow the rules of the charter under which comp.sys.atari.st operates as requested, it thereby makes you a public nuisance - and thereby are NOT covered under the First Amendment regarding freedom of speech.

And before you say "it means nothing!", I'd like to inform you that this Supreme Court decision has already been used to remove another public nuisance from the Usenet; it recently happened in alt.tv.simpsons, where net.flamer Chris Rozier was forced to leave the forum alone for making a variety of insulting posts that consisted of combative and abusive language questioning the intelligence of fans of the television show "The Simpsons" over the last few years. One person in the forum made a complaint to his server and used the court decision to show that, as a public nuisance and troll, Rozier was not protected under the First Amendment. The result was Rozier being read the riot act by his server, and has not posted to alt.tv.simpsons since.

Regarding your "patriotic" stance for jusitifying your behaviour, you now join the ranks of others who have tried the same: Richard Nixon, Wally George, George Bush, Oliver North, Senator Joe McCarthy, the John Birch Society, Dan Quayle, and Rush Limbaugh. And we all know how credible they (and you) became after trying to wrap themselves in the flag while walking through the mud.

Remember the words of Samuel Johnson, who correctly noted that "patriotism is the last refuge of a scoundrel".

BTW, to check out the decision yourself, I'd suggest pointing your net server to http://www.eff.org/pub/Legal/Cases/FCC_v_Pacifica/fcc_v_pacifica.decision ; or if you can't find it that way, go to http://www.eff.org and use their search function to find "Pacifica", which will pull up the proper path to the document. Either way, you'll find out just how vulnerable you are to having your net access pulled for your behaviour if you don't straighten up - and you can't hide behind the Constitution.

s > GREETINGS..

bub-bye.....

There are no specific NVDI drivers for the NOVA graphics boards. But NVDI from version 3.02 are compatible with the NOVA drivers. To install NVDI 3.??/4.?? with the NOVA cards, you first have to install the NOVA driver and have the screen running with the graphic card. Then you install NVDI, when NVDI installs it disable the NVDI screen drivers.

From: chriswil@southern.co.nz
Message-ID: <4tkgr9$rcg@orm.southern.co.nz>
Source record: 141028

Hi there...

Subject says it all. Can the icons supplied with MagiC 4 be edited? IC DRAW barfs when I load the MAGICICN.RSC file, and I want to replace some of the icons with my own creations from the DESKICON.RSC file...

Chris W.
/|\

PS. I don't want to buy EASE to accomplish this, so please do not suggest this...

I think you can get around this GEM-View problem by simply exporting the image in a truecolour format (e.g. truecolour TIFF) then importing it again and choosing System palette in the colour dithering options. This may only apply to GEM-View 3.06, however.

Another way is to use a desktop that supports images on the desktop, e.g. Gemini, or Thing (although Thing seems to get the colours muddled also, but Gemini is fine). You may also be able to get some other replacement desktop and just use a resource editor to change the background to one big CICON.

To extract .tgz files you need gzip.ttp and tar.ttp. AFAIK there are four differents version of gzip. Two (TT and other) for the normal tos and two for minixfs.
I can't remember me where I've found these packutils. They can probably be found on every Atari site. For gzip looks after gzip124b or newer.

To extract you simply activate first the gzip.ttp. As parameter fill in -d name_of_the_file.tgz (assuming that the gzip.ttp is located on the same directory of the file).
This action will extract the file to *.tar
Now activate the tar.ttp and fill in -x name_of_the_file.tar

That's all

: Will Straight fax work on a Mega 2 with TOS 1.02?

Should do. I use it on a 2Mb STFM with TOS 1.02. I think a Mega only has the extra blitter so I'm pretty sure the setup would be the same. In fact, it's better than any other model since TOS 1.02 doesn't need any patches for flow control.

See ya

Hi Martin,

It sounds like your pretty close to me. If your Supra 40 has a SCSI pass through, all you should need is a SCSI cable to take care of the hardware side. On the software side, you will need a driver that can handle removable hard disk media. I use ICD Pro, but there are others available.

good luck,

aj

Out of the ether, the following was mentioned by spiper@wow.com...:

s> cartridge at anywhere from $100 (CompUSA after $30 rebate) to $120
s> (just about everywhere else), so they are quite a bit less than the
s> Zip drive, which has a $50 rebate, by the way, until some time next
Unfortunately the pricing this side of the pond isn't so great.

s> If you need the speed, then the Syquest would be better. If you don't,
s> then the Zip probably would be best. You could also go optical or
s> even get a JTS drive. They are supposed to be pretty hot and will be
s> installed in Compaq's new line of notebooks.
The Syquest is looking more and more the one to get (for me) but I will wait
until the SyJet has been around a short while.

I've seen Compaq's new floppy drive and admit its pretty good (though not
that fast!) as we have taken delivery of our first machine with one fitted at
work. One problem however is that it isn't SCSI (not sure what it is
exactly???) so fitting to the TT could be painful. I've also heard that there
aren't any plans currently to make them available other than prefitted to
Compaq machines.

As publisher, I want the magazine to reflect the tastes and interests of
ALL Atari-users. There will be an extensive review section, and all
program submissions will be carefully considered.

It won't be a 'serious programs only' mag, in fact it will have a liberal
dash of humour running through it. We're not boring 'my Mac/IBM is bigger
than yours' wallies!

More news soon!

Don't do it!
<pre> is great for some things, but here we DON'T CARE about the
original layout, we care about the information itself. If you try to
do multiple columns, it will just make it harder to read -- and
convert to other forms.

> pages of info get large fast.

We're using OCR to make text versions of the pages. Covers and necessary images are being scanned as JPEGs.

We won't be doing graphical scans of all the pages: its a TREMENDOUS waste of disk space (5K for the text of an average article, vs. about 1MB for the "actual digitized pages.") Its the INFORMATION that is important and useful, not the layout. And the information is much more useful and searchable as HTML.

Source record: 141048

Press release 29th July 1996
==========
Mike Kerslake, a magazine publisher with over fifteen years experience has signed up Frank Charlton, ex features editor for ST Format and Joe Connor, ex Reader Disk/Public Arena editor for Atari World as joint editors for a NEW printed Atari magazine called Atari Computing.

The launch issue of Atari Computing will feature sixty A4 pages crammed with quality editorial. We're delighted to welcome contributions from respected and well known journalists including Graeme Rutt, Jon Ellis, Denesh Bhabuta and Kev Beardsworth.

We're delighted to announce we've signed a deal with the two leading disk based magazines, AtariPhile and Maggie to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out what you've been missing!

The launch issue will be on sale at the forthcoming Atari shows so why not attend and meet us? The shows will be held on Saturday September 28th in Birmingham and Sunday September 29th in London, for more details about the shows contact: Goodman International, Telephone: +44 (0)1782 335650.

Issue one preview

Issue one is still in the planning stage but here's just some of the articles we're working on:

- News and gossip put together by Graeme Rutt and Frank Charlton including details about the Atari Computing website.
- Software reviews including HD-Driver by Jon Ellis
- Hardware reviews including Nemesis DIY by Simon Coward
- PD/Shareware reviews of MagiC utilities including Start Me Up! and Stewart
- Preview of MagiC v5 by Thomas Binder, Kandinsky v2.5 by Kev Beardsworth and Stella by Joe Connor
- Music and MIDI primer
- User group reports co-ordinated by Al Goold including feature on Spanish Atarians by Andrew Harvey
- Atari Jaguar coverage

Remember these are a sample, not a complete list!

Background

Following the closure of Atari World earlier this year it has just been announced ST Format, the final UK newstand publication, has also closed.

It's the end of an era in the UK which for the first time since 1987 has no Atari newstand presence.

The men in grey suits are telling us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the new millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We intend to offer one Reader Disk to accompany each issue, buy it or not, the choice is yours!

What we need, now more than ever before, is your support. It's going to be tough to keep going so we're initially planning bi-monthly releases -but this could change, it's really up to you! Instead of wishing us luck post a cheque to reserve your copy today!

Ordering
==========
As we're sure you'll appreciate launching a new magazine is a risky business requiring pinpoint budget management. Our print run will be conservative and we don't expect to have a stock of back issues.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today!

>>> Fast feedback request -->>>
If you're on-line we'd like to hear from you right now! We're keen to get an idea of demand for the mag. To reserve copies send an empty email with the title line: KEEP and if you'd like two copies simply add the number afterwards: KEEP 2 etc, thanks for taking part!
Email: atari_w_admin@cix.compulink.co.uk

Subscriptions

Many of you (and most of us) lost money following the Atari World debacle

and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs. If you order an evaluation copy we won't cash your payment until we've printed the magazine, simple eh?

United Kingdom

Send cheque/PO made payable to the 'Atari Computing Group' to:

Mike Kerslake
42 Larch Hill
Handsworth
Sheffield
S9 4AJ
Telephone/Fax: +44 (0)114 2618940 - 10am to 6pm, Monday to Saturday
Email: mkerslake@cix.compulink.co.uk

Initially we're offering a single evaluation copy or three issue subscriptions at the following rates inclusive of post and packing:

| Evaluation Copy | UK | EUROPE | USA
|---|
| Magazine only | £ 3.00 | £ 3.50 | £ 4.00 |
| With Reader Disk | £ 5.00 | £ 5.50 | £ 6.00 |

| Subscription | UK | EUROPE | USA
|---|---|---|
| Magazine only | £ 9.00 | £11.50 | £12.00 |
| With Reader Disk | £15.00 | £17.50 | £18.00 |

Payments for European and USA subscriptions must be made in a form acceptable to us, such as cheques drawn on a UK bank or UK cash in a registered letter. We will be looking at other ways of payment to make things easier in the future. If you want to order a magazine and none of the above rates apply to you, just email us and we will give you a price.

Atari Computing will also be available directly from authorised User groups and other outlets around the world:

Germany

Thorsten Butschke
Email: Thorsten_Butschke@s.maus.de (No emails >16K please)

Other

We're expecting to be able to announce local support for Scandanavia, Australasia and North America RSN!...

Advertisers

We have a limited number of pages set aside each issue. These are

realistically priced to attract everyone in the Atari marketplace. To discuss your requirements please contact Mike Kerslake at the address above.

Submissions

We're always on the lookout for talented new contributors so if you've got an idea for an article please do get in touch.

Who are we?

Atari Computing is financed by the Atari Computing Group, based on CIX, and dedicated to supporting the Atari platform. Membership of the group is by invitation only. We're looking forward to Issue 1 as much as you are!

Regards

The Atari Computing Group (ACG)

Considering that Ralph Mariano is accused of committing mail fraud by a fair
would-be purchasers both in the USA and Europe, I'm surprised that even /you/
would want to have your name associated with his. It's not inappropriate,
just surprising.

1585. ShareWare Hassles B-(

Newsgroup: comp.sys.atari.st
Date: 1996-07-30 00:00:00 UTC
From: dooley@berlin.infomatch.com
Message-ID: <4tm91g$9tv@berlin.infomatch.com>
Source record: 141052

Ok, I gotta bone to pick NewSTar Technology Management!!!!

I'd hate to say this but it's happened so many times to me! :-/
and it's really starting to piss me off in a big way!

If Programmers/distibutors do not support the wares they write/sell after
you have sent in your registration fee.. and bitch about people
pirating the s/w.. I just don't get it!!
Expecially in the Atari World.. where there is not anyone really left
writing for the Atari ST/STe (commercially that is) It is not too far off
where everyone that has ever written s/w for the Atari is and will soon
be outta business and then everyone will distribute the s/w as WareZ as
there will not be anyone around to even care anymore..! This is the
reason people Start pirating s/w.. They spend there hard earned money to
register a peice of s/w and it also includes Full Support with problems
and they even supply e-mail addresses and Phone numbers to get the
support that you need! And when you try to get that support that comes
with the s/w there are never there to help you!
Then I feel that I did not get 100% of what I paid for..!
I've had a few run-ins now with this kinda problem.. the latest being
STraight FAX.. I have a registerd version of it and have sent tons of
mail to the addresses in the Manual and have never even got a reply!!!
Not even a "We got your mail but we can't help you with your problem"
:-/
:-/
As of this day forward.. I will never register another peice of ShareWare
again... And I really hate to say that.. As I know there are otheres out
there that will help you 100%, but I don't wanna take that chance
anymore and try to pick the ones that will give you some support!
I figured with STraight FAX that is distributed by TOAD Computers - which
is a reputable company.. I figured I could not go wrong..! Guess WHAT!

Does anyone Use anything close to this SETUP that might be able to help
me with my PROBLEM?

1040 STe, 4 meg, TOS 1.06 and 2.06
STraight FAX 2.0, 2.2
USR Robotics SportSTer Vi 14.4 (Voice/FAX)

What happens is that I can send no problems.. but when trying to
receive...

1. I can only receive one page, as after the first page it Times out and
hangs up Before I receive the "Page acknoledgement"

2. Then When I view the first page.. it looks normal for the first half of the page and the bottom half of the page is all garbled and scrambled.

I have tried everything and have had no luck!

Please if you can help or point me in the right direction or know of any telnet sites where there is some STraight FAX discussion or there is a local BBs that you call and has a message base with STraight FAX in it.. I would appreaciate anything!!

Thanks!

That part hasn't yet been tackled. The first step that The Underground is worried about is actually learning the finer points of the Jag so they can begin programming some great titles, and as far as that goes... just wait until you find out what's in store...

more later :)

I can't agree with you on the shareware registration, but have been "bit"
a few times myself!
On the Straight Fax problem, you might want to check with Toad on
the 2.5 upgrade, and also make sure that you have some sort of serial
port fix in place with rts/cts turned on!

Hello Raymond

To print with Calamus you need a driver for your printer. BTW: which
printer are you using? e.g. If you use a HP 500C printer you need the
hp_d550c.cdt to print your document
The IMG.CDT /does not/ print at all. It converts only a Calamus doc.
to an IMG file.
Hope this will help you
Martin

You have everything that you need to hook up the Syquest EZ135. If I remember rightly it even comes with a 50 pin to 50 pin scsi cable. So all you shouold have to do is decide what scsi device number you want it to be, and use the point of a ball point pin to set the number on the back of the ez135 to that, then partition it and your in business! I love mine! Makes backups a dream.

I just got one of the bargain $120 EZ's, and must say I'm pleased with it... all the "hassles" are blown out of proportion IMHO. Spin ups, downs, ejects, are all very tolerable to all but the most impatient. My EZ takes less time than my hard drives to spin up/down. The extra speed over a Zip (now i have to compare the preformance on a mac, as I've not been able to get a Zip to run on my STe) outways these "time consuming" events.

From an atari perspective I think the EZ is much better, as long as you plan on buying a few carts in the next few months... I mean, Atari users worrying about impending obsolescene is a little ridicolous when yer think about it. ;)

> dropping an EZ cart is like dropping a hard disk, dropping a Zip is
> like dropping a floppy.

Nah.. that's a little exagerated, unless they are building high impact HDs these days. The zip carts are lighter, if thats what you mean and thus a bit more resilient, but EZ carts ain't no ming vase.

> Go with our guts, they are both great machines but also are very
> different, see which one suits you then go for it.

Exactly, both of the items are far better than our previous choices in this arena. And both of them are gonna be obsolete as quick as you can say Tony Bastable... If either are discounted in your buying area, then you haven't got THAT MUCH to loose...

Yesterday I recieved an interesting merger form from JTS Corperation. Apparently they are buying Atari Corperation or more likely taking it over for its assets. JTS makes hard drives for third world computer companies and have a manufacturing facility in India. Atari has ceased production of the Jaguar and reduced staff to 22 persons last February. The merger probably is a done deal by now. Shareholders of Atari will get one share of JTS for every share of Atari adding 64 million shares to the 28 million JTS has. Anyone heard anything else?

SUBJ: Latest AHDI/HINSTALL/SHDRIVER.RAW?

j> Any information or recommendations would be appreciated. I am
j> currently able to use ICD Pro or HDDriver, but several programs that I
j> use recommend Atari's drivers, so I would like to try those out.

If you are able to use HD-Driver then forget the rest and stick with this. I personaly think that when it says in dox that it want the atari driver that it means really one that supports the AHDI standard, as does latest ICD and HD-Driver.

Otherwise the most recent and partition overlap bug fixed AHDI is 6.061.

j> Also, I am assuming that HINSTALL uses SHDRIVER.RAW to create
j> the boot drivers when it is executed, is this correct?

SHDRIVER.RAW is the driver, and is copied and named accordingly to *.SYS or *.PRG.

Source record: 140873

You know what fellow Atari users(ST and emulators)...this thread has really bugged the living crap out of me. Our friend Tony Greenwood has first announced the closing of ST Format which was later conformed officially by Frank Carliton. Sadly, this is no Internet spawned rumor...

I don't need to tell you how wonderful this magazine has been to the Atari community and how sad it is, but this isn't bothering me. One single person whose e-mail name sounds like an evil social disease has yet again decided to run his mouth without even considering of passing it through a brain should he have one. Imagine at someone's funeral, some wise guy stands up and says "Glad he's dead and **** you all!" 99% of you know exactly whom I'm talking about, the 1% won't admit he posts that crap of his.

And now as for Peter Sinclair-Day a.k.a Mr. Sinclap...I no longer respond or even read any of his garbage because he refuses to be reminded of his ignorances and his pro-Mac stances has become personal attacks on people which is not even funny. I will not participate in any more of this flaming because it doesn't do anyone good, and this is the last time I'll mention any of this(nope, not even a little joke from me).

I suppose he wouldn't like it if a Windows user would keep repeatingly insult the precious Mac platform of his. My beef, this STF dead thread has degraded to this. So I'm dropping this thread right here and now though others will continue on it especially commenting on my rebuttal, be my guest...

A wierd side-note: the other day while I was driving along Mathilda Avenue in Sunnyvale, California, I noticed a brand new sign on the street -- none other than the familiar Atari logo. For what it's worth, the new Atari "World Headquarters" is a small office in a strip mall. The address is 455 South Mathilda Avenue, Sunnyvale, CA 94086. Atari, once an innovative giant which was reputed to have helped start Silicon Valley, is now just a shell of its old glory.

1608. Wanted: Old Atari STs

Newsgroup: comp.sys.atari.st
Date: 1996-07-31 00:00:00 UTC
From: jabeecher@aol.com
Message-ID: <4tp9ba$kbn@newsbf02.news.aol.com>
Source record: 140875

Still looking for old equipment, though with the current response we should have all we need soon.

To repeat:

Wanted: Atari ST series Computers and Monitors.

Introduced in 1985, the Atari ST series was Atari s answer to Apple s Macintosh. They used Motorola 68000 chips and had a graphic desktop user interface. They couldn t compete with giants like Apple and IBM in the long run however, and eventually became defunct. Modern Atari computers based on their basic design are still on the market today.

Although its 8mhz clock speed and standard 512k might seem outdated by today s computing standards, the Atari ST had at least two very redeeming features. One: standard onboard MIDI ports which are still very fast compared to today s computers. Two: The first really good multi-player interactive game.

MIDImaze was developed in 1987 to take advantage of the ST s fast graphics and MIDI. One hooks up to 16 machines in a daisy-chain MIDI ring and fires them up. Then all the players run around a first-person-perspective maze and shoot each other in real time. It s a little like Doom Deathmatch with more players and less gore, and it remains popular today.

We run MIDImaze for no charge at Con of the North, our local games convention. We plan to take it on the road at some time in the future. To do so we will need more Atari STs.

Absolutely any Atari ST or the later TT or Falcon will work for the game, so we are interested in any and all of them. We would prefer models with RF modulators because they are easier to modify for use with composite color screens, but if your computer does not have one and you have an Atari monitor for it we ll probably want it anyway. Old style 520s with no disk drive and 512k are just fine!

We are willing to pay $30-50 per computer or monitor, and we are also willing to pay shipping. If you live in the Twin Cities Area, we will even come and pick things up. Bonus!!! If you live in the 5 state area (Minnesota, Iowa, Wisconsin, the Dakotas) and donate an ST or two to the cause, we will come to your local games convention and run MIDImaze there!

PLEASE MAIL ALL INQUIRES AND RESPONSES DIRECTLY TO: jabeecher@aol.com.

If you are reading this and have any suggestions where we might post this to better effect, please do not hesitate to tell us.

Thank You for your time!

d> Not even a "We got your mail but we can't help you with your problem"

I clipped out the part where you said you will never register shareware again, and that you bought the software from Toad. I have to ask: What does buying commercial software from Toad have to do with registering shareware? Your statement appears to be the equivalent of saying, "I got food poisoning at McDonald's, so I'll never eat my next-door-neighbor's barbeque again."

Try sending the mail certified, return receipt requested. That way, you can at least find out if it's actually getting delivered.

Actually, the report I read was that Atari (aka Jack Tramiel) had bought a controlling interest is JTS. The choice to switch the company name is an obvious one, as "Atari" has a world-wide reputation (deserved or not) for making "game machines." Since TOS has been licensed to thrid-party computer makers, we no longer have to contend with the "here's what we'll give you next year...Oh, wait, never mind!" policies that the Tramiels brought to us. I have a soft spot for that blue Fuji, and I'll kinda miss the company (even if it was a love/hate relationship) but the heart of Atari beats on, even if the name has passed on into history.

Thanks for your reply, however, I have found through someone else's reply
that CYBERCUBE is the one that is marketing (was!) it here in North
America.

As I have played around with the demos recently, I can see where you say
it is more of a raytrace/render/animation station, yet I point out it has
a powerful 3d engine for creating 3D templates and changing perspective
views. I am hoping to find out that it is more capable than Tom Hudson's
CAD 3D version 2. It can import the objects (3D2) which means a real
timesaver to me.

In article <838641490.12849.1@sf_pc.itl.co.uk>, sf@itl.co.uk says...

By typing

tar xvzf file.tgz

in MiNT.

In GEM I have to:

select gzip.ttp,
enter "-d file.tgz"

resulting in a file file.tar or just file.

Then I have to:

select tar.ttp
enter "xvf file.tar"

That's it.

Franz

: They got rid of all computer coverage other than pc-clone & token
: Mac coverage several years ago. They got rid of the classified
: section, oh, a bit over a year ago.

Hmm... Didn't know this. I never heard a thing about it, even though I read through the whole thing and read most of the editorials from most of their columnists. The absence of the classifieds was noticeable, though I don't recall when I noticed it...

: They stated once that they got a lot of mail from Atari owners when
: they dropped the 'orphan' computer sections years ago, but they
: didn't care, since Atari owners are a bunch of outspoken people who
: stuff mailboxes and don't allow a 'true' count of peo-ple's
: opinions...

Not necessarily true. There's a lot of them out, but sometimes it's the few bad apples that give us bad vibes. That's what you get when some companies don't seem to understand the Customer Service concept. They listen only to themselves and their own opinions.

: _Don't_ bother. Computer Shopper took a bad turn when they sold out
: to a large magazine publishing company. It's nice to pick up a copy
: once or twice a year just to keep up on trends & ads, but the
: editorial slant of the magazine has left me cold.

Now when did *THIS* happen, their changing hands? I never noticed a thing, except for maybe the price going up a little, going from about $3.50 to the present $4.95 it is now. I usually refer to it for price quotes and that sort of thing, for my IBM side. Yes, I built a 486 for my own use, and even have an STE and Mega ST4. Don't ask why...

GameWire Web News Update -- 7/30/96
Visit us at: http://www.gamepen.com/gamewire/

This past week, we have added lots of great things to the GameWire Web site. We'd like to point out that our Webmaster was gone last week, but we still updated the page each day; unlike some other Web sites, you can count on GameWire to provide you with regular updates no matter what. Below is a listing of what's appeared on the GW Web site over the past week; we think that you'll be impressed!

-Reviews of Fade to Black (PSX), Baku Baku Animal (SAT), NHL Powerplay '96 (PSX/SAT), Fantasy General (PC), Wing Commander IV (Mac), and others.

-The new GameWire RPG network; a page totally dedicated to role playing games. Downloads, reviews, links, and more!

-The debut of our new Web affiliates, "The Apex of Ultimate Light" (http://www.gamepen.com/gamewire/Apex/Apex.html). This page covers relaxing and interesting light synths; we think that it's a "groovy" addition to our site.

-New games to download have appeared in our downloads area.

-Take a look at the new July issue of GameWire; we've got an exclusive preview of the Nintendo 64! More formats now available.

-And more! Load up our homepage today.

Thank you,
GameWire Web Department
http://www.gamepen.com/gamewire/

Devin G. Phatak

GameWire Co-President, Senior Editor, and Director of Sales, Advertising & Marketing.

E-Mail: DevinP@netgate.net, GameWireSE@aol.com, DevinP@aol.com.

Are you into Macs? If so, check out the MacNetwork at:
http://www.gamepen.com/gamewire/gwmacnetwork/

For a subscription, e-mail me, with subscribe in the subject box.

ungzip <filename>
tar -xvf <filename>

It is two stages, first to uncrompress then to unarchive. If you do not have
access to a Unix system then you will have to get GNU tar and zip for your
ST, they are available from a.a.u.e.

>Now this is a bit odd. You get the dialog come up saying about keyware but
>the docs don't mention it. They don't ask for any registration at all.
The keyware message is not for you. It's because the author
hadn't yet plugged in his registration for the software he wrote
it with.
>I still think it has the potential to be a great ftp program if it's
>developed further. So how about it??
The latest Public release IS 1.03!!!!
A version 1.04 was beta tested by myself and some others, and it was
MUCH better than 1.03. However it still had serious bugs, and M. Guse
decided to rewrite it Totally before re-release. Version 1.05 SHOULD be
great, if ever!.
The 1.04 was from April, and tho I have corresponded several
times with the author, in the last month or so, I haven't heard a word!!!
Maybe he is on vacation????

>Special compiled MiNT v1.12 for MC68030 and so on...
>

Totally agree with you. So far it's the only multitasking system that
really works on my TT (haven't tried MagiC yet).
There are a few problems though (at least on my computer). For the
moment I'm unable to print. Calamus sends the data to the printer but
that's all. The printer doesn't print. Trying to print some text with
Idealist give me a screen full of bullshit (to me) and no prints.
I'm using N.AES together with a special Thing version, mintnet and
minixfs.
Anyone an idea of what I'm doing wrong?

Thanks
Martin

1634. Need help compiling a program (C code)

Newsgroup: comp.sys.atari.st
Date: 1996-07-31 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <31fec6dc3a65316@sn.no>
Source record: 140901

Would someone here like to help me compile a program for the ST?
I have no idea about programming, compiling or anything so that's why I'm posting this.

The programmer has made the program available for another system (not sure which- I can check), but he said it should compile for an ST or any other system as well.
I've got the source code (in C)- it's about 27 Kbytes long.

Oh, just in case you wondered- it's a program which converts sample files from one format to another, namely "Typhoon" format into "Yamaha" format samples for the Yamaha TX16W digital sampler unit.

PS. A nice, user friendly GEM interface would be nice :-)

1636. MagiC 4 and the DSP

Newsgroup: comp.sys.atari.st
Date: 1996-07-31 00:00:00 UTC
From: jtb@jazzmin.vnet.net
Message-ID: <4tmndi$1as@ralph.vnet.net>
Source record: 140977

Just wondering if anyone else has had this problem, but I run MagiC 4 on my Falcon and if I use the DSP to decode a JPEG with the Brainstorm JPEG viewer (any version), it will lock up unless it is run as soon as the system is booted. (I know, this is weird).. then once it is run, it can be run fine. However, if I boot, run another program, then try to view a JPEG, the system locks..

I'm not running anything weird.. just MagiC 4 and NVDI 3.. I've also had this happen with other DSP related programs (some AVI viewer and JPEG-DSP)

s> I would have to say that they know not whereof they speak, then.
s> HSmodem is a replacement for the serial routines in TOS.

Flow control is not the only bug in TOS 2.05. This TOS requires SERPTCH2 as
well as HSModem.

I can't locate my manual at the moment, but you should note that the Atari MSTe manual is demonstrably wrong. On my Modem 2 port (directly under the power cord - not the one on the VME port plate - just in case of any confusion) CD, DSR and RI are fully connected.

The correct pin connections, as confirmed with Mark Baines (author of Profile 2 and the Atari A-Z among others) and Andr&#65533; Willey (author of CixComm) is as stated in Mark's book:

Pin 1: DCD
2: RxD
3: TxD
4: DTR
5: GND
6: DSR
7: RTS
8: CTS
9: RI <-- not connected on Serial 2 (on the VME backplate)

Re: SinClap

Why don't we just all ignore this prat, who's obviously got such a small willy that he has to boast about his Big Mac!!!

Sending him to Coventry is probably the best thing to do with him. Other than that, I could hire some geezers to go round and make him shut up. I'll be wanting a few quid/dollars off you all though to pay these guys, they're expensive, but the solution is permanent :-) I understand it involves the pulling of various things from their sockets and the use of a sharp blade!

Bye bye SinClap

N.AES is a commercial product developed by Overscan from Germany.
If you are located in Europe you may have better luck, but I sent
them a couple of e-mail messages asking about North American
distributors, or failing that, how I could purchase the product
directly from them. I never got an answer >:-(. Now would be the time
to act, because according to their homepage they are running a
special.

: supports .FLI?)
:
: Leslie

Hi Leslie,

Greetings - I am the support co-ordinator for M_player. Some formats of AVI
and MOV are not yet supported, and the file will only play sound (if sound is
present - it isn't always) on thse formats. The shareware version is in mono
but the registered version is in full beautiful colour. I registered mine last
week and have been very happy with it.

Guillaume will (I think) be working on the new formats (notably iv32 and iv41)
soon, so please consider supporting him by registering the product.

BTW (again) most of the M_PLAYER stuff above is in the English Doc I think,
have a look and let me know if it isn't.

Regards,

You mean no one answer any of his postings, no one speak to him, not even if he gets up your nose?, I think thats an excellent idea, no matter what subject he jumps in or tries to comment on, if we all simply ignore him, he WILL go away,

I think it would be a fine idea to draft a small polite message, to be given to anyone who does reply to him, this would be a gentle message stating that we are trying to rid this group of him and could you refrain from replying, we cannot obviously tell peeps who to post or not post to, but I feel any ATARIan asked will comply,

Just ignore him and he will go away,

Cheers.............!ynoT

<pre> wouldn't look as good with graphical browsers. If you want multiple columns, use tables. But then it wouldn't look very good with lynx. So just don't bother with keeping the original format.

Hi

I am using an EZ135 with a Link2, and a Quantum 85Mb drive.

Here's the chain:

STFM (TOS 1.04) > LINK2 > EZ135 > QUANTUM > SCSI EXTERNAL TERMINATOR

It all works very well, I used ICD HD Utilities to format the EZ, then popped HD Driver in to look after the partitioning (AHDI comp.) and driving. Don't forget to set HD Driver to use the Link2 and set up the removeable media option.

OK, that's exactly 2 explicit replies. I am currently working with another
person to get the proposal properly assembled; it will be announced in all of
the comp.sys.atari* groups when the RFD (Request For Discussion) is posted, and
again when the CFV (Call For Votes) comes around. You MUST subscribe to
news.groups to particiapte in the discussions - something that was /not/ told us
when the RFD to remove our previous binaries group was opened. This is a
nuisance, but you'll only have to carry the group for a month or so, as a 21-day
discussion period is required, and the CFV can take palce between 21 and 30 days
after posting.

If anyone else has any comments, PLEASE make them now, either here or in email.

What's the URL?

I did get in touch with the Webmaster at http://www.filez.com, and he's adding an "Atari" button to the search engine there. Very nice guy, I sent him the most common file extensions for Atari archives, and Hallvard's list of Atari ftp sites.

JP>use recommend Atari's drivers, so I would like to try those out.

IMHO you should trash that Atari stuff at once and use HDRiver from
Uwe Seimet. (wonder how you would spell that!? ;-)) That program
runs fast and reliable with all hard- and software; I'm using for
years now without any problems. Newest version ist AFAIK 5.2 - mail
Uwe for more information! --> us @ bruker.de

Aloha - a hui hou aku!

>The way I read Harry's posting, it was more a matter of trying to pre-empt
>the usual questions/comments and giving not only an explanation but also a
>"defence in advance" of some of the decisions made about the nature of the
>new mag.

Yes and your point ?.......What do you mean "more a matter" ?, more
than what?, you read Harry's posting exactly the same way as I did,
Therefore I find your comments confusing to say the least?

My comments where made because of the "defence in advance" stategy,
I have already made it as clear as day that I support and will be
subscribing to the magazine, that is not an issue, what I took offence
to was Harry pre empting that this newsgroup would not be whole
heartedly supportive, I felt that was unfair,
Harry has his opinion and he posted it, I have my opinion and
posted that, ...problems anyone ? :)

i think we should make this thread "Smile-wear" you can only add to
it if you are prepared to smile...good idea eh :)

>I wish them all the best and will be posting a cheque as soon as the bank
>balance allows

Yes thats what we are all doing ?

[lots of stuff snipped out]

The troubles that people have been having with Atari and the zip drive

could well be put down to the cable. I too had this problem and ended up spending a morning at Hisoft ("just down the road") and we came up with conclusion. Now dont get me wrong i had spent 30-40 quid on "good quality" cables but with no result. Anyway we found, in their pile of cables at Hisoft, a scsi cable that is about 15"-18" long and has VERY thick conductors inside. It came from a Mac and was the only cable that worked during the 4 hours I spent with Hisoft.
Since then is been business as usual. Smashing piece of kit with no complaints.

good luck

say, why not --

OK lets see .. i think i have a gemini 1.9999e lying around here
somewhere, plus the FAQ
OOps...seems to need serious configuration manoeuvers.

first: do i have to use mupfel.ttp as a shell??.. i kinda got used
to bash. oh well i can rewrite my few scripts...

thats if, and only if, all unix-like (ttp) progs, like vi, pppd, irc etc
can be run under gemini.

do i still need TOSWIN to start shell windows ? i vaguely understand
gemini automatically launches tos-apps in dedic. windows (with vt52
TERM id. i suppose -- is there a way to have at least vt100?)

second, do you launch gemini directly from mint.cnf or do you
have to start an aes substitute (btw: has anyone tried XaAES new beta ?
it's claimed to be faster than N.AES / and free --- couldn't ftp it though :<

third: any known probs with minixfs partitions/utilities ??

and hey mario, did ya find that pop3 client you mentionned last time ?

ok i guess thats enough for now...

thanx.a.lot.

try Da Capo. CURRENT NOTES did a review on it in the latest
issue, and the reviewer ran it with no problems on her Falcon. A big
thumbs up!

There's also CardFile4 from Gribnif; I've used it on my Falcon
for over a year now with no problems. Plus Dan Wilga is giving super
support on it - the latest patch was uploaded to his web site a few
weeks ago.

Thanks to all who have responded to this thread. The answer that most seem to agree upon, is that Stalker works just fine without HSMODA installed at all. I have confirmed this on my machine.

So, now I have two bootup configurations, with HSMODA when I want to use STIK and without when I'm using Stalker. It's a drag to have to reboot, but that's life in Atariland.

Steve Sweet (SSweet@mettav.demon.co.uk) wrote:
: I have no printing problems with TOS 306 using Speedo, GDOS or NVDI on my
: LJ5l. I do not use LDW though.

Thanks, Steve. But I think that the problem lies in LDW Power. It has special print routines since a spreadsheet usually has a lot of data formatted into columns and needs to worry about widths in order for the decimal points to line up. LDW was written with GDOS 1.1 in mind, and seems to be incompatable with the newer vector routines in Speedo. When I try to install GDOS 1.1 on my TT, I seem to have the wrong drivers or some other incompatability (setting up GDOS is a real pain!) that renders the output on my HP LaserJet 5L to one or two lines of random ascii characters.

Meanwhile, my hoary old copy of OPUS neatly bypasses all this and simply sends straight ascii to my printer which prints out using a default font resident in its own memory. Too bad. LDW looked good...

My EZ won't work with my -OLD- ICD Scsi board, but it's really ancient,
I was led to believe a while back that the EZ would work with Link I and
Link II (and I assume ADScsi Micro), you should probably double check
with ICD though... (icdinc@genie.com, i believe).

Yes, "sinclap" with a lowercase "s"- no typo...

On Wed 31-07-96 00:34, mike (mike@coconut.demon.co.uk) wrote:

>Re: SinClap
>
>Why don't we just all ignore this prat, who's obviously got such a small
>willy that he has to boast about his Big Mac!!!

Let's do just that and not waste any more time and energy on this 6 year
old (my big mac is bigger than your Atari! bwaahhh!) who's abviously got
some serious anti-social problems.

CONCLUSION:
Don't let him spoil the nice atmosphere we have in this group- I know
I've gotten a LOT of help here and gotten in touch with some very nice
people, and I believe others have experienced the same thing.

So, let's just leave him talking to himself, okay?

PS To any newcomers here: Sinclap is a troublemaker who's been here
(and in several other groups) just making trouble. No constructive or
helpful postings, just a lot of childish and irritating behaviour which has
no place in any group. So don't waste any time replying/following up his
postings.

From: Spencer@mettav.demon.co.uk
Message-ID: <16938_Spencer@mettav.demon.co.uk>
Source record: 140931

I am currently setting up a Vortex 40Mb harddrive on my old STFM so that I can run OS9 and have a question which can hopefully be answered.

Looking at the way its constructed it appears that the ISA-IDE card is rigged purely for the 40Mb IDE drive installed. Does anyone know how to setup this controller so that it will allow the use of a larger drive (say an 80Mb IDE)

Any help appreciated.

Out of the ether, the following was mentioned by andy@allatsea.demon.co.uk...:

a> Mac/PC mags wern't full of add's you might find something worth
a> reading?.....:;-))
Mac User was one of the worst mags I have ever had the misfortune to read!

Its so full of its own self worth and the "style" didn't strike me as all
that wonderful. I suppose at the time I was after a more technical
publication but MacUser is sort of like those womens magazines without any
really useful info!

Now my two all time computer magazines would be Dragon User and ST World. I
bought practically every Mac magazine available when I owned a Quadra 840av
but never found any of them to be truly useful.

But never mind I recovered, sold the Mac, and bought a TT with 21" monitor
and Matrix TC1208e graphics card with the proceeds (and still had some money
left over!)

I currently own a Falcon, TT, and a 486 PC. Must say something about my frame
of mind ;-)

Well, I grabbed AES 4.1 off an FTP site, and have it running on a TOS 1.2 MegaST2. I would like to goof with the icons, but it didn't come with a DESKICON.RSC. Also, what a good icon editor that'll work on an ST? ICONDRAW requires a 640x400x16 or so screen, not possible on an ST without a graphics card. Will it do color icons in lowres? (without a deskicon all I get are some b&w icons)

>cost in US$, and where do I get it?

AFAIK there is no demo avialable yet. I've got my copy directly from the
programmer. I think I've paid some 75 DM (bargain price) for it. The
normal price is 99 DM.
If you can read German then I strongly suggest you visite the homepage
of Overscan. It contains all the information you need. Unfortunately
the page is only in German.
http://www.overscan.com
info@overscan.com
Try to mail then. The most German do speak English.

There is also an update of N.AES (v1.1) available on their site
http://www.overscan.com/overscan/infos.html
To install the update however you need the original version.

Hope this will help you
Martin

Please send an eventually e-mail reply to the address below.

P> Any of them will work as far as cross platforms stuff goes...
P> Obviusly you need a SCSI equipped PC but cards can be bought for
P> around 40 UKP apparently and the extra load off of your processor is
P> more than worth it.
Well i allready have an Adaptec 2940 so SCSI isn't a problem.

P> Faster yes, easier to uuse-NO! The Zip is treated just like a floppy,
P> no speed up/down or levers, just an eject button and it's ready
P> almost as fast as a floppy (~0.5seconds).
Hmmm, thats interesting. No one has mentioned access speed once a cartridge is installed. I forgot that Syquests need you to operate a lever and wait for the disk to spin up. Do the new Syquests still have the exposed heads in the mechanism and how rugged is the zip offering (specifically the JAZ).

P> your data between locations often then get the Zip but if they are
P> close together and you're not woried about discontinuation get the EZ,
P> dropping an EZ cart is like dropping a hard disk, dropping a Zip is
P> like dropping a floppy.
Ok, noted. I was thinking of getting say two drives (one for the Falcon/TT and one for the PC). Anyone used BigDOS on the likes of a JAZ drive yet for cross platform compatibility?

P> Go with our guts, they are both great machines but also are very
P> different, see which one suits you then go for it.
I can't find anywhere which has both on show. In fact I haven't found anywhere that has the Syquest on show full stop!!! The one place I know that has the JAZ on show won't allow you to use it (silly little bleeders!)

Actually Katherine, I think he's talking about the Atari.WAD file, which
is playable with Doom or the clones. Andrew, I believe that you can find it
on ftp://ftp.cnam.fr/pub/Atari, http://micros.hensa.ac.uk/micros/atari.html,
or gopher://gopher.archive.merit.edu:7055/11/atari in the Falcon areas.
If, however, you cannot find it, send me email as I have it.

Sorry, I don't know who was actually being quoted here...

However, since we're talking about the Web, why should it be a require-
ment that ALL the Antic Online resources (e.g. pages) be online at ONE
site? Sure, that'd be easiest to manage, but... if worse comes to worst,
there's absolutely NOTHING to stop us from parceling the material out to
a whole BUNCH of people at MANY locations, spreading out the load to a
manageable amount for each.

Just thought I'd mention that, since nobody ever actually seems to think
of this approach. :-)

1714. Office 3.04e receive question

Newsgroup: comp.sys.atari.st
Date: 1996-08-01 00:00:00 UTC
From: Andrew@ajrose.demon.co.uk
Message-ID: <59399449_000013_OASIS_NEWS@ajrose.demon.co.uk>
Source record: 140939

I've got an X-Where 14400 fax-modem (Systems Solutions model, apparently identical to many other brands, including Frontier, etc) which seems to manage everything I throw at it except.....

....I can't get the current version of Junior Office to answer the phone to receive faxes. It works fine when I manually ask it to answer, but auto-receive doesn't work. The ringer light flashes on the modem but that's as far as it goes - it just keep flashing away to itself until I disable auto-receive and manually start the receive fax process off.

Thing is, I was thinking of getting a seperate phone line put in when cable arrives (imminently) for the computer, and would like to keep Office running in background mode to receive any faxes, rather than the current sitting-by the phone method (no use when the fax takes an hour to prepare before sending).

Any clues?

Andrew

I challenge anyone to show me a Web browser that actually works!

Oasis NOT! The scenrio goes: Dial...Freeze entire system including mouse.
CAB? Definately NOT! I get only 163 Runtime error crashes.

My Falcon cannot be used as a Web Browser! I have Set up and configured
STiK to dial my SLIP server and automatically log in even getting my Site
ID automatically. I have set up CAB (all from WWW131) and even created
00000001.htm and tried everything, but that heap-o-uselessness ain't no
WebBrowser. It does not work!! I don't have the time nor disk space to
install an entirely new OS just to have a WEB Browser.

Please, prove me wrong, show me that I don't have to buy a Mac or a PieCe
just to do WWW in graphical mode. I already have a computer with
wonderful graphics capabilities called a Falcon.

I actually got the orginial WWW release to work on one or two web pages
but it ultimately crashed too. Should I not use my Syquest 270 as the
cache disk? What do I do?

Only when you can use a JTS portible HD on an Atari ST will I really care about the company. 'sides, Atari machines are now completely the playthings of hardware hackers and shareware programmers including the 64-bit Jag. Someone found a way to program games on it using a regualr ST but I'm checking into that, if someone has more information please let me in on it. I think bedroom programmers can come up with anything better than those lazy-bone Atari executives :)

If you want a cheap, powerful model creator then you need look no
further than Tom Hudson's CyberSculpt.
CAD3D2 is best ignored for the creation of models. CyberSculpt has
spin and extrude tools like CAD3D2 but with more features and you can
manipulate the model by individual vertices and facets.
For rendering Phoenix (aka Xenomorf) v1 or 2 are much cheaper than
InShape, and doesn't require a high spec machine, but probably hasn't
got as many features.

Rich.

: g > affordable alternative. Any help would be appreciated

: try Da Capo.
: There's also CardFile4 from Gribnif;

The problem I've found with most shareware and commercial Databases for the Atari, is that they come with one set format for your data. If you, for some reason, wish to include any extra information, or would like to set up a new data field -- you can't. Da Capo looks real nice, but you cannot reconfigure it. Cardfile has the same problem, and it seems not to like having your modem hooked up to any port but MODEM 1 (at least I cannot get it to dial out).

The best I've found, for my home business purposes, is Atariworks, which lets me define the number and position of data fields, with the added bonus of letting me mailmerge information into letters and envelopes, etc.

Regards,

I checked it out and it only has a single link to the Umich archive so
it's nothing different.

Since I use the Lynx browser for downloading from FTP sites, this should
be supported in the CAB browser. But there's a STick FTP program that
should work though I like to see it take URL bypassing going through all
those folders :)

There are installation instructions in history.txt, copy it into the same
folder as CAB.

As for using it; it's pretty obvious :)

It allows you to look at the cache in a meaningful way.

Select a host, select a url. View it, copy it, delete it.

Basically, just play with it and see :)

There are some simple comm programs that can work. Be advised that with only 1200 baud modem(what the SX212 is), she can only use shell or BBS accounts and larger downloads might take a long while.

A good package to start out with is KM-Term which is a basic ANSI terminal. The problems is that it's a bit tricky to get it set up for configeration(not really hard though) and it won't work for IRC.

If you don't mind seeing only one text color on the screenm then Storm is the one to go by. She has to have it set up for VT100 emulation and Zmodem which is about the best for 1200 baud. If you want, I can send the file over e-mail or point you to where you can download it and give it to her on a 720K DOS formated disk.

As for commercial products, Stalker 3 is the best I've seen and used. See Toad Computers at http://www.toad.net/ for all the details. Hope this helps...

Hi, I just succeeded in making CAB work in SLIP connection. (Thanks to
D.Wilga).
Here is the list for the US, I hope you don't mind that I post the
whole list. But I think that a lot of people would be interested.
It works, if someone want to register, email me for deeper
information.

Primenet SLIP/PPP Configuration Sheet

DATA LINES (Up to 28.8kbps):

Phoenix, AZ (602) 395-1111
Tucson, AZ (520) 791-7777
Flagstaff, AZ (520) 773-7777
Prescott, AZ (520) 771-0101
Sierra Vista, AZ (520) 452-8888
Yuma, AZ (520) 343-1111
Wickenburg, AZ (602) 684-0000
Fresno, CA (209) 264-3333
Los Angeles, CA (818) 385-1111
Los Angeles, CA (213) 872-1000
Oceanside, CA (619) 929-9797
Pomona, CA (909) 397-8400
San Bernardino (909) 386-5700
San Diego, CA (619) 681-1111
San Juan Capistrano (714) 488-2000
Santa Ana, CA (714) 285-1111
Victorville, CA (619) 951-0511
Boise, ID (208) 375-3333
Payette, ID (208) 642-4000
Sun Valley, ID (208) 726-9898
Kansas City, MO (816) 471-4444
Minn/St. Paul,MN (612) 339-0303
El Paso, TX (915) 533-8700
Toledo, OH (419) 578-1000
Eau Claire, WI (715) 831-5555

USER IP NUMBER:
All IP Numbers are randomly picked at the time of login.

PRIMENET DOMAIN NAME SERVER (DNS):
198.68.32.10
Secondary #1: 206.42.112.10
Secondary #2: 204.245.15.10

PRIMENET GATEWAY:
198.68.32.1

Network Class/Subnet Mask:
Class C / 255.255.255.0

PRIMENET SMTP/POP HOST:
mailhost.primenet.com (Mail Directory: /var/mail)

PRIMENET NEWS SERVER (Usenet News):
news.primenet.com

PRIMENET GOPHER SERVER:
gopher.primenet.com

PRIMENET WORLD WIDE WEB SERVER:
www.primenet.com

PRIMENET IRC HOST:
irc.primenet.com

MISC:
Primenet assigns you 2 different account names. If you are using SLIP only we assign you a dialup shell account name and a SLIP account name. (ie - johndoe & Sjohndoe) The "S" represents a SLIP account. Use this for your login name to your SLIP account.

If you have a PPP account you are assigned a dialup shell account name and a PPP account name. (ie - johndoe & Pjohndoe). The "P" represents a PPP account. Use this for your login name to your PPP account.

ATTENTION INTERNET IN A BOX USERS

You will be using PPP for Internet in a Box. The following contains the information you need to fill out on the Internet Access Account Form on Page 113 of the Installation & Configuration Guide.

Service Provider Name & Phone

Primenet
602-395-1010
800-4-NET-FUN

Sign-on Information

Login Name: Pusername (Put your username/login name in place of the word "username")

Password: (this was assigned to you at the time of registration)

Additional Login Instructions: NONE

```
-------------------
Account Information
-------------------
PPP Access Phone Number: (please look at the top of this document for your
local number)

Your IP Address: 0.0.0.0 (this is randomly chosen each time you login)

Netmask: 255.255.255.0

Name Server 1: 198.68.32.10

Name Server 2: 206.42.112.10

Your Host Name: primenet

Your Domain Name: primenet.com

-------------
Email Account
-------------
Email Username: (this is the username/login name you chose, without the P)

Email Password: (same as your regular password)

POP3 Email: mailhost.primenet.com

SMTP Relay Host: mailhost.primenet.com

Email Address: username@primenet.com (Put your username/login name in
place of the word "username")

-------------------------------------
Default Internet Hosts (if available)
-------------------------------------
AIR Mosaic: http://www.primenet.com/

AIR Gopher: gopher.primenet.com

AIR News: news.primenet.com

Network File Manager: ftp.primenet.com

-------------------------------------------------------------------------
ATTENTION CHAMELEON USERS:
-------------------------------------------------------------------------
If you are using Chameleon it is recommended that you use PPP instead of SLIP.
You may still use SLIP, but it is proven to be a little slower than PPP.
Please let Primenet know which protocol you will be using PPP. In order for
Chameleon to get a random IP number assigned you must put your Internet
Address/IP Number as 1.1.1.1

Your domain name will be primenet.com and your hostname will change each time
you login, so you may put primenet.com in this field as well.

Here is a sample login script that works for Chameleon:
```

```
[PPP0]
SCRIPT=login: $u$r word: $p$r to $- -i $- ing....
TYPE=PPP

[SLIP0]
SCRIPT=login: $u$r word: $p$r to $- -i $- ing....
TYPE=SLIP

------------------------------------------------------------------------------
Thank You.
------------------------------------------------------------------------------
```

WorldNet only supports PPP connections, and only supports CHAP
protocol on top of that. In short, STiK does not fit this bill:

STiK is currently only PPP.

Sending clear-text as a login will fail, as WorldNet expects CHAP/PAP,
which is an encoded (?) scheme.

Until then...

I stand corrected! Must have been the 4xCD-ROM that came with
the 50pin centronics to 50 pin centronics cable! I know I bought one,
just forgot which piece of hardware it was for! Sorry! Shouldn't cost
more than $12.00 for one though.

I just finished updating my Atari bookmarks page at
http://www.3rdplanet.com/~starship/atari.htm - the changes are mostly to make it
easier to get around on the pages, with some cosmetic mods and a bunch of new
links (including a new section, "References," for helping you find out how to do
STuff).

There are sections for both 8-bit and TOS-based systems. Pop in and take a
look sometime!

: >
: >Atari is truly dead.
: >
: >:^(

In all fairness to Atari, a complete and just epitaph may never be
written, forever forgotten by the legion of IBM,Microsoft,Nintendo,etc
supporters. However, I will write one:

Atari

Atari was a very bold and ingenious company who provided inexpensive
video games to the masses. The innovation and bold strides made daily
reflected not only the work being done, but the people behind it. Without
Atari growing up, millions of kids would never have known the pleasures
of battling out a game of Combat or Warlords by two people in front of a
television screen.

Is was because of Atari, that milliosns upon milliosns of people grew to
love, cherish, and respect video games as a viable entertainment option.

To all those who buried Atari with their insentitive remarks in years
past, we'll now their gone. And you can no longer trash them. They're
done, but not forgotten.

So, it would be best if we all focused on what Atari did _right_, not
what they did wrong. Everybody screws up now and again. But once in a
great while, they succeed. This is what Atari was. And will forever be.

Regards,

Paul Allen Panks

: Oops, JTS is remaining on the AMEX, not the NYSE. CNNfn was in error (not
: the first time either, sheesh they have a lot of errors).

1756. FS:An ATARI safari!

Newsgroup: comp.sys.atari.st
Date: 1996-08-02 00:00:00 UTC
From: "J. Kiely Jr." <lghtchsr@tiac.net>
Message-ID: <3202BBEC.518E@tiac.net>
Source record: 140781

Hello Atariheads,

I must say I was a bit surprised to find such a busy and vocal Atari community still around on the 'net. It warms my heart.

Atari's were my intro into this wonderful world of computers. I spent 1000's of hours hunched infront of my 800XL 8-bit coding basic programs out of Byte, reading and rereading Antic magazine and poking around the innards of every accessory I bought - I even still have my Supra 300 baud modem.

For years I championed the Atari cause over the Commodore 64 and the Apple II. Those were the days, when Logo was cool and hard drives were but a fantasy...

Anyway - I loved Atari's and used them right through College. (1993) Since then, however, my machines have sat unused and untouched in the "computer room" while I slave away on Mac's and PowerMacs at the office... It's a sad reality but at least I can still
hate Intel...

I feel these machine MUST be useful to somebody so I'm offering them up for sale - all of it.

What it is - if anyone is genuinely interested in the stuff I will attempt to make a complete
listing of what I have and we can deal via personal email..

Atari Mega ST2, SC124 - b&w , SC1224 - rgb, Atari 520ST, Spectre GCR w/ROMs
2 - 3.5 single drives, I - 80MB HD with ICD card in custom case., 1 - 2400 baud modem
2 - 80col dot- matrix printers (Epson & ??), Atari 800XL 8-bit computer, 1 - 5.25 floppy drive, printer, joysticks, books, a few games, Mark Williams C language, WordWriterST word processor, DEGAS, Flash... I also have Antics from 1985 forward and STarts (with most disks) from day 1 until the end.

I really had fun with these machines but no longer get any use out of them as cool as they still are. Like I said above, I bet somebody could use 'em and they could still be productive in some way.

I have no idea what this stuff is worth (I remember saving for months to buy the Mega ST - in cash!) but I am willing to take any reasonable offer. I am local to Boston Mass. but could ship the stuff if there were some sort of safety.

I'd rather not have my folks junk the stuff as it still works great so if anyone is interested
please drop me a note...

Thanks for your time & keep the faith!

J Kiely

[deleted stuff about appallingly high German phone rates]
: But the German Telekom only has a CSLIP Connect. CSLIP isn't supported
: by STIK. STIK is the only ATARI software to use the internet.

: I am waiting for one year on the CSLIP Version of STIK. I payed in
: this Year 2880$ Telephone costs.

Ouch. However, STik is not the only way to connect. It may be the simplest for many users, but Mint and MintNet do (AFAIK) offer CSLIP. I can verify that CAB and the CAB-for-MintNet overlay work beautifully, at least with PPP.

I have one of the first of Atari 1040STF computers made.
If the computer industry goes thru a generation every 18 months
then this computer is 150 years old in human years. It occasionally
looses half its memory, the disk drive - old as the machine - no longer
reads disks properly and sometimes ruins them. We're talking a fixer
upper here. Aslo included, a 14400 Boca Mocha 32.bis modem with fax
capability, Black and White monitor, a 360K IB drive 5.25 with ten 5.25
inch floppies, 120 3.5 inch floppy disks some blank and others with
shareware on them, and comertial software like GFA Basic 3.0 and PC
Ditto. Asking $300.00 or best offer. Call (423) 928-1071 and have a
chat with my answering machine. =]

Help. I bought a NEC computer with a monster of a monitor called Moniterm
Res 1344x 1124 Its guite large. The key board is very large also and does
not look like a regular keyboard, it has keys on right and left looks kind of
like numbers set up but has things like, sys cmd,disp,queue,prey page,merge.
My question is how do you get into it. It runs diag and mem check then says
Strike F1 key to contine. But this machine does not have a F1 key it
says UDK where it should be. Can any one of you computer users help me get
in? It looks like a heck of a computer. Thanks Steve Deaver

>and PC software, and no local user groups available. Thanks for the help!

First off, forget the SX212, it's 1200 bps. She can, however, use any standard PC external modem (Supra seems to be the most compatible). I can't recall if the ST is limited to 19,200 bps for sure, but I think it is. There is a small hardware mod for STs to take them to 28,800. Get a copy of HSMODA6 and you'll be on the way. Someone else will have to help on the 'net details, though, as I haven't gotten the urge to try to hook my Falcon up through ATT Worldnet.

Dan

BTW, if anyone has hooked up with an Atari though ATT, please let me know how difficult it was, maybe I'll try it.

Annoucing Probe House Software WWW page -

http://www.geocities.com/SiliconValley/6880/phsw.html

This page is my support page for my software. You can get the
latest of my software for ST/STE/Falcon. Beta releases will
also be available at the site soon.

Current project include
* Rejoinder - an offline mail reader for QWK format.
- Beta version will support Bluewave.
* PHEM - Expense Manager.

Both software uses standard GEM interface but with 3D icons &
moveable dialogs.

About the pages : The text only version still under construction.
Can be viewed with CAB 1.3 but the java stuffs
will not work, best viewed with Netscape 3.

Give it a visit!
http://www.geocities.com/SiliconValley/6880/phsw.html

Source record: 140830
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

If you're fed up with having to write down/print URls from emails and news articles then take a look at XURL.

Just copy the article to a file and run XURL over it.

XURL extracts the URLs from the text file and creates an html document which can be loaded into CAB and clicking on the URL takes you straight to it. No more rekeying!!

XURL is FREEWARE and should run on all Ataris.

It's available from my webpage (see .sig).

Gary.

p.s. This is the second time I've sent this. The first seems to have got lost!!!

: connector and I've already got an internal scsi drive. How could I
: connect this to my system? I don't mind if the drive has to
: physically sit outside the TT, I just want to connect it somehow.

The 'standard' setup is a single internal drive and other drives connected externally to the SCSI connector on the back. For the external drive, you need a box, power supply and SCSI cable. The TT has an Apple-style 25 way SCSI connector, but it isn't too difficult to find a cable with one at one end.

I'm not sure if you can daisy chain to the internal connector. To try it, you would need :

a 50 way ribbon cable with 3 SCSI connectors
a disk drive power cable splitter

Connect the SCSI connectors to the TT, original drive and new drive (make sure the connectors are all the same way round). Connect the power cable splitter to the power socket for the original drive and connect both drives to it.

Make sure that the new drive has a different SCSI id - there should be a set of three jumpers for this on both drives. I'd guess the original drive is set to SCSI id 0, so set the new one to anything else (apart from 7 - this is the TT id with some driver software).

Power the system up and see if both drives respond - try your format program or a SCSI id test program (e.g. ICD's idcheck.prg).

The main thing I'm uncertain about is the power supply, I'm not sure the stock TT supply will survive with 2 HD's connected. Maybe it will be OK if they are both fairly new, low power consumption ones.

From: gerdw@wa.caeci.ol.ni.schule.de
Message-ID: <GHCICBVDUP@wa.caeci.ol.ni.schule.de>
Source record: 140835

Hello!

I'm using STIK and CAB for using the WWW.

Because STIK only supports SLIP, the only possibility to be connected with the WWW is an university about 50 km away from my hometown.

In Germany the telephone bills are high.
To browse one hour costs me about 16 DM (12$). 12$ for one hour WWW.

If I can use the normal German Telekom port, one hour WWW costs me about 6$.

I use the WWW for about 20 hour monthly. Now I pay for this 240$ in one month, only for the telephone bill.

If I use the German Telekom Connect, I have with all costs only a bill about 120$.

But the German Telekom only has a CSLIP Connect. CSLIP isn't supported by STIK. STIK is the only ATARI software to use the internet.

I am waiting for one year on the CSLIP Version of STIK. I payed in this Year 2880$ Telephone costs.

If STIK has an CSLIP Connect I had to pay only 1440$ last year.

WHEN WILL STIK SUPPORT CSLIP. I WILL BE RUINED, WHEN THIS WILL NOT BE HAPPEN VERY SOON.

I will much better pay the devellopers of STIK many Dollars and not the telephone Company.

Please help me
